INTRODUCTION

These requirements have been published as guidance to pilot license holders and Approved Training Organisations (ATO) to establish acceptable standards to achieve the issue, revalidation, or renewal of a flight crew license in the State of Mauritius. They are fully compliant with ICAO Annex 1 and aligned with European Standards.

The requirements are prefixed with ‘MFCL’ standing for ‘Mauritius Flight Crew License’ followed by the reference number then the topic, e.g. MFCL.305.CPL which stands for ‘Mauritius Flight Crew License 305, Commercial Pilot License’. A requirement may be further subdivided to indicate the aircraft category e.g. MFCL.625.H IR (H).

In this document, AMC has been coloured brown, whilst GM is coloured Green. An operator may propose an ‘alternative means of compliance’ which will be reviewed and assessed by the Authority. If found acceptable will be included in the document for the use of all organisations.

Also complementary to these requirements are the following DCA documents.

Instructions and procedures to examiner: Silence Skill Tests and Silence Proficiency Checks for Multi-Pilot Aeroplanes.

Procedures and guidance for Type Rating Instructor (Aeroplanes), Synthetic Flight Instructor (Aeroplanes) and Course Providers for TRI (A), SFI (A).

If there is insufficient guidance information within this document, or further amplification is sought, refer to UK CAA CAP 804 for further explanatory information.

The MCAR-FCL is issued under the provision of Regulation 135 of the Civil Aviation Regulations 2007.

I POKHUN
Ag Director of Civil Aviation
# TABLE OF CONTENTS

AMC 3 MFCL.235 Skill test 189

SECTION 1 PRE-FLIGHT OPERATIONS AND DEPARTURE 190
AMC1 MFCL.210.A PPL (A) — Experience requirements and crediting 192
AMC1 MFCL.210.H PPL (H) — Experience requirements and crediting 204
AMC1 MFCL.210.As PPL (As) — Experience requirements and crediting 221
AMC1 MFCL.205.S (b) SPL — Privileges and conditions 230
AMC1 MFCL.205.B (b) BPL — Privileges and conditions 232
AMC1 MFCL.225.B BPL — Extension of privileges to another balloon class or group 237

CHAPTER D — COMMERCIAL PILOT LICENCE — CPL 239
AMC1 MFCL.310; MFCL.515 (b); MFCL.615 (b) 239

CHAPTER F — AIRLINE TRANSPORT PILOT LICENCE — ATPL 249
AMC1 MFCL.520.A; MFCL.520.H 249

CHAPTER G — INSTRUMENT RATING — IR 250
AMC1 MFCL.615 (b) IR – Theoretical knowledge and flight instruction 250
AMC2 MFCL.615 (b) IR - Theoretical knowledge and flight instruction 251
AMC3 MFCL.615 (b) IR – Theoretical knowledge and flight instruction 272
AMC4 MFCL.615 (b) IR – Theoretical knowledge and flight instruction 278
AMC5 MFCL.615 (b) IR – Theoretical knowledge and flight instruction 284
AMC6 MFCL.615 (b) IR – Theoretical knowledge and flight instruction 291
AMC7 MFCL.615 (b) IR – Theoretical knowledge and flight instruction 316
AMC8 MFCL.615 (b) IR – Theoretical knowledge and flight instruction 341
GM1 FCL.615 (b) IR – Theoretical knowledge and flight instruction 348
AMC1 MFCL.625(c) IR — Validity, revalidation and renewal 349

CHAPTER H — CLASS AND TYPE RATINGS 350
GM1 MFCL.700 Circumstances in which class or type ratings are required 350
GM1 MFCL.710 Class and type ratings — variants Differences and familiarisation training 351
AMC2 MFCL.720.A (b) (2) (i) Experience requirements and prerequisites for the issue of class or type ratings — aeroplanes 352
AMC1 MFCL.725 (a) Requirements for the issue of class and type ratings 352
AMC2 MFCL.725 (a) Requirements for the issue of class and type ratings 372
### AMC1 MFCL.740 (b) (1) Validity and renewal of class and type ratings  
374

### AMC1 MFCL.720.A (b) (2) (i) Experience requirements and prerequisites for  
375

### AMC2 MFCL.720.A (b) (2) (i) Experience requirements and prerequisites for the issue of class or  
type ratings — aeroplanes  
377

### AMC1 MFCL.725.A (b) Theoretical knowledge and flight instruction for the issue of class and type  
ratings — aeroplanes  
379

### AMC1 MFCL.735.A; MFCL.735.H; MFCL.735.As  
383

### AMC1 MFCL.740.H (a) (3) Revalidation of type ratings — helicopters  
391

### GM1 MFCL.720.PL Experience requirements and prerequisites for the issue of type ratings —  
powered-lift aircraft  
392

#### CHAPTER I — ADDITIONAL RATINGS  
393

### AMC1 MFCL.800 Aerobatic rating  
393

### AMC1 MFCL.805 Sailplane towing and banner towing rating  
395

### AMC1 MFCL.810 (b) Night rating  
397

### AMC1 MFCL.815 Mountain rating  
400

### AMC2 MFCL.815 Mountain rating  
404

### AMC1 MFCL.820 Flight test rating  
404

### AMC1 MFCL.825 (a) En-Route instrument rating (EIR)  
411

### AMC1 MFCL.825(c) En route instrument rating (EIR)  
413

### AMC1 MFCL.825 (d) En route instrument rating (EIR)  
413

### AMC2 MFCL.825 (d) En route instrument rating (EIR)  
413

### AMC3 MFCL.825 (d) En route instrument rating (EIR)  
414

### GM1 MFCL.825 (d) En route instrument rating (EIR)  
414

### AMC1 MFCL.825 (e); (g) En route instrument rating (EIR)  
414

### AMC1 MFCL.825 (g) (2)) En route instrument rating (EIR)  
417

### AMC1 MFCL.825 (h) En route instrument rating (EIR)  
418

### AMC2 MFCL.825 (h) En route instrument rating (EIR)  
418

Dated 04 MARCH 2015
CHAPTER J — INSTRUCTORS

GM1 MFCL.900 Instructor certificates 422
AMC1 MFCL.920 Instructor competencies and assessment 424
AMC1 MFCL.925 Additional requirements for instructors for the MPL 426
AMC2 MFCL.925 (d) (1) Additional requirements for instructors for the MPL 428
GM1 MFCL.925 Additional requirements for instructors for the MPL 429
AMC1 MFCL.935 Assessment of competence 430
AMC2 MFCL.935 Assessment of competence 430
AMC3 MFCL.935 Assessment of competence 430
AMC4 MFCL.935 Assessment of competence 433
AMC5 MFCL.935 Assessment of competence 433
AMC1 MFCL.930.FI — Training course 438

A. Aeroplanes 442
EXERCISE 1: FAMILIARISATION WITH THE AEROPLANE 443
EXERCISE 2: PREPARATION FOR AND ACTION AFTER FLIGHT 444
EXERCISE 3: AIR EXPERIENCE 444
EXERCISE 4: EFFECTS OF CONTROLS 445
EXERCISE 5: TAXIING 446
EXERCISE 6: STRAIGHT AND LEVEL FLIGHT 447
EXERCISE 7: CLIMBING 448
EXERCISE 8: DESCENDING 448
EXERCISE 9: TURNING 449
EXERCISE 10a: SLOW FLIGHT 450
EXERCISE 10b: STALLING

EXERCISE 11a: SPIN RECOVERY AT THE INCIPIENT STAGE

EXERCISE 11b: SPIN RECOVERY AT THE DEVELOPED STAGE

EXERCISE 12: TAKE-OFF AND CLIMB TO DOWNWIND POSITION

EXERCISE 13: CIRCUIT, APPROACH AND LANDING

EXERCISE 14: FIRST SOLO AND CONSOLIDATION

EXERCISE 15: ADVANCED TURNING

EXERCISE 16: FORCED LANDING WITHOUT POWER

EXERCISE 17: PRECAUTIONARY LANDING

EXERCISE 18a: NAVIGATION

EXERCISE 18b: NAVIGATION AT LOWER LEVELS AND IN REDUCED VISIBILITY

EXERCISE 18c: USE OF RADIO NAVIGATION AIDS UNDER VFR

EXERCISE 19: BASIC INSTRUMENT FLIGHT

EXERCISE 20: NIGHT FLYING (if night instructional qualification required)

B. Helicopters

Exercise 1: FAMILIARISATION WITH HELICOPTER

EXERCISE 2: PREPARATION FOR AND ACTION AFTER FLIGHT

EXERCISE 3: AIR EXPERIENCE

EXERCISE 4: EFFECTS OF CONTROLS

EXERCISE 5: POWER AND ATTITUDE CHANGES

EXERCISE 6: LEVEL FLIGHT, CLIMBING, DESCENDING AND TURNING

EXERCISE 7: AUTOROTATION

EXERCISE 8: HOVERING AND HOVER TAXIING

EXERCISE 9: TAKE-OFF AND LANDING

EXERCISE 10: TRANSITIONS FROM HOVER TO CLIMB AND APPROACH TO HOVER
EXERCISE 11: CIRCUIT, APPROACH AND LANDING 481
EXERCISE 12: FIRST SOLO 482
EXERCISE 13: SIDEWAYS AND BACKWARDS HOVER MANOEUVRING 483
EXERCISE 14: SPOT TURNS 483
EXERCISE 15: HOVER OUT OF GROUND EFFECT AND VORTEX RING 484
EXERCISE 16: SIMULATED ENGINE OFF LANDINGS 484
EXERCISE 17: ADVANCED AUTOROTATIONS 485
EXERCISE 18: PRACTICE FORCED LANDINGS 486
EXERCISE 19: STEEP TURNS 486
EXERCISE 20: TRANSITIONS 487
EXERCISE 21: QUICK STOPS 487
EXERCISE 22: NAVIGATION 488
EXERCISE 23: ADVANCED TAKE-OFF, LANDINGS AND TRANSITIONS 492
EXERCISE 24: SLOPING GROUND 493
EXERCISE 25: LIMITED POWER 494
EXERCISE 26: CONFINED AREAS 494
EXERCISE 27: BASIC INSTRUMENT FLIGHT 495
EXERCISE 28: NIGHT FLYING (if night instructional qualification required) 496
C. Airships 497
EXERCISE 1: FAMILIARISATION WITH THE AIRSHIP 499
EXERCISE 2: PREPARATION FOR AND ACTION AFTER FLIGHT 499
EXERCISE 3: AIR EXPERIENCE 500
EXERCISE 4: EFFECTS OF CONTROLS 500
EXERCISE 5: GROUND MANOEUVERING 500
EXERCISE 6: TAKE-OFF PROCEDURES 501

CHAPTER A
— GENERAL REQUIREMENTS

**GM1 MFCL.005 Scope**

**INTERPRETATIVE MATERIAL**

(a) Whenever licenses, ratings, approvals or certificates are mentioned in MFCL, these are meant to be valid licenses, ratings, approvals or certificates issued in accordance with MFCL. In all other cases, these documents are specified.

(b) Whenever ‘or’ is used as an inclusive ‘or’, it should be understood in the sense of ‘and/or’.

**GM1 MFCL.010 Definitions**

**ABBREVIATIONS**

The following abbreviations apply to the Acceptable Means of Compliance and Guidance Material to MFCL:

- **A** Aeroplane
- **AC** Alternating Current
- **ACAS** Airborne Collision Avoidance System
- **ADF** Automatic Direction Finding
- **ADS** Aeronautical Design Standard
- **AFCS** Automatic Flight Control System
- **AFM** Aircraft Flight Manual
- **AGL** Above Ground Level
- **AIC** Aeronautical Information Circular
- **AIP** Aeronautical Information Publication
- **AIRAC** Aeronautical Information regulation and control
- **AIS** Aeronautical Information Services
- **AMC** Acceptable Means of Compliance
- **AeMC** Aero-medical Centre
- **AME** Aero-medical Examiner
- **AOM** Aircraft Operating Manual

AMC1 MFCL.015  Application and issue of licenses, ratings and certificates

APPLICATION AND REPORT FORMS

Common application and report forms can be found:

(a) For skill tests, proficiency checks for issue, revalidation or renewal of LAPL, BPL, SPL, PPL, CPL and IR in AMC1 to Appendix 7.

(b) For training, skill tests or proficiency checks for ATPL, MPL and class and type ratings, in AMC1 to Appendix 9.

(c) For assessments of competence for instructors, in AMC5 MFCL.935.

AMC1 MFCL.025  Theoretical knowledge examinations for the issue of licenses

TERMINOLOGY

The meaning of the following terms used in MFCL.025 should be as follows:

(a) 'Entire set of examinations': an examination in all subjects required by the license level.

(b) 'Examination': the demonstration of knowledge in one or more examination papers.

(c) 'Examination paper': a set of questions to be answered by a candidate for examination.

(d) 'Attempt': a try to pass a specific paper.

(e) 'Sitting': a period of time established by the Authority within which a candidate can take an examination. This period should not exceed 10 consecutive days. Only one attempt at each examination paper is allowed in one sitting.

AMC1 MFCL.050  Recording of flight time

GENERAL

(a) The record of the flights flown should contain at least the following information:

(1) personal details: name(s) and address of the pilot;

(2) for each flight:

   (i) name(s) of PIC;

   (ii) date of flight;

   (iii) place and time of departure and arrival;

   (iv) type, including make, model and variant, and registration of the aircraft;
(v) indication if the aircraft is SE or ME, if applicable;
(vi) total time of flight;
(vii) accumulated total time of flight.

(3) for each FSTD session, if applicable:
(i) type and qualification number of the training device;
(ii) FSTD instruction;
(iii) date;
(iv) total time of session;
(v) accumulated total time.

(4) details on pilot function, namely PIC, including solo, SPIC and PICUS time, co-pilot, dual, FI or FE;

(5) Operational conditions, namely if the operation takes place at night, or is conducted under instrument flight rules.

(b) Logging of time:

(1) PIC flight time:
(i) the holder of a license may log as PIC time all of the flight time during which he or she is the PIC;
(ii) the applicant for or the holder of a pilot license may log as PIC time all solo flight time, flight time as SPIC and flight time under supervision provided that such SPIC time and flight time under supervision are countersigned by the instructor;
(iii) the holder of an instructor certificate may log as PIC all flight time during which he or she acts as an instructor in an aircraft;
(iv) the holder of an examiner’s certificate may log as PIC all flight time during which he or she occupies a pilot’s seat and acts as an examiner in an aircraft;
(v) a co-pilot acting as PICUS on an aircraft on which more than one pilot is required under the type certification of the aircraft or as required by operational requirements provided that such PICUS time is countersigned by the PIC;
(vi) if the holder of a license carries out a number of flights upon the same day returning on each occasion to the same place of departure and the interval between
successive flights does not exceed 30 minutes, such series of flights may be recorded as a single entry.

(2) co-pilot flight time: the holder of a pilot license occupying a pilot seat as co-pilot may log all flight time as co-pilot flight time on an aircraft on which more than one pilot is required under the type certification of the aircraft, or the regulations under which the flight is conducted;

(3) cruise relief co-pilot flight time: a cruise relief co-pilot may log all flight time as co-pilot when occupying a pilot’s seat;

(4) instruction time: a summary of all time logged by an applicant for a license or rating as flight instruction, instrument flight instruction, instrument ground time, etc., may be logged if certified by the appropriately rated or authorised instructor from whom it was received;

(5) PICUS flight time: provided that the method of supervision is acceptable to the Authority, a co-pilot may log as PIC flight time flown as PICUS when all the duties and functions of PIC on that flight were carried out in such a way that the intervention of the PIC in the interest of safety was not required.

(c) Format of the record:

(1) details of flights flown under commercial air transport may be recorded in a computerised format maintained by the operator. In this case an operator should make the records of all flights operated by the pilot, including differences and familiarisation training, available upon request to the flight crew member concerned;

(2) for other types of flight, the pilot should record the details of the flights flown in the following logbook format. For sailplanes and balloons, a suitable format should be used that contains the relevant items mentioned in (a) and additional information specific to the type of operation.

PILOT’S SIGNATURE
INSTRUCTIONS FOR USE

(d) MFCL.050 requires holders of a pilot license to record details of all flights flown. This logbook enables pilot license holders to record flying experience in a manner which will facilitate this process while providing a permanent record of the license holders flying. Pilots who fly regularly aeroplanes and helicopters or other aircraft categories are recommended to maintain separate logbooks for each aircraft category.

(e) Flight crew logbook entries should be made as soon as practicable after any flight undertaken. All entries in the logbook should be made in ink or indelible pencil.

(f) The particulars of every flight in the course of which the holder of a flight crew license acts as a member of the operating crew of an aircraft are to be recorded in the appropriate columns using one line for each flight, provided that if an aircraft carries out a number of flights upon the same day returning on each occasion to the same place of departure and the interval between successive flights does not exceed 30 minutes, such series of flights may be recorded as a single entry.

(g) Flight time is recorded:

1. for aeroplanes, touring motor gliders and powered-lift aircraft, from the moment an aircraft first moves to taking off until the moment it finally comes to rest at the end of the flight;

2. for helicopters, from the moment a helicopter’s rotor blades start turning until the moment the helicopter finally comes to rest at the end of the flight, and the rotor blades are stopped;

3. for airships, from the moment an airship is released from the mast to taking off until the moment the airship finally comes to rest at the end of the flight, and is secured on the mast;

(h) When an aircraft carries two or more pilots as members of the operating crew, one of them shall, before the flight commences, be designated by the operator as the aircraft PIC, according to operational requirements, who may delegate the conduct of the flight to another suitably qualified pilot. All flying carried out as PIC is entered in the logbook as ‘PIC’. A pilot flying as ‘PICUS’ or ‘SPIC’ enters flying time as ‘PIC’ but all such entries are to be certified by the PIC or FI in the ‘Remarks’ column of the logbook.

(i) Notes on recording of flight time:

1. column 1: enter the date (dd/mm/yy) on which the flight commences;

2. column 2 or 3: enter the place of departure and destination either in full or the internationally recognised three or four letter designator. All times should be in UTC;

3. column 5: indicate whether the operation was SP or MP, and for SP operation whether SE or ME;
Example:

</tbody>
</table>
(4) column 6: total time of flight may be entered in hours and minutes or decimal notation as desired;

(5) column 7: enter the name(s) of PIC or SELF as appropriate;

(6) column 8: indicate the number of landings as pilot flying by day or night;

(7) column 9: enter flight time undertaken at night or under instrument flight rules if applicable;

(8) column 10: pilot function time:
   (i) enter flight time as PIC, SPIC and PICUS as PIC;
   (ii) all time recorded as SPIC or PICUS is countersigned by the aircraft PIC/FI in the ‘remarks’ (column 12);
   (iii) instructor time should be recorded as appropriate and also entered as PIC.

(9) column 11: FSTD:
   (i) for any FSTD enter the type of aircraft and qualification number of the device. For other flight training devices enter either FNPT I or FNPT II as appropriate;
   (ii) total time of session includes all exercises carried out in the device, including pre- and after-flight checks;
   (iii) enter the type of exercise performed in the ‘remarks’ (column 12), for example operator proficiency check, revalidation.

(10) column 12: the ‘remarks’ column may be used to record details of the flight at the holder’s discretion. The following entries, however, should always be made:
   (i) instrument flight time undertaken as part of the training for a license or rating;
   (ii) details of all skill tests and proficiency checks;
   (iii) signature of PIC if the pilot is recording flight time as SPIC or PICUS;
   (iv) signature of instructor if flight is part of an SEP or TMG class rating revalidation.

(j) When each page is completed, accumulated flight time or hours should be entered in the appropriate columns and certified by the pilot in the ‘remarks’ column.

AMC1 MFCL.055 Language proficiency

GENERAL

(a) The language proficiency assessment should be designed to reflect a range of tasks undertaken by pilots but with specific focus on language rather than operational procedures.

(b) The assessment should determine the applicant’s ability to:

(1) communicate effectively using standard R/T phraseology;

(2) deliver and understand messages in plain language in both usual and unusual situations that necessitate departure from standard R/T phraseology.

ASSESSMENT

(c) The assessment may be subdivided into three elements, as follows:

(1) listening: assessment of comprehension;

(2) speaking: assessment of pronunciation, fluency, structure and vocabulary;

(3) interaction.

(d) The three elements mentioned above may be combined and they can be covered by using a wide variety of means or technologies.

(e) Where appropriate, some or all of these elements may be achieved through the use of the R/T testing arrangements.

(f) When the elements of the testing are assessed separately, the final assessment should be consolidated in the language proficiency endorsement issued by the Authority.

(g) The assessment may be conducted during one of the several existing checking or training activities, such as license issue or rating issue and revalidation, line training, operator line checks or proficiency checks.

(h) The Authority may use its own resources in developing or conducting the language proficiency assessment, or may delegate this task to language assessment bodies.

(i) The Authority should establish an appeal procedure for applicants.

(j) The holder of a license should receive a statement containing the level and validity of the language endorsements.
(k) Where the assessment method for the English language established by the Authority is equivalent to that established for the assessment of use of the English language in accordance with AMC2 MFCL.055, the same assessment may be used for both purposes.

BASIC ASSESSMENT REQUIREMENTS

(l) The aim of the assessment is to determine the ability of an applicant for a pilot license or a license holder to speak and understand the language used for R/T communications.

(1) The assessment should determine the ability of the applicant to use both:

(i) standard R/T phraseology;

(ii) plain language, in situations when standardised phraseology cannot serve an intended transmission.

(2) The assessment should include:

(i) voice-only or face-to-face situations;

(ii) common, concrete and work-related topics for pilots.

(3) The applicants should demonstrate their linguistic ability in dealing with an unexpected turn of events, and in solving apparent misunderstandings.

(4) The assessment should determine the applicant’s speaking and listening abilities. Indirect assessments, of grammatical knowledge, reading and writing, are not appropriate.

(5) The assessment should determine the language skills of the applicant in the following areas:

(i) pronunciation:

(A) the extent to which the pronunciation, stress, rhythm and intonation are influenced by the applicant’s first language or national variations;

(B) how much they interfere with ease of understanding.

(ii) structure:

(A) the ability of the applicant to use both basic and complex grammatical structures;

(B) the extent to which the applicant’s errors interfere with the meaning.

(iii) vocabulary:

(a) the range and accuracy of the vocabulary used;
(b) the ability of the applicant to paraphrase successfully when lacking vocabulary.

(iv) fluency:
(A) tempo;
(B) hesitancy;
(C) rehearsed versus spontaneous speech;
(D) use of discourse markers and connectors.

(v) comprehension:
(A) on common, concrete and work-related topics;
(B) when confronted with a linguistic or situational complication or an unexpected turn of events.

Note: the accent or variety of accents used in the test material should be sufficiently intelligible for an international community of users.

(vi) interactions:
(A) quality of response (immediate, appropriate, and informative);
(B) the ability to initiate and maintain exchanges:
   (a) on common, concrete and work-related topics;
   (b) when dealing with an unexpected turn of events.
(C) the ability to deal with apparent misunderstandings by checking, confirming or clarifying.

Note: the assessment of the language skills in the areas mentioned above is conducted using the rating scale in AMC2 MFCL.055.

(6) When the assessment is not conducted in a face-to-face situation, it should use appropriate technologies for the assessment of the applicant’s abilities in listening and speaking, and for enabling interactions (for example: simulated pilot or controller communication).

ASSESSORS

(m) It is essential that the persons responsible for language proficiency assessment (‘assessors’) are suitably trained and qualified. They should be either aviation specialists (for example current or former flight crew members or air traffic controllers), or language specialists with additional aviation-related training. An alternative approach would be to form an assessment team
consisting of an operational expert and a language expert.

(1) The assessors should be trained on the specific requirements of the assessment.

(2) The assessors should not test applicants to whom they have given language training.

CRITERIA FOR THE ACCEPTABILITY OF LANGUAGE ASSESSMENT BODIES

(n) To ensure an impartial assessment process, the language assessment should be independent of the language training.

(1) To be accepted, the language assessment bodies should demonstrate:

(i) appropriate management and staffing;

(ii) quality system established and maintained to ensure compliance with, and adequacy of, assessment requirements, standards and procedures.

(2) The quality system established by a language assessment body should address the following:

(i) management;

(ii) policy and strategy;

(iii) processes;

(iv) the relevant provisions of ICAO or Part-MFCL, standards and assessment procedures;

(v) organisational structure;

(vi) responsibility for the development, establishment and management of the quality system;

(vii) documentation;

(viii) quality assurance programme;

(ix) human resources and training (initial and recurrent);

(x) assessment requirements;

(xi) customer satisfaction.

(3) The assessment documentation and records should be kept for a period of time determined by the Authority and made available to this Authority, on request.

(4) The assessment documentation should include at least the following:
(i) assessment objectives;

(ii) assessment layout, time scale, technologies used, assessment samples, voice samples;

(iii) assessment criteria and standards (at least for the levels 4, 5 and 6 of the rating scale mentioned in AMC2 MFCL.055);

(iv) documentation demonstrating the assessment validity, relevance and reliability;

(v) assessment procedures and responsibilities:

(A) preparation of individual assessment;

(B) administration: location(s), identity check and invigilation, assessment discipline, confidentiality or security;

(C) reporting and documentation provided to the Authority or to the applicant, including sample certificate;

(D) retention of documents and records.

Note: refer to the 'Manual on the Implementation of ICAO Language Proficiency Requirements' (ICAO Doc 9835) for further guidance.
**AMC2 MFCL.055 Language proficiency**

**RATING SCALE**

The following table describes the different levels of language proficiency:

Note: operational Level (Level 4) is the minimum required proficiency level for R/T communication.

Levels 1 through 3 describe pre-elementary, elementary and pre-operational levels of language proficiency respectively, all of which describe a level below the language proficiency requirement.

Levels 5 and 6 describe extended and expert levels at levels of proficiency more advanced than the minimum required standard.
AMC3 MFCL.055 Language proficiency

SPECIFIC REQUIREMENTS FOR HOLDERS OF AN IR USE OF ENGLISH LANGUAGE

(a) The requirement of MFCL.055(d) includes the ability to use the English language for the following purposes:

(1) flight: R/T relevant to all phases of flight, including emergency situations.

(2) ground: all information relevant to the accomplishment of a flight:

(i) be able to read and demonstrate an understanding of technical manuals written in English, for example an operations manual, a helicopter flight manual, etc.;

(ii) pre-flight planning, weather information collection, NOTAMs, ATC flight plan, etc.;

(iii) use of all aeronautical en-route, departure and approach charts and associated documents written in English.

(3) communication: be able to communicate with other crew members in English during all phases of flight, including flight preparation.

(b) Alternatively, the items in (a) above may be demonstrated:

(1) by having passed a specific examination given by the Authority after having undertaken a course of training enabling the applicant to meet all the objectives listed in (a) above; or

(2) the item in (a)(1) above is considered to be fulfilled, if the applicant has passed an IR, MPL or ATPL skill test and proficiency check during which the two-way R/T communication is performed in English;

(3) the item in (a)(2) above is considered to be fulfilled if the applicant has graduated from an IR, MPL or ATP course given in English or if he or she has passed the theoretical IR or ATPL examination in English;

(4) the item in (a)(3) above is considered to be fulfilled, if the applicant for or the holder of an IR has graduated from an MCC course given in English and is holding a certificate of satisfactory completion of that course or if the applicant has passed a MP skill test and proficiency check for the issue of a class or type rating during which the two-way R/T communication and the communication with other crew members are performed in English.

(c) Where the examination methods referred to above are equivalent to those established for the language proficiency requirements in accordance with AMC1 MFCL.055, the examination may be used to issue a language proficiency endorsement.
AMC1 MFCL.060 (b) (1) Recent experience

When a pilot needs to carry out one or more flights with an instructor or an examiner to comply with the requirement of MFCL.060(b)(1) before the pilot can carry passengers, the instructor or examiner on board those flights will not be considered as a passenger.

**GM1 MFCL.060 (b) (1) Recent experience**

AEROPLANES, HELICOPTERS, POWERED-LIFT, AIRSHIPS AND SAILPLANES

If a pilot or a PIC is operating under the supervision of an instructor to comply with the required three take-offs, approaches and landings, no passengers may be on board.

**AMC1 MFCL.060 (b) (5) Recent experience**

NON-COMPLEX HELICOPTERS

Grouping of non-complex helicopters with similar handling and operational characteristics:

(a) Group 1: Bell 206/206L, Bell 407;

(b) Group 2: Hughes 369, MD 500N, MD 520N, MD 600;

(c) Group 3: SA 341/342, EC 120;

(d) Group 4: SA 313/318, SA 315/316/319, AS 350, EC 130;

(e) Group 5: all types listed in AMC1 MFCL.740.H (a) (3) and R 22 and R 44.
CHAPTER B — LIGHT AIRCRAFT PILOT LICENCE — LAPL

AMC1 MFCL.115; MFCL.120

SYLLABUS OF THEORETICAL KNOWLEDGE FOR THE LAPL

(a) The training and examination should cover aspects related to non-technical skills in an integrated manner, taking into account the particular risks associated with the license and the activity. The theoretical knowledge instruction provided by the ATO should include a certain element of formal classroom work but may also include other methods of delivery for example interactive video, slide or tape presentation, computer-based training and other media distance learning courses. The training organisation responsible for the training has to check if all the appropriate elements of the training course of theoretical knowledge instruction have been completed to a satisfactory standard before recommending the applicant for the examination.

(b) The following tables contain the syllabi for the courses of theoretical knowledge, as well as for the theoretical knowledge examinations for the LAPL (B) and LAPL(S). The syllabi for the theoretical knowledge instruction and examination for the PPL (A) and PPL (H) in AMC1 MFCL.210 and MFCL.215 should be used for the LAPL (A) and the LAPL (H), respectively.

**AMC1 MFCL.120; MFCL.125**

THEORETICAL KNOWLEDGE EXAMINATION AND SKILL TEST FOR THE LAPL
DEPARTMENT OF CIVIL AVIATION
MFCL ACCEPTABLE MEANS OF COMPLIANCE AND GUIDANCE MATERIAL

(a) Theoretical knowledge examination

(1) The examinations should be in written form and should comprise a total of 120 multiple-choice questions covering all the subjects.

(2) For the subject 'communication' practical classroom testing may be conducted.

(3) The examinations will be conducted in English.

(b) Skill test

Further training may be required following any failed skill test or part thereof. There should be no limit to the number of skill tests that may be attempted.

(c) Conduct of the test

(1) If the applicant chooses to terminate a skill test for reasons considered inadequate by the FE, the applicant should retake the entire skill test. If the test is terminated for reasons considered adequate by the FE, only those sections not completed should be tested in a further flight.

(2) Any manoeuvre or procedure of the test may be repeated once by the applicant. The FE may stop the test at any stage if it is considered that the applicant’s demonstration of flying skill requires a complete retest.

(3) An applicant should be required to fly the aircraft from a position where the PIC functions can be performed and to carry out the test as if there is no other crew member. Responsibility for the flight should be allocated in accordance with national regulations.

AMC1 MFCL.125 LAPL — Skill test

CONTENTS OF THE SKILL TEST FOR THE ISSUE OF A LAPL (A)

(a) The route to be flown for the skill test should be chosen by the FE. The route should end at the aerodrome of departure or at another aerodrome. The applicant should be responsible for the flight planning and should ensure that all equipment and documentation for the execution of the flight are on board. The navigation section of the test should have a duration of at least 30 minutes which allows the pilot to demonstrate his/her ability to complete a route with at least two identified waypoints and may, as agreed between applicant and FE, be flown as a separate test.

(b) An applicant should indicate to the FE the checks and duties carried out, including the identification of radio facilities. Checks should be completed in accordance with the flight manual or the authorised checklist for the aeroplane or TMG on which the test is being taken. During pre-flight preparation for the test the applicant should be required to determine power settings and speeds. Performance data for take-off, approach and landing should be calculated by the applicant in compliance with the
FLIGHT TEST TOLERANCE

(c) The applicant should demonstrate the ability to:

(1) operate the aeroplane or TMG within its limitations;
(2) complete all manoeuvres with smoothness and accuracy;
(3) exercise good manoeuvre and airmanship;
(4) apply aeronautical knowledge;
(5) maintain control of the aeroplane or TMG at all times in such a manner that the successful outcome of a procedure or manoeuvre is never seriously in doubt.

(d) The following limits are for general guidance. The FE should make allowance for turbulent conditions and the handling qualities and performance of the aeroplane or TMG used:

(1) height:
   normal flight ± 150 ft.
(2) speed:
   (i) take-off and approach +15/-5 knots
   (ii) all other flight regimes ± 15 knots

CONTENT OF THE SKILL TEST

(e) The skill test contents and sections set out in this AMC should be used for the skill test for the issue of a LAPL(A):

<table>

</tr>
</tbody>
</table>

*These items may be combined, at the discretion of the FE.*
AMC2 MFCL.125 LAPL — Skill test

CONTENTS OF THE SKILL TEST FOR THE ISSUE OF A LAPL (H)

(a) The area and route to be flown for the skill test should be chosen by the FE. The route should end at the aerodrome of departure or at another aerodrome. The applicant should be responsible for the flight planning and should ensure that all equipment and documentation for the execution of the flight are on board. The navigation section of the test should consist of at least two legs, each leg of a minimum duration of 10 minutes. The skill test may be conducted in two flights.

(b) An applicant should indicate to the FE the checks and duties carried out, including the identification of radio facilities. Checks should be completed in accordance with the flight manual or the authorised checklist or pilot operating handbook for the helicopter on which the test is being taken. During pre-flight preparation for the test the applicant should be required to determine power settings and speeds. Performance data for take-off, approach and landing should be calculated by the applicant in compliance with the operations manual or flight manual for the helicopter used.

FLIGHT TEST TOLERANCE

(c) The applicant should demonstrate the ability to:

(1) operate the helicopter within its limitations;

(2) complete all manoeuvres with smoothness and accuracy;

(3) exercise good judgment and airmanship;

(4) apply aeronautical knowledge;

(5) maintain control of the helicopter at all times in such a manner that the successful outcome of a procedure or manoeuvre is never seriously in doubt.

(d) The following limits are for general guidance. The FE should make allowance for turbulent conditions and the handling qualities and performance of the helicopter used:

(1) height:

   (i) normal forward flight ± 150 ft.

   (ii) with simulated major emergency ± 200 ft.

   (iii) entering IGE flight ± 2 ft.

(2) speed:

   (i) take-off approach +15 knots / -10 knots

   (ii) all other flight regimes ± 15 knots
(3) **round drift:**

(i) **take-off hover IGE** ± 3 ft.

(ii) **landing** no sideways or backwards movement

**CONTENT OF THE SKILL TEST**

(e) The skill test contents and sections set out in this AMC should be used for the skill test for the issue of a LAPL(H):

<table>
<thead>
<tr>

**SECTION 5 ABNORMAL AND EMERGENCY PROCEDURES (SIMULATED WHERE APPROPRIATE)**

Note: The FE selects 4 items from the following:

| a | Engine malfunctions, including governor failure, carburettor or engine icing and oil system, as appropriate |
| b | Fuel system malfunction |
| c | Electrical system malfunction |
| d | Hydraulic system malfunction, including approach and landing without hydraulics, as applicable |
| e | Main rotor or anti-torque system malfunction (FFS or discussion only) |
| f | Fire drills, including smoke control and removal, as applicable |
| g | Other abnormal and emergency procedures as outlined in appropriate flight manual |
AMC1 MFCL.125; MFCL.235

CONTENTS OF THE SKILL TEST FOR THE ISSUE OF A LAPL(S) AND OF AN SPL

(a) An applicant should be responsible for the flight planning and should ensure that all equipment and documentation for the execution of the flight are on board.

(b) The applicant should indicate to the FE the checks and duties carried out. Checks should be completed in accordance with the flight manual or the authorised checklist for the sailplane on which the test is being taken.

FLIGHT TEST TOLERANCE

(c) The applicant should demonstrate the ability to:

(1) operate the sailplane within its limitations;

(2) complete all manoeuvres with smoothness and accuracy;

(3) exercise good judgment and airmanship;

(4) apply aeronautical knowledge;

(5) maintain control of the sailplane at all times in such a manner that the successful outcome of a procedure or manoeuvre is never seriously in doubt.

CONTENT OF THE SKILL TEST

(d) The skill test contents and sections set out in this AMC should be used for the skill test for the issue of a LAPL(S) and of an SPL:

<table>
<thead>
<tr>
<th>SECTION 1 PRE-FLIGHT OPERATIONS AND DEPARTURE</th>
</tr>
</thead>

**AMC2 MFCL.125; MFCL.235**

**CONTENTS OF THE SKILL TEST FOR THE ISSUE OF A LAPL (B) AND A BPL**

(a) The take-off site should be chosen by the applicant depending on the actual meteorological conditions, the area which has to be over flown and the possible options for suitable landing sites. The applicant should be responsible for the flight planning and should ensure that all equipment and documentation for the execution of the flight are on board.

(b) An applicant should indicate to the FE the checks and duties carried out. Checks should be completed in accordance with the flight manual or the authorised checklist for the balloon on which the test is being taken. During pre-flight preparation for the test the applicant should be required to perform crew and passenger briefings and demonstrate crowd control. The load calculation should be performed by the applicant in compliance with the operations manual or flight manual for the balloon used.

**FLIGHT TEST TOLERANCE**

(c) The applicant should demonstrate the ability to:

1. operate the balloon within its limitations;
2. complete all manoeuvres with smoothness and accuracy
3. exercise good judgment and airmanship;
(4) apply aeronautical knowledge;

(5) maintain control of the balloon at all times in such a manner that the successful outcome of a procedure or manoeuvre is never seriously in doubt.

**CONTENT OF THE SKILL TEST**

(d) The skill test contents and sections set out in this paragraph should be used for the skill test for the issue of a LAPL(B) (hot-air balloon) and a BPL (hot-air balloon):

### SECTION 1 PRE-FLIGHT OPERATIONS, INFLATION AND TAKE-OFF

Use of checklist, airmanship, control of balloon by external visual reference, look-out procedures, etc. apply in all sections.

**AMC1 MFCL.110.A LAPL (A) — Experience requirements and crediting**

**FLIGHT INSTRUCTION FOR THE LAPL (A)**

(a) **Entry to training**

Before being accepted for training an applicant should be informed that the appropriate medical certificate must be obtained before solo flying is permitted.

(b) **Flight instruction**

(1) The LAPL (A) flight instruction syllabus should take into account the principles of threat and error management and also cover:

   (i) pre-flight operations, including mass and balance determination, aircraft inspection and servicing;

   (ii) aerodrome and traffic pattern operations, collision avoidance precautions and procedures;

   (iii) control of the aircraft by external visual reference;

   (iv) flight at critically low air speeds, recognition of, and recovery from, incipient and full stalls;

   (v) flight at critically high air speeds, recognition of, and recovery from, spiral dive;

   (vi) normal and crosswind take-offs and landings;
(vii) maximum performance (short field and obstacle clearance) take-offs, short-field landings;

(viii) cross-country flying using visual reference, dead reckoning and radio navigation aids;

(ix) emergency operations, including simulated aeroplane equipment malfunctions;

(x) operations to, from and transiting controlled aerodromes, compliance with air traffic services procedures and communication procedures.

(2) Before allowing the applicant to undertake his/her first solo flight, the FI should ensure that the applicant can operate the required systems and equipment.

(c) Syllabus of flight instruction

(1) The numbering of exercises should be used primarily as an exercise reference list and as a broad instructional sequencing guide; therefore the demonstrations and practices need not necessarily be given in the order listed. The actual order and content will depend upon the following interrelated factors:

(i) the applicant’s progress and ability;

(ii) the weather conditions affecting the flight;

(iii) the flight time available;

(iv) instructional technique considerations;

(v) the local operating environment;

(vi) applicability of the exercises to the aeroplane or TMG type.

(2) Each of the exercises involves the need for the applicant to be aware of the needs of good airmanship and look-out, which should be emphasised at all times.

(i) Exercise 1a: Familiarisation with the aeroplane or TMG:

(A) characteristics of the aeroplane or TMG;

(B) cockpit layout;

(C) systems;

(D) checklists, drills and controls.

(ii) Exercise 1b: Emergency drills:

(A) action if fire on the ground and in the air;
(B) engine cabin and electrical system fire;
(C) systems failure;
(D) escape drills, location and use of emergency equipment and exits.

(iii) Exercise 2: Preparation for and action after flight:

(A) flight authorisation and aeroplane or TMG acceptance;
(B) serviceability documents;
(C) equipment required, maps, etc.;
(D) external checks;
(E) internal checks;
(F) harness, seat or rudder panel adjustments;
(G) starting and warm-up checks;
(H) power checks;
(I) running down system checks and switching off the engine;
(J) parking, security and picketing (for example tie down);
(K) completion of authorization sheet and serviceability documents.

(iv) Exercise 3: Air experience: flight exercise.

(v) Exercise 4: Effects of controls:

(A) primary effects when laterally level and when banked;
(B) further effects of aileron and rudder;
(C) effects of:
   (a) air speed;
   (b) slipstream;
   (c) power;
   (d) trimming controls;
   (e) flaps;
(f) other controls, as applicable.

(D) operation of:
  (a) mixture control;
  (b) carburettor heat;
  (c) cabin heating or ventilation.

(vi) Exercise 5a: Taxiing:
  (A) pre-taxi checks;
  (B) starting, control of speed and stopping;
  (C) engine handling;
  (D) control of direction and turning;
  (E) turning in confined spaces;
  (F) parking area procedure and precautions;
  (G) effects of wind and use of flying controls;
  (H) effects of ground surface;
  (I) freedom of rudder movement;
  (J) marshalling signals;
  (K) instrument checks;
  (L) air traffic control procedures.

(vii) Exercise 5b: Emergencies: brake and steering failure.

(viii) Exercise 6: Straight and level:
  (A) at normal cruising power, attaining and maintaining straight and level flight;
  (B) flight at critically high air speeds;
  (C) demonstration of inherent stability;
  (D) control in pitch, including use of trim;
  (E) lateral level, direction and balance, trim;
  (F) at selected air speeds (use of power);
  (G) during speed and configuration changes;
(H) use of instruments for precision.

(ix) Exercise 7: Climbing:

(A) entry, maintaining the normal and max rate climb, levelling off;
(B) levelling off at selected altitudes;
(C) en-route climb (cruise climb);
(D) climbing with flap down;
(E) recovery to normal climb;
(F) maximum angle of climb;
(G) use of instruments for precision.

(x) Exercise 8: Descending:

(A) entry, maintaining and levelling off;
(B) levelling off at selected altitudes;
(C) glide, powered and cruise descent (including effect of power and air speed);
(D) side slipping (on suitable types);
(E) use of instruments for precision flight.

(xi) Exercise 9: Turning:

(A) entry and maintaining medium level turns;
(B) resuming straight flight;
(C) faults in the turn (in correct pitch, bank and balance);
(D) climbing turns;
(E) descending turns;
(F) slipping turns (for suitable types);
(G) turns onto selected headings, use of gyro heading indicator and compass;
(H) use of instruments for precision.

(xii) Exercise 10a: Slow flight:
Note: the objective is to improve the student’s ability to recognise inadvertent flight at critically low speeds and provide practice in maintaining the aeroplane or TMG in balance while returning to normal air speed.

(A) safety checks;
(B) introduction to slow flight;
(C) controlled flight down to critically slow air speed;
(D) application of full power with correct attitude and balance to achieve normal climb speed.

(xiii) Exercise 10b: Stalling:

(A) safety checks;
(B) symptoms;
(C) recognition;
(D) clean stall and recovery without power and with power;
(E) recovery when a wing drops;
(F) approach to stall in the approach and in the landing configurations, with and without power and recovery at the incipient stage.

(xiv) Exercise 11: Spin avoidance:

(A) safety checks;
(B) stalling and recovery at the incipient spin stage (stall with excessive wing drop, about 45°);
(C) instructor induced distractions during the stall.

(xv) Exercise 12: Take-off and climb to downwind position:

(A) pre-take-off checks;
(B) into wind take-off;
(C) safeguarding the nose wheel (if applicable);
(D) crosswind take-off;
(E) drills during and after take-off;
(F) short take-off and soft field procedure or techniques
including performance calculations;

(G) noise abatement procedures.

(xvi) Exercise 13: Circuit, approach and landing:

(A) circuit procedures, downwind and base leg;
(B) powered approach and landing;
(C) safeguarding the nose wheel (if applicable);
(D) effect of wind on approach and touchdown speeds and use of flaps;
(E) crosswind approach and landing;
(F) glide approach and landing;
(G) short landing and soft field procedures or techniques;
(H) flapless approach and landing;
(I) wheel landing (tail wheel aeroplanes);
(J) missed approach and go-around;
(K) noise abatement procedures.

(xvii) Exercise 12/13: Emergencies:

(A) abandoned take-off;
(B) engine failure after take-off;
(C) mislanding and go-around;
(D) missed approach.

Note: in the interests of safety, it will be necessary for pilots trained on nose wheel aeroplanes or TMGs to undergo dual conversion training before flying tail wheel aeroplanes or TMGs, and vice versa.

(xviii) Exercise 14: First solo:

(A) instructor’s briefing including limitations;
(B) use of required equipment;
(C) observation of flight and de-briefing by instructor.

Note: during flights immediately following the solo circuit consolidation the following should be revised:
(A) procedures for leaving and rejoining the circuit;
(B) the local area, restrictions, map reading;
(C) use of radio aids for homing;
(D) turns using magnetic compass, compass errors.

(xix) Exercise 15: Advanced turning:

(A) steep turns (45 °), level and descending;
(B) stalling in the turn and recovery;
(C) recoveries from unusual attitudes, including spiral dives.

(xx) Exercise 16: Forced landing without power:

(A) forced landing procedure;
(B) choice of landing area, provision for change of plan;
(C) gliding distance;
(D) descent plan;
(E) key positions;
(F) engine cooling;
(G) engine failure checks;
(H) use of radio;
(I) base leg;
(J) final approach;
(K) landing;
(L) actions after landing.

(xx) Exercise 17: Precautionary landing:

(A) full procedure away from aerodrome to break-off height;
(B) occasions necessitating a precautionary landing;
(C) in-flight conditions;
(D) landing area selection:
   (a) normal aerodrome;
(b) disused aerodrome;

(c) ordinary field.

(E) circuit and approach;

(F) actions after landing.

(xxii) Exercise 18a: Navigation:

(A) flight planning:

(a) weather forecast and actuals;

(b) map selection and preparation:

(1) choice of route;

(2) airspace structure;

(3) safety altitudes.

(c) calculations:

(1) magnetic heading(s) and time(s) en-route;

(2) fuel consumption;

(3) mass and balance;

(4) mass and performance.

(d) flight information:

(1) NOTAMs, etc.;

(2) radio frequencies;

(3) selection of alternate aerodromes.

(e) aeroplane or TMG documentation;

(f) notification of the flight:

(1) pre-flight administrative procedures;

(2) flight plan form.

(B) departure:

(a) organisation of cockpit workload;

(b) departure procedures:
(1) altimeter settings;
(2) ATC liaison in regulated airspace;
(3) setting heading procedure;
(4) noting of ETAs.
(c) maintenance of altitude and heading;
(d) revisions of ETA and heading;
(e) log keeping;
(f) use of radio;
(g) minimum weather conditions for continuation of flight;
(h) in-flight decisions;
(i) transiting controlled or regulated airspace;
(j) diversion procedures;
(k) uncertainty of position procedure;
(l) lost procedure.

(C) arrival and aerodrome joining procedure:
(a) ATC liaison in regulated airspace;
(b) altimeter setting;
(c) entering the traffic pattern;
(d) circuit procedures;
(e) parking;
(f) security of aeroplane or TMG;
(g) refueling;
(h) closing of flight plan, if appropriate;
(i) post-flight administrative procedures.

(xxiii) Exercise 18b: Navigation problems at lower levels and in reduced visibility:

(xxiv) Exercise 18c: Radio navigation (basics):
(A) use of GNSS or VOR/ADF:
   (a) selection of waypoints or stations;
   (b) to or from indications and orientation;
   (c) error messages.

(B) use of VHF/DF:
   (a) availability, AIP and frequencies;
   (b) R/T procedures and ATC liaison;
   (c) obtaining a QDM and homing.

(C) use of en-route or terminal radar:
   (a) availability and AIP;
   (b) procedures and ATC liaison;
   (c) pilot’s responsibilities;
   (d) secondary surveillance radar:
      (1) transponders;
      (2) code selection;
      (3) interrogation and reply.

(xxv) Exercise 19: Stopping and restarting the engine (in the case of TMGs only):
   (A) engine cooling;
   (B) switching-off procedure;
   (C) restarting of the engine.

AMC2 MFCL.110.A  LAPL (A) — Experience requirements and crediting

CREDITING: PRE-ENTRY FLIGHT TEST

The pre-entry flight test referred to in MFCL.110.A(c) should cover the total content of the syllabus of flight instruction for the issuance of the LAPL (A), in accordance with AMCI MFCL.110.A.

GM1 MFCL.135.A; MFCL.135.H

DIFFERENCES AND FAMILIARISATION TRAINING

(a) Differences training requires the acquisition of additional knowledge and
training on an appropriate training device or the aircraft.

(b) Familiarisation training requires the acquisition of additional knowledge.

**AMC1 MFCL.110.H LAPL (H) — Experience requirements and creditng**

**FLIGHT INSTRUCTION FOR THE LAPL (H)**

(a) Entry to training

Before being accepted for training an applicant should be informed that the appropriate medical certificate must be obtained before solo flying is permitted.

(b) Flight instruction

(1) The LAPL(H) flight instruction syllabus should take into account the principles of threat and error management and also cover:

(i) pre-flight operations, including mass and balance determination, helicopter inspection and servicing;

(ii) aerodrome and traffic pattern operations, collision avoidance precautions and procedures;

(iii) control of the helicopter by external visual reference;

(iv) take-offs, landings, hovering, look-out turns and normal transitions from and to the hover;

(v) emergency procedures, basic autorotations, simulated engine failure and ground resonance recovery if relevant to type;

(vi) sideways and backwards flight and turns on the spot;

(vii) incipient vortex ring recognition and recovery;

(viii) touchdown autorotations, simulated engine-off landings, practice forced landings. Simulated equipment malfunctions and emergency procedures relating to malfunctions of engines, controls, electrical and hydraulic circuits;

(ix) steep turns;

(x) transitions, quick stops, out of wind manoeuvres, sloping ground landings and take-offs;

(xi) limited power and confined area operations including selection of and operations to and from unprepared sites;

(xii) cross-country flying by using visual reference, dead reckoning and, where available and radio navigation aids;

(xiii) operations to and from aerodromes; compliance with air traffic services procedures and communication procedures.
(2) Before allowing the applicant to undertake his/her first solo flight, the FI should ensure that the applicant can operate the required systems and equipment.

(c) Syllabus of flight instruction

(1) The numbering of exercises should be used primarily as an exercise reference list and as a broad instructional sequencing guide; therefore the demonstrations and practices need not necessarily be given in the order listed. The actual order and content will depend upon the following interrelated factors:

(i) the applicant’s progress and ability;

(ii) the weather conditions affecting the flight;

(iii) the flight time available;

(iv) instructional technique considerations;

(v) the local operating environment;

(vi) applicability of the exercises to the helicopter type.

(2) Each of the exercises involves the need for the applicant to be aware of the needs of good airmanship and look-out, which should be emphasised at all times.

(i) Exercise 1a: Familiarisation with the helicopter:

(A) characteristics of the helicopter, external features;

(B) cockpit layout;

(C) systems;

(D) checklists, procedures, controls.

(ii) Exercise 1b: Emergency procedures:

(A) action if fire on the ground and in the air;

(B) engine, cabin and electrical system fire;

(C) systems failures;

(D) escape drills, location and use of emergency equipment and exits.

(iii) Exercise 2: Preparation for and action after flight:

(A) flight authorisation and helicopter acceptance;

(B) serviceability documents;
(C) equipment required, maps, etc.;

(D) external checks;

(E) internal checks;

(F) seat, harness and flight controls adjustments;

(G) starting and warm-up checks clutch engagement and starting rotors;

(H) power checks;

(I) running down system checks and switching off the engine;

(J) parking, security and picketing;

(K) completion of authorisation sheet and serviceability documents.

(iv) Exercise 3: Air experience:

(A) to introduce the student to rotary wing flight;

(B) flight exercise.

(v) Exercise 4: Effects of controls:

(A) function of flight controls, primary and secondary effect;

(B) effect of air speed;

(C) effect of power changes (torque);

(D) effect of yaw (sideslip);

(E) effect of disc loading (bank and flare);

(F) effect on controls of selecting hydraulics on/off;

(G) effect of control friction;

(H) instruments;

(I) use of carburettor heat or anti-icing control.

(vi) Exercise 5: Power and attitude changes:

(A) relationship between cyclic control position, disc attitude, fuselage attitude and air speed;

(B) flapback;
(C) power required diagram in relation to air speed;
(D) power and air speed changes in level flight;
(E) use of instruments for precision;
(F) engine and air speed limitations.

(vii) Exercise 6a: Straight and level:
(A) at normal cruising power, attaining and maintaining straight and level flight;
(B) control in pitch, including use of control friction or trim;
(C) maintaining direction and balance, (ball or yaw string use);
(D) setting power for selected air speeds and speed changes;
(E) use of instruments for precision.

(viii) Exercise 6b: Climbing:
(A) optimum climb speed, best angle or rate of climb from power required diagram;
(B) initiation, maintaining the normal and maximum rate of climb, levelling off;
(C) levelling off at selected altitudes or heights;
(D) use of instruments for precision.

(ix) Exercise 6c: Descending:
(A) optimum descent speed and best angle or rate of descent from power required diagram;
(B) initiation, maintaining and levelling off;
(C) levelling off at selected altitudes or heights;
(D) descent (including effect of power and air speed);
(E) use of instruments for precision.

(x) Exercise 6d: Turning:
(A) initiation and maintaining medium level turns;
(B) resuming straight flight;
(C) altitude, bank and coordination;
(D) climbing and descending turns and effect on rate of climb or descent;

(E) turns onto selected headings, use of gyro heading indicator and compass;

(F) use of instruments for precision.

(xi) Exercise 7: Basic autorotation:

(A) safety checks, verbal warning and look-out;

(B) entry, development and characteristics;

(C) control of air speed and RRPM, rotor and engine limitations;

(D) effect of AUM, IAS, disc loading, G-forces and density altitude

(E) re-engagement and go-around procedures (throttle over-ride or ERPM control);

(F) vortex condition during recovery;

(G) gentle and medium turns in autorotation;

(H) demonstration of variable flare simulated engine off landing.

(xii) Exercise 8a: Hovering:

(A) demonstrate hover IGE, importance of wind effect and attitude, ground cushion, stability in the hover, effects of over controlling;

(B) student holding cyclic stick only;

(C) student handling collective lever (and throttle) only;

(D) student handling collective lever, (throttle) and pedals;

(E) student handling all controls;

(F) demonstration of ground effect;

(G) demonstration of wind effect;

(H) demonstrate gentle forward running touchdown;

(I) specific hazards, for example snow, dust and litter.

(xiii) Exercise 8b: Hover taxiing and spot turns:
(A) revise hovering;
(B) precise ground speed and height control;
(C) effect of wind direction on helicopter attitude and control margin;
(D) control and coordination during spot turns;
(E) carefully introduce gentle forward running touchdown.

(xiv) Exercise 8c: Hovering and taxiing emergencies:

(A) revise hovering and gentle forward running touchdown, explain (demonstrate where applicable) effect of hydraulics failure in the hover;
(B) demonstrate simulated engine failure in the hover and hover taxi.
(C) demonstrate dangers of mishandling and over-pitching.

(xv) Exercise 9: Take-off and landing

(A) pre-take-off checks or drills;
(B) look-out;
(C) lifting to hover;
(D) after take-off checks;
(E) danger of horizontal movement near ground;
(F) danger of mishandling and overpitching;
(G) landing (without sideways or backwards movement);
(H) after landing checks or drills;
(I) take-off and landing crosswind and downwind.

(xvi) Exercise 10: Transitions from hover to climb and approach to hover:

(A) look-out;
(B) revise take-off and landing;
(C) ground effect, translational lift and its effects;
(D) flapback and its effects;
(E) effect of wind speed and direction during transitions from or to the hover;

(F) the constant angle approach;

(G) demonstration of variable flare simulated engine off landing.

(xvii) Exercise 11a: Circuit, approach and landing:

(A) revise transitions from hover to climb and approach to hover;

(B) circuit procedures, downwind and base leg;

(C) approach and landing with power;

(D) pre-landing checks;

(E) effect of wind on approach and IGE hover

(F) crosswind approach and landing;

(G) go-around;

(H) noise abatement procedures.

(viii) Exercise 11b: Steep and limited power approaches and landings:

(A) revise the constant angle approach;

(B) the steep approach (explain danger of high sink rate and low air speed);

(C) limited power approach (explain danger of high speed at touch down);

(D) use of the ground effect;

(E) variable flare simulated engine off landing.

(xix) Exercise 11c: Emergency procedures:

(A) abandoned take-off;

(B) missed approach and go-around;

(C) hydraulic off landing (if applicable);

(D) tail rotor control or tail rotor drive failure (briefing only);

(E) simulated emergencies in the circuit to include:

(F) hydraulics failure;
(G) simulated engine failure on take-off, crosswind, downwind and base leg;

(H) governor failure.

(xx) Exercise 12: First solo:

(A) instructor’s briefing, observation of flight and debriefing;

(B) warn of change of attitude from reduced and laterally displaced weight;

(C) warn of low tail, low skid or wheel during hover and landing;

(D) warn of dangers of loss of RRPM and overpitching;

(E) pre-take-off checks;

(F) into wind take-off;

(G) procedures during and after take-off;

(H) normal circuit, approaches and landings;

(I) action if an emergency.

(xx) Exercise 13: Sideways and backwards hover manoeuvring:

(A) manoeuvring sideways flight heading into wind;

(B) manoeuvring backwards flight heading into wind;

(C) combination of sideways and backwards manoeuvring;

(D) manoeuvring sideways and backwards, heading out of wind;

(E) stability and weather cocking;

(F) recovery from backwards manoeuvring, (pitch nose down);

(G) groundspeed limitations for sideways and backwards manoeuvring.

(xx) Exercise 14: Spot turns:

(A) revise hovering into wind and downwind;

(B) turn on spot through 360°:

(a) around pilots position;

(b) around tail rotor;
(c) around helicopter geometric centre;

(d) square and safe visibility clearing turn.

(C) rotor RPM control, torque effect, cyclic limiting stops due to CG position and wind speed and direction.

(xxiii) Exercise 15: Hover OGE and vortex ring:

(A) establishing hover OGE;

(B) drift, height or power control;

(C) demonstration of incipient stage of vortex ring, recognition and recovery (from a safe altitude);

(D) loss of tail rotor effectiveness.

(xxiv) Exercise 16: Simulated EOL:

(A) the effect of weight, disc loading, density attitude and RRPM decay;

(B) revise basic autorotation entry;

(C) optimum use of cyclic and collective to control speed or RRPM;

(D) variable flare simulated EOL;

(E) demonstrate constant attitude simulated EOL;

(F) demonstrate simulated EOL from hover or hover taxi;

(G) demonstrate simulated EOL from transition and low level.

(xxv) Exercise 17: Advanced autorotation:

(A) over a selected point at various height and speed;

(B) revise basic autorotation: note ground distance covered;

(C) range autorotation;

(D) low speed autorotation;

(E) constant attitude autorotation (terminate at safe altitude);

(F) ‘S’ turns;

(G) turns through 180° and 360°;
(H) effects on angles of descent, IAS, RRPM and effect of AUM.

Exercise 18: Practice forced landings:

(A) procedure and choice of the forced landing area;

(B) forced landing checks and crash action;

(C) re-engagement and go-around procedures.

Exercise 19: Steep turns:

(A) steep (level) turns (30° bank);

(B) maximum rate turns (45° bank if possible);

(C) steep autorotative turns;

(D) faults in the turn: balance, attitude, bank and coordination;

(E) RRPM control and disc loading;

(F) vibration and control feedback;

(G) effect of wind at low level.

Exercise 20: Transitions:

(A) revise ground effect, translational lift and flapback;

(B) maintaining constant height, (20–30 ft. AGL):

(C) transition from hover to minimum 50 knots IAS and back to hover;

(D) demonstrate effect of wind.

Exercise 21: Quick stops:

(A) use of power and controls;

(B) effect of wind;

(C) quick stops into wind;

(D) quick stops from crosswind and downwind terminating into wind;

(E) danger of vortex ring;

(F) danger of high disc loading.

Exercise 22a: Navigation:
(A) Flight planning:

(a) weather forecast and actuals;

(b) map selection and preparation and use:

(1) choice of route;

(2) controlled airspace, danger and prohibited areas;

(3) safety altitudes and noise abatement considerations.

(c) calculations:

(1) magnetic heading(s) and time(s) en-route;

(2) fuel consumption;

(3) mass and balance.

(d) flight information:

(1) NOTAMs, etc.;

(2) radio frequencies;

(3) selection of alternate landing sites.

(e) helicopter documentation;

(f) notification of the flight:

(1) pre-flight administrative procedures;

(2) flight plan form (where appropriate).

(B) Departure:

(a) organisation of cockpit workload;

(b) departure procedures:

(1) altimeter settings;

(2) ATC liaison in regulated airspace;

(3) setting heading procedure;

(4) noting of ETAs.
(c) maintenance of height or altitude and heading;
(d) revisions of ETA and heading:
    (1) 10° line, double track, track error and closing angle;
    (2) 1 in 60 rule;
    (3) amending an ETA.
(e) log keeping;
(f) use of radio;
(g) minimum weather conditions for continuation of flight;
(h) in-flight decisions;
(i) transiting controlled or regulated airspace;
(j) uncertainty of position procedure;
(k) lost procedure.

(C) Arrival and aerodrome joining procedure:
(a) ATC liaison in regulated airspace;
(b) altimeter setting;
(c) entering the traffic pattern;
(d) circuit procedures;
(e) parking;
(f) security of helicopter;
(g) refueling;
(h) closing of flight plan, (if appropriate);
(i) post-flight administrative procedures.

(xxxi) Exercise 22b: Navigation problems at low heights and in reduced visibility:

(A) actions before descending;
(B) hazards (for example obstacles and other aircraft);
(C) difficulties of map reading;
(D) effects of wind and turbulence;

(E) avoidance of noise sensitive areas;

(F) joining the circuit;

(G) bad weather circuit and landing;

(H) appropriate procedures and choice of landing area for precautionary landings.

(xxxii) Exercise 22c: Radio navigation (basics):

(A) Use of GNNS or VOR/NDB:
   (a) selection of waypoints;
   (b) to or from indications or orientation;
   (c) error messages.

(B) Use of VHF/DF:
   (a) availability, AIP and frequencies;
   (b) R/T procedures and ATC liaison;
   (c) obtaining a QDM and homing.

(C) Use of en-route or terminal radar:
   (a) availability and AIP;
   (b) procedures and ATC liaison;
   (c) pilot’s responsibilities;
   (d) secondary surveillance radar:
      (1) transponders;
      (2) code selection;
      (3) interrogation and reply.

(xxxiii) Exercise 23: Advanced take-off, landings and transitions:

(A) landing and take-off out of wind (performance reduction);

(B) ground effect, translational lift and directional stability variation when out of wind;
(C) downwind transitions;
(D) vertical take-off over obstacles;
(E) reconnaissance of landing site;
(F) running landing;
(G) zero speed landing;
(H) crosswind and downwind landings;
(I) steep approach;
(J) go-around.

(xxxiv) Exercise 24: Sloping ground:
(A) limitations and assessing slope angle;
(B) wind and slope relationship: blade and control stops;
(C) effect of CG when on slope;
(D) ground effect on slope and power required;
(E) right skid up slope;
(F) left skid up slope;
(G) nose up slope;
(H) avoidance of dynamic roll over, dangers soft ground and sideways movement on touchdown;
(I) danger of striking main or tail rotor by harsh control movement near ground.

(xxxv) Exercise 25: Limited power:
(A) take-off power check;
(B) vertical take-off over obstacles;
(C) in-flight power check;
(D) running landing;
(E) zero speed landing;
(F) approach to low hover;
(G) approach to hover;
(H) approach to hover OGE;

(I) steep approach;

(J) go-around.

(***vi) Exercise 26: Confined areas:

(A) landing capability and performance assessment;

(B) locating landing site and assessing wind speed and direction;

(C) reconnaissance of landing site;

(D) select markers;

(E) select direction and type of approach;

(F) circuit;

(G) approach to committed point and go-around;

(H) approach;

(I) clearing turn;

(J) landing;

(K) power check and performance assessment in and OGE;

(L) normal take-off to best angle of climb speed;

(M) vertical take-off from hover.

**AMC2 MFCL.110.H LAPL (H) — Experience requirements and crediting**

CREDITING: PRE-ENTRY FLIGHT TEST

The pre-entry flight test referred to in MFCL.110.H (b) should cover the total content of the syllabus of flight instruction for the issuance of the LAPL (H), in accordance with AMCI MFCL.110.H.

**AMC1 MFCL.110.S LAPL(S) — Experience requirements and crediting**

CREDITING: PRE-ENTRY FLIGHT TEST

The pre-entry flight test referred to in MFCL.110.S(c) should cover the total content of the syllabus of flight instruction for the issuance of the LAPL(S), in accordance with AMCI MFCL.110.S and MFCL.210.S.

**AMC1 MFCL.110.S; MFCL.210.S**
FLIGHT INSTRUCTION FOR THE LAPL(S) AND THE SPL

(a) Entry to training
Before being accepted for training an applicant should be informed that the appropriate medical certificate must be obtained before solo flying is permitted.

(b) Flight instruction

(1) The LAPL (S) and SPL flight instruction syllabus should take into account the principles of threat and error management and also cover:

(i) pre-flight operations, including verifying mass and balance, aircraft inspection and servicing, airspace and weather briefing;

(ii) aerodrome and traffic pattern operations, collision avoidance precautions and procedures;

(iii) control of the aircraft by external visual reference;

(iv) flight at high angle of attack (critically low air speeds), recognition of, and recovery from, incipient and full stalls and spins;

(v) flight at critically high air speeds, recognition of, and recovery from spiral dive;

(vi) normal and crosswind take-offs in respect with the different launch methods;

(vii) normal and crosswind landings;

(viii) short field landings and outlandings: field selection, circuit and landing hazards and precautions;

(ix) cross-country flying using visual reference, dead reckoning and available navigation aids;

(x) soaring techniques as appropriate to site conditions;

(xi) emergency actions;

(xii) compliance with air traffic services procedures and communication procedures.

(2) Before allowing the applicant to undertake his/her first solo flight, the FI should ensure that the applicant can operate the required systems and equipment.

(c) Syllabus of flight instruction

(1) The numbering of exercises should be used primarily as an exercise reference list and as a broad instructional sequencing guide; therefore the demonstrations and practices need not necessarily be given in the order listed. The actual order and content will depend upon the following.
interrelated factors:

(i) the applicant’s progress and ability;
(ii) the weather conditions affecting the flight;
(iii) the flight time available;
(iv) instructional technique considerations;
(v) the local operating environment;
(vi) applicability of the exercises to the sailplane type.

(2) At the discretion of the instructors some of the exercises may be combined and some other exercises may be done in several flights.

(3) At least the exercises 1 to 12 have to be completed before the first solo flight.

(4) Each of the exercises involves the need for the applicant to be aware of the needs for good airmanship and look-out, which should be emphasised at all times.

(i) Exercise 1: Familiarisation with the sailplane:

(A) characteristics of the sailplane;
(B) cockpit layout: instruments and equipment;
(C) light controls: stick, pedals, airbrakes, flaps and trim;
(D) cable release and undercarriage;
(E) checklists, drills and controls.

(ii) Exercise 2: Procedures if emergencies:

(A) use of safety equipment (parachute);
(B) action if system failures;
(C) bail-out procedures.

(iii) Exercise 3: Preparation for flight:

(A) pre-flight briefings;
(B) required documents on board;
(C) equipment required for the intended flight;
(D) ground handling, movements, tow out, parking
and security;

(E) pre-flight external and internal checks;

(F) verifying in-limits mass and balance;

(G) harness, seat or rudder panel adjustments;

(H) passenger handling;

(I) pre-launch checks.

(iv) Exercise 4: Initial air experience:

(A) area familiarisation;

(B) look-out procedures.

(v) Exercise 5: Effects of controls:

(A) look-out procedures;

(B) use of visual references;

(C) primary effects when laterally level and when banked;

(D) reference attitude and effect of elevator;

(E) relationship between attitude and speed;

(F) effects of:

(a) flaps (if available);

(b) airbrakes.

(vi) Exercise 6: Coordinated rolling to and from moderate angles of bank:

(A) look-out procedures;

(B) further effects of aileron (adverse yaw) and rudder (roll);

(C) coordination;

(D) rolling to and from moderate angles of bank and return to straight flight.

(vii) Exercise 7: Straight flying:

(A) look-out procedures;

(B) maintaining straight flight;
DEPARTMENT OF CIVIL AVIATION
MFCL ACCEPTABLE MEANS OF COMPLIANCE AND GUIDANCE MATERIAL

(C) flight at critically high air speeds;
(D) demonstration of inherent pitch stability;
(E) control in pitch, including use of trim;
(F) lateral level, direction and balance and trim;
(G) air speed: instrument monitoring and control.

(viii) Exercise 8: Turning:
(A) look-out procedures;
(B) demonstration and correction of adverse yaw;
(C) entry to turn (medium level turns);
(D) stabilising turns;
(E) exiting turns;
(F) faults in the turn (slipping and skidding);
(G) turns on to selected headings and use of compass;
(H) use of instruments (ball indicator or slip string) for precision.

(ix) Exercise 9a: Slow flight:

Note: the objective is to improve the student’s ability to recognise inadvertent flight at critically low speeds (high angle of attack) and to provide practice in maintaining the sailplane in balance while returning to normal attitude (speed).

(A) safety checks;
(B) introduction to characteristics of slow flight;
(C) controlled flight down to critically high angle of attack (slow air speed).

(x) Exercise 9b: Stalling:

(A) safety checks;
(B) pre-stall symptoms, recognition and recovery;
(C) stall symptoms, recognition and recovery;
(D) recovery when a wing drops;
(E) approach to stall in the approach and in the landing configurations;

(F) recognition and recovery from accelerated stalls.

(xii) Exercise 10: Spin recognition and spin avoidance:

(A) safety checks;

(B) stalling and recovery at the incipient spin stage (stall with excessive wing drop, about 45°);

(C) entry into fully developed spins (if suitable training aircraft available);

(D) recognition of full spins (if suitable training aircraft available);

(E) standard spin recovery (if suitable training aircraft available);

(F) Instructor induced distractions during the spin entry (if suitable training aircraft available).

Note: consideration of man oeuvre limitations and the need to refer to the sailplane manual and mass and balance calculations. If no suitable training aircraft is available to demonstrate the fully developed spin, all the aspects related to these training items have to be covered by specific theoretical instruction.

(xii) Exercise 11: Take-off or launch methods:

At least one launch method must be taught containing all the subjects below.

(xiii) Exercise 11a: Winch launch:

(A) signals or communication before and during launch;

(B) use of the launching equipment;

(C) pre-take-off checks;

(D) into wind take-off;

(E) crosswind take-off;

(F) optimum profile of winch launch and limitations;

(G) release procedures;

(H) launch failure procedures.

(xiv) Exercise 11b: Aero tow:
(A) signals or communication before and during launch;
(B) use of the launch equipment;
(C) pre-take-off checks;
(D) into wind take-off;
(E) crosswind take-off;
(F) on tow: straight flight, turning and slip stream;
(G) out of position in tow and recovery;
(H) descending on tow (towing aircraft and sailplane);
(I) release procedures;
(J) launch failure and abandonment.

(xv) Exercise 11c: Self-launch:
(A) engine extending and retraction procedures;
(B) engine starting and safety precautions;
(C) pre-take-off checks;
(D) noise abatement procedures;
(E) checks during and after take-off;
(F) into wind take-off;
(G) crosswind take-off;
(H) power failures and procedures;
(I) abandoned take-off;
(J) maximum performance (short field and obstacle clearance) take-off;
(K) short take-off and soft field procedure or techniques and performance calculations.

(xvi) Exercise 11d: Car launch:
(A) signals before and during launch;
(B) use of the launch equipment;
(C) pre-take-off checks;
(D) into wind take-off;
(E) crosswind take-off;
(F) optimum launch profile and limitations;
(G) release procedures;
(H) launch failure procedures.

(xvii) exercise 11e: Bungee launch:
(A) signals before and during launch;
(B) use of the launch equipment;
(C) pre-take-off checks;
(D) into wind take-off.

(xviii) exercise 12: Circuit, approach and landing:
(A) procedures for rejoining the circuit;
(B) collision avoidance, look-out techniques and procedures;
(C) pre-landing checks: circuit procedures, downwind and base leg;
(D) effect of wind on approach and touchdown speeds;
(E) use of flaps (if applicable);
(F) visualisation of an aiming point;
(G) approach control and use of airbrakes;
(H) normal and crosswind approach and landing;
(I) short landing procedures or techniques.

(xix) Exercise 13: First solo:
(A) instructor’s briefing including limitations;
(B) awareness of local area and restrictions;
(C) use of required equipment;
(D) observation of flight and debriefing by instructor.
(xx) Exercise 14: Advanced turning:
   (A) steep turns (45°);
   (B) stalling and spin avoidance in the turn and recovery;
   (C) recoveries from unusual attitudes, including spiral dives.

(xxi) Exercise 15: Soaring techniques:
   At least one of the three soaring techniques must be taught containing all subjects below.

(xxii) Exercise 15a: Thermalling:
   (A) look-out procedures;
   (B) detection and recognition of thermals;
   (C) use of audio soaring instruments;
   (D) joining a thermal and giving way;
   (E) flying in close proximity to other sailplanes;
   (F) centring in thermals;
   (G) leaving thermals.

(xxiii) Exercise 15b: Ridge flying:
   (A) look-out procedures;
   (B) practical application of ridge flying rules;
   (C) optimisation of flight path;
   (D) speed control.

(xxiv) Exercise 15C: Wave flying:
   (A) look-out procedures;
   (B) wave access techniques;
   (C) speed limitations with increasing height;
   (D) use of oxygen.

(xxv) Exercise 16: Out-landings:
   (A) gliding range;
   (B) restart procedures (only for self-launching and self-
sustaining sailplanes);

(C) selection of landing area;

(D) circuit judgement and key positions;

(E) circuit and approach procedures;

(F) actions after landing.

(xxvi) Exercise 17: Cross-country flying:

If the required cross-country flight will be conducted as a solo cross-country flight, all the subjects below must be taught before.

(xxvii) Exercise 17a: Flight planning:

(A) weather forecast and actuals;

(B) NOTAMs and airspace considerations;

(C) map selection and preparation;

(D) route planning;

(E) radio frequencies (if applicable);

(F) pre-flight administrative procedure;

(G) flight plan where required;

(H) mass and performance;

(I) alternate aerodromes and landing areas;

(J) safety altitudes.

(xxviii) Exercise 17b: In-flight navigation:

(A) maintaining track and re-routing considerations;

(B) use of radio and phraseology (if applicable);

(C) in-flight planning;

(D) procedures for transiting regulated airspace or ATC liaison where required;

(E) uncertainty of position procedure;

(F) lost procedure;

(G) use of additional equipment where required;
(H) joining, arrival and circuit procedures at remote aerodrome.

(xix) Exercise 17c: Cross-country techniques:
   (A) look-out procedures;
   (B) maximising potential cross-country performance;
   (C) risk reduction and threat reaction.

AMC1 MFCL.135.S; MFCL.205.S (a)

EXTENSION OF PRIVILEGES TO TMG: LAPL(S) AND SPL

(a) The aim of the flight training is to qualify LAPL(S) or SPL holders to exercise the privileges of the license on a TMG.

(b) The ATO should issue a certificate of satisfactory completion of the training.

(c) Theoretical knowledge

The theoretical knowledge syllabus should cover the revision or explanation of:

(1) Principles of flight:
   (i) operating limitations (addition TMG);
   (ii) propellers;
   (iii) flight mechanics.

(2) Operational procedures for TMG:
   (i) special operational procedures and hazards;
   (ii) emergency procedures.

(3) Flight performance and planning:
   (i) mass and balance considerations;
   (ii) loading;
   (iii) CG calculation;
   (iv) load and trim sheet;
   (v) performance of TMGs;
   (vi) flight planning for VFR flights;
   (vii) fuel planning;
(viii) pre-flight preparation;
(ix) ICAO flight plan;
(x) flight monitoring and in-flight re-planning.

(4) Aircraft general knowledge:
(i) system designs, loads, stresses, maintenance;
(ii) airframe;
(iii) landing gear, wheels, tyres, brakes;
(iv) fuel system;
(v) electrics;
(vi) piston engines;
(vii) propellers;
(viii) instrument and indication systems.

(5) Navigation:
(i) dead reckoning navigation (addition powered flying elements);
(ii) in-flight navigation (addition powered flying elements);
(iii) basic radio propagation theory;
(iv) radio aids (basics);
(v) radar (basics);
(vi) GNSS.

(6) Flight instruction

The numbering of exercises should be used primarily as an exercise reference list and as a broad instructional sequencing guide; therefore the demonstrations and practices need not necessarily be given in the order listed.

(7) The flying exercises should cover the revision or explanation of the following exercises:

(i) Exercise 1: Familiarisation with the TMG:
   (A) characteristics of the TMG;
(B) cockpit layout;
(C) systems;
(D) checklists, drills and controls.

(ii) Exercise 1e: Emergency drills:
(A) action if fire on the ground and in the air;
(B) engine cabin and electrical system fire;
(C) systems failure;
(D) escape drills, location and use of emergency equipment and exits.

(iii) Exercise 2: Preparation for and action after flight:
(A) serviceability documents;
(B) equipment required, maps, etc.;
(C) external checks;
(D) internal checks;
(E) harness and seat or rudder panel adjustments;
(F) starting and warm-up checks;
(G) power checks;
(H) running down system checks and switching off the engine;
(I) parking, security and picketing (for example tie down);
(J) completion of authorization sheet and serviceability documents.

(iv) Exercise 3: Taxiing:
(A) pre-taxi checks;
(B) starting, control of speed and stopping;
(C) engine handling;
(D) control of direction and turning;
(E) turning in confined spaces;
(F) parking area procedure and precautions;
(G) effects of wind and use of flying controls;
(H) effects of ground surface;
(I) freedom of rudder movement;
(J) marshalling signals;
(K) instrument checks;
(L) air traffic control procedures (if applicable).

(v) Exercise 3e: Emergencies: brake and steering failure.
(vi) Exercise 4: Straight and level:

(A) at normal cruising power, attaining and maintaining straight and level flight;
(B) flight at critically high air speeds;
(C) demonstration of inherent stability;
(D) control in pitch, including use of trim;
(E) lateral level, direction and balance and trim;
(F) at selected air speeds (use of power);
(G) during speed and configuration changes;
(H) use of instruments for precision.

(vii) Exercise 5: Climbing:

(A) entry, maintaining the normal and max rate climb and levelling off;
(B) levelling off at selected altitudes;
(C) en-route climb (cruise climb);
(D) climbing with flap down;
(E) recovery to normal climb;
(F) maximum angle of climb;
(G) use of instruments for precision.

(viii) Exercise 6: Descending:
(A) entry, maintaining and levelling off;
(B) levelling off at selected altitudes;
(C) glide, powered and cruise descent (including effect of power and air speed);
(D) side slipping (on suitable types);
(E) use of instruments for precision flight.

(ix) Exercise 7: Turning:
(A) entry and maintaining medium level turns;
(B) resuming straight flight;
(C) faults in the turn (incorrect pitch, bank and balance);
(D) climbing turns;
(E) descending turns;
(F) slipping turns (on suitable types);
(G) turns onto selected headings, use of gyro heading indicator or compass;
(H) use of instruments for precision.

(x) Exercise 8a: Slow flight:
Note: the objective is to improve the pilot’s ability to recognise inadvertent flight at critically low speeds and provide practice in maintaining the TMG in balance while returning to normal air speed.

(A) safety checks;
(B) introduction to slow flight;
(C) controlled flight down to critically slow air speed;
(D) application of full power with correct attitude and balance to achieve normal climb speed.

(xi) Exercise 8b: Stalling:
(A) airmanship;
(B) safety checks;
(C) symptoms;
(D) recognition;

(E) clean stall and recovery without power and with power;

(F) recovery when a wing drops;

(G) approach to stall in the approach and in the landing configurations, with and without power, recovery at the incipient stage.

(xii) Exercise 9: Take-off and climb to downwind position:

(A) pre-take-off checks;

(B) into wind take-off;

(C) safeguarding the nose wheel (if applicable);

(D) crosswind take-off;

(E) drills during and after take-off;

(F) short take-off and soft field procedure or techniques including performance calculations;

(G) noise abatement procedures.

(xiii) Exercise 10: Circuit, approach and landing:

(A) circuit procedures, downwind and base leg;

(B) powered approach and landing;

(C) safeguarding the nose wheel (if applicable);

(D) effect of wind on approach and touchdown speeds;

(E) use of airbrakes, flaps, slats or spoilers;

(F) crosswind approach and landing;

(G) glide approach and landing (engine stopped);

(H) short landing and soft field procedures or techniques;

(I) flapless approach and landing (if applicable);

(J) wheel landing (tail wheel aeroplanes);

(K) missed approach and go-around;

(L) noise abatement procedures.
Exercise 9/10e: Emergencies:

(A) abandoned take-off;
(B) engine failure after take-off;
(C) mislanding and go-around;
(D) missed approach.

Note: in the interests of safety it will be necessary for pilots trained on nose wheel TMGs to undergo dual conversion training before flying tail wheel TMGs, and vice versa.

Exercise 11: Advanced turning:

(A) steep turns (45 °), level and descending;
(B) stalling in the turn and recovery;
(C) recoveries from unusual attitudes, including spiral dives.

Exercise 12: Stopping and restarting the engine:

(A) engine cooling procedures;
(B) switching off procedure in-flight;
(C) sailplane operating procedures;
(D) restarting procedure.

Exercise 13: Forced landing without power:

(A) forced landing procedure;
(B) choice of landing area, provision for change of plan;
(C) gliding distance;
(D) descent plan;
(E) key positions;
(F) engine failure checks;
(G) use of radio;
(H) base leg;
(I) final approach;
(J) landing;
(K) actions after landing.

(xviii) Exercise 14: Precautionary landing:

(A) full procedure away from aerodrome to break-off height;
(B) occasions necessitating;
(C) in-flight conditions;
(D) landing area selection:
   (a) normal aerodrome;
   (b) disused aerodrome;
   (c) ordinary field.
(E) circuit and approach;
(F) actions after landing.

(xix) Exercise 15a: Navigation

(A) Flight planning
   (a) weather forecast and actuals;
   (b) map selection and preparation:
      (1) choice of route;
      (2) airspace structure;
      (3) safety altitudes.
   (c) calculations:
      (1) magnetic heading(s) and time(s) en-route;
      (2) fuel consumption;
      (3) mass and balance;
      (4) mass and performance.
   (d) flight information:
      (1) NOTAMs, etc.;
      (2) radio frequencies;
      (3) selection of alternate aerodromes.
(e) TMG documentation;

(f) notification of the flight:

(1) pre-flight administrative procedures;

(2) flight plan form.

(B) Departure:

(a) organisation of cockpit workload;

(b) departure procedures:

(1) altimeter settings;

(2) ATC liaison in regulated airspace;

(3) setting heading procedure;

(4) noting of ETAs.

(C) En-route:

(a) maintenance of altitude and heading;

(b) revisions of ETA and heading;

(c) log keeping;

(d) use of radio or compliance with ATC procedures;

(e) minimum weather conditions for continuation of flight;

(f) in-flight decisions;

(g) transiting controlled or regulated airspace;

(h) diversion procedures;

(i) uncertainty of position procedure;

(j) lost procedure.

(D) Arrival, aerodrome joining procedure:

(a) ATC liaison in regulated airspace;

(b) altimeter setting;

(c) entering the traffic pattern;
(d) circuit procedures;
(e) parking;
(f) security of TMG;
(g) refueling;
(h) closing of flight plan, if appropriate;
(i) post-flight administrative procedures.

(xx) Exercise 15b: Navigation problems at lower levels and in reduced visibility:
    (A) actions before descending;
    (B) hazards (for example obstacles and terrain);
    (C) difficulties of map reading;
    (D) effects of wind and turbulence;
    (E) vertical situational awareness (avoidance of controlled flight into terrain);
    (F) avoidance of noise sensitive areas;
    (G) joining the circuit;
    (H) bad weather circuit and landing.

(xx) Exercise 15c: Radio navigation (basics):
    (A) Use of GNSS or VOR/NDB;
        (a) selection of waypoints;
        (b) to or from indications or orientation;
        (c) error messages.
    (B) Use of VHF/DF:
        (a) availability, AIP and frequencies;
        (b) R/T procedures and ATC liaison;
        (c) obtaining a QDM and homing.
    (C) Use of en-route or terminal radar:
        (a) availability and AIP;
        (b) procedures and ATC liaison;
(c) pilot’s responsibilities;
(d) secondary surveillance radar;
   (1) transponders;
   (2) code selection;
   (3) interrogation and reply.

**AMC1 MFCL.110.B LAPL (B) — Experience requirements and crediting**

**CREDITING: PRE-ENTRY FLIGHT TEST**

The pre-entry flight test referred to in MFCL.110.B (b) should cover the total content of the syllabus of flight instruction for the issuance of the LAPL (B), in accordance with AMC1 MFCL.110.B and MFCL.210.B.

**AMC1 MFCL.110.B; MFCL.210.B**

**FLIGHT INSTRUCTION FOR THE LAPL (B) AND FLIGHT INSTRUCTION FOR THE BPL**

(a) Entry to training
   Before being accepted for training an applicant should be informed that the appropriate medical certificate must be obtained before solo flying is permitted.

(d) Flight instruction
   (1) The LAPL(B) or BPL flight instruction syllabus should take into account the principles of threat and error management and also cover:
      (i) pre-flight operations, including load calculations, balloon inspection and servicing;
      (ii) crew and passenger briefings;
      (iii) inflation and crowd control;
      (iv) control of the balloon by external visual reference;
      (v) take-off in different wind conditions;
      (vi) approach from low and high level;
      (vii) landings in different surface wind conditions;
      (viii) cross-country flying using visual reference and dead reckoning;
      (ix) emergency operations, including simulated balloon equipment malfunctions;
      (x) compliance with air traffic services procedures and communication
procedures

(xi) avoidance of nature protection areas, landowner relations

(2) Before allowing the applicant to undertake his/her first solo flight, the FI should ensure that the applicant can operate the required systems and equipment.

(e) Syllabus of flight instruction (hot-air balloon)

(1) The numbering of exercises should be used primarily as an exercise reference list and as a broad instructional sequencing guide; therefore the demonstrations and practices need not necessarily be given in the order listed. The actual order and content will depend upon the following interrelated factors:

(i) the applicant’s progress and ability;
(ii) the weather conditions affecting the flight;
(iii) the flight time available;
(iv) instructional technique considerations;
(v) the local operating environment;
(vi) applicability of the exercises to the balloon type.

(2) Each of the exercises involves the need for the applicant to be aware of the needs of good airmanship and look-out, which should be emphasised at all times.

(i) Exercise 1: Familiarisation with the balloon:

(A) characteristics of the balloon;
(B) the components or systems;
(C) re-fueling of the cylinders;
(D) instruments and equipment;
(E) use of checklist(s) and procedures.

(ii) Exercise 2: Preparation for flight:

(A) documentation and equipment;
(B) weather forecast and actuals;
(C) flight planning:
   (a) NOTAMs
(b) airspace structure;
(c) sensitive areas (for example nature protection areas);
(d) expected track and distance;
(e) pre-flight picture;
(f) possible landing fields.

(D) launch field:
(a) permission;
(b) field selection;
(c) behaviour;
(d) adjacent fields.

(E) load calculations.

(iii) Exercise 3: Crew and passenger briefing:
(A) clothing;
(B) crew briefing;
(C) passenger briefing.

(iv) Exercise 4: Assembly and layout:
(A) crowd control;
(B) rigging envelope, basket and burner;
(C) burner test;
(D) use of restraint line;
(E) pre-inflation checks.

(v) Exercise 5: Inflation:
(A) crowd control;
(B) cold inflation;
(C) use of the inflation fan;
(D) hot inflation.

(vi) Exercise 6: Take-off in different wind conditions:
(A)  pre take-off checks and briefings;
(B)  heating for controlled climb;
(C)  'hands off and hands on' procedure for ground crew;
(D)  assessment of lift;
(E)  use of quick release;
(F)  assessment of wind and obstacles;
(G)  take-off in wind without shelter obstacles;
(H)  preparation for false lift.

(vii)  Exercise 7: Climb to level flight:
(A)  climbing with a predetermined rate of climb;
(B)  look-out procedures;
(C)  effect on envelope temperature;
(D)  maximum rate of climb according to manufacturer’s flight manual;
(E)  levelling off at selected altitude.

(viii)  Exercise 8: Level flight:
(A)  maintaining level flight by:
   (a)  use of instruments only;
   (b)  use of visual references only;
   (c)  all available means.
(B)  use of parachute and turning vents (if applicable).

(ix)  Exercise 9: Descent to level flight:
(A)  descent with a predetermined rate of descent;
(B)  fast descent;
(C)  look-out procedures;
(D)  maximum rate of descent according to manufacturer’s flight manual;
(E)  use of parachute;
(F) parachute stall;

(G) cold descent;

(H) levelling off at selected altitude.

(x) Exercise 10: Emergencies – systems:

(A) pilot light failure;

(B) burner failure, valve leaks, flame out and re-light;

(C) gas leaks;

(D) envelope over temperature;

(E) envelope damage in-flight;

(F) parachute or rapid deflation system failure.

(xi) Exercise 10B: Other emergencies:

(A) fire extinguisher;

(B) fire on ground;

(C) fire in the air;

(D) contact with electrical power lines;

(E) obstacle avoidance;

(F) escape drills, location and use of emergency equipment.

(xii) Exercise 11: Navigation:

(A) maps selection;

(B) plotting expected track;

(C) marking positions and time;

(D) calculation of distance, speed and fuel consumption;

(E) ceiling limitations (ATC, weather and envelope temperature);

(F) planning ahead;

(G) monitoring of weather development and acting so;

(H) monitoring of fuel consumption and envelope temperature;
(I) ATC liaison (if applicable);
(J) communication with retrieve crew;
(K) use of GNSS (if applicable).

(xiii) Exercise 12: Fuel management:
(A) cylinder arrangement and burner systems;
(B) pilot light supply (vapour or liquid);
(C) use of master cylinders (if applicable);
(D) fuel requirement and expected fuel consumption;
(E) fuel state and pressure;
(F) fuel reserves;
(G) cylinder contents gauge and change procedure;
(H) use of cylinder manifolds.

(xiv) Exercise 13: Approach from low level:
(A) pre-landing checks;
(B) passenger pre-landing briefing;
(C) selection of field;
(D) use of burner and parachute;
(E) look-out procedures;
(F) missed approach and fly on.

(xv) Exercise 14: Approach from high level:
(A) pre-landing checks;
(B) passenger pre-landing briefing;
(C) selection of field;
(D) rate of descent;
(E) use of burner and parachute;
(F) look-out procedures;
(G) missed approach and fly on.

(xvi) Exercise 15: Operating at low level:
   (A) use of burner, whisper burner and parachute;
   (B) look-out procedures;
   (C) avoidance of low level obstacles;
   (D) avoidance of protection areas;
   (E) landowner relations.

(xvii) Exercise 16: Landing in different wind conditions:
   (A) pre-landing checks;
   (B) passenger pre-landing briefing;
   (C) selection of field;
   (D) turbulences (in the case of landings with high wind speed only);
   (E) use of burner and pilot lights;
   (F) use of parachute and turning vents (if applicable);
   (G) look-out procedures;
   (H) dragging and deflation;
   (I) landowner relations;
   (J) airmanship.

(xviii) Exercise 17: First solo:
   (A) supervised flight preparation;
   (B) instructor’s briefing, observation of flight and de-briefing.

(f) Syllabus of flight instruction (gas balloon)

(1) The numbering of exercises should be used primarily as an exercise reference list and as a broad instructional sequencing guide; therefore the demonstrations and practices need not necessarily be given in the order listed. The actual order and content will depend upon the following interrelated factors:

   (i) the applicant’s progress and ability;
   (ii) the weather conditions affecting the flight;
(iii) the flight time available;
(iv) instructional technique considerations;
(v) the local operating environment;
(vi) applicability of the exercises to the balloon type.

(2) Each of the exercises involves the need for the pilot-under-training to be aware of the needs of good airmanship and look-out, which should be emphasised at all times.

(i) Exercise 1: Familiarisation with the balloon:

(A) characteristics of the balloon;
(B) the components or systems;
(C) instruments and equipment;
(D) use of checklist(s) and procedures.

(ii) Exercise 2: Preparation for flight:

(A) documentation and equipment
(B) weather forecast and actuals;

(C) flight planning:

(a) NOTAMs;
(b) airspace structure;
(c) sensitive areas (for example nature protection areas);
(d) expected track and distance;
(e) pre-flight picture;
(f) possible landing fields.

(D) launch field:

(a) permission;
(b) behaviour;
(c) adjacent fields.

(E) load calculations.

(iii) Exercise 3: Crew and passenger briefing:
(A) clothing;
(B) crew briefings;
(C) passenger briefing.

(iv) Exercise 4: Assembly and layout:
(A) crowd control;
(B) rigging envelope and basket (balloon with net);
(C) rigging envelope and basket (netless balloon);
(D) ballast check.

(v) Exercise 5: Inflation:
(A) crowd control;
(B) inflation procedure according to manufacturer’s flight manual;
(C) avoiding electrostatic discharge.

(vi) Exercise 6: Take-off in different wind conditions:
(A) pre take-off checks and briefings;
(B) prepare for controlled climb;
(C) ‘hands off and hands on’ procedure for ground crew;
(D) assessment of wind and obstacles;
(E) preparation for false lift.

(vii) Exercise 7: Climb to level flight:
(A) climb with a predetermined rate of climb;
(B) look-out procedures;
(C) maximum rate of climb according to manufacturer’s flight manual;
(D) levelling off at selected altitude.

(viii) Exercise 8: Level flight:
(A) maintaining level flight by:
(a) use of instruments only;
(b) use of visual references only;
(c) all available means.

(B) use of parachute or valve.

(ix) Exercise 9: Descent to level flight:
(A) descent with a predetermined rate of descent;
(B) fast descent;
(C) look-out procedures;
(D) maximum rate of descent according to manufacturer’s flight manual;
(E) use of parachute or valve;
(F) levelling off at selected altitude.

(x) Exercise 10: Emergencies:
(A) closed appendix during take-off and climb;
(B) envelope damage in-flight;
(C) parachute or valve failure;
(D) contact with electrical power lines;
(E) obstacle avoidance;
(F) escape drills, location and use of emergency equipment.

(xi) Exercise 11: Navigation:
(A) map selection;
(B) plotting expected track;
(C) marking positions and time;
(D) calculation of distance, speed and ballast consumption;
(E) ceiling limitations (ATC, weather and ballast);
(F) planning ahead;
(G) monitoring of weather development and acting so;
(H) monitoring of ballast consumption;
(I) ATC liaison (if applicable);
(J) communication with retrieve crew;
(K) use of GNSS (if applicable).

(xii) Exercise 12: Ballast management:

(A) minimum ballast;
(B) arrangement and securing of ballast;
(C) ballast requirement and expected ballast consumption;
(D) ballast reserves.

(xiii) Exercise 13: Approach from low level:

(A) pre-landing checks;
(B) passenger pre-landing checks;
(C) selection of field;
(D) use of ballast and parachute or valve;
(E) use of trail rope (if applicable);
(F) look-out procedures;
(G) missed approach and fly on.

(xiv) Exercise 14: Approach from high level:

(A) pre-landing checks;
(B) passenger pre-landing checks;
(C) selection of field;
(D) rate of descent;
(E) use of ballast and parachute or valve;
(F) use of trail rope (if applicable);
(G) look-out procedures;
(H) missed approach and fly on.
(xv) Exercise 15: Operating at low level:
   (A) use of ballast and parachute or valve;
   (B) look-out procedures;
   (C) avoidance of low level obstacle;
   (D) avoidance of protection areas;
   (E) landowner relations.

(xvi) Exercise 16: Landing in different wind conditions:
   (A) pre-landing checks;
   (B) passenger pre-landing briefing;
   (C) selection of field;
   (D) turbulences (in the case of landings with high wind speed only);
   (E) use of ballast and parachute or valve;
   (F) look-out procedures;
   (G) use of rip panel;
   (H) dragging;
   (I) deflation;
   (J) avoiding electrostatic discharge;
   (K) landowner relations.

(xvii) Exercise 17: First solo:

Note: the exercises 1 to 16 have to be completed and the student must have achieved a safe and competent level before the first solo flight takes place.

   (A) supervised flight preparation;
   (B) instructor’s briefing, observation of flight and de-briefing.

**AMC1 MFCL.130.B; MFCL.220.B**

**FLIGHT INSTRUCTION FOR THE EXTENSION OF PRIVILEGES TO TETHERED FLIGHTS**

(a) The aim of the flight instruction is to qualify LAPL (B) or BPL holders to perform tethered flights.
(b) The flying exercise should cover the following training items:

1. ground preparations;
2. weather suitability;
3. tether points:
   (i) upwind;
   (ii) downwind.
4. tether ropes (three point system);
5. maximum all-up-weight limitation;
6. crowd control;
7. pre take-off checks and briefings;
8. heating for controlled lift off;
9. ‘hands off and hands on’ procedure for ground crew;
10. assessment of lift;
11. assessment of wind and obstacles;
12. take-off and controlled climb (at least up to 60 ft – 20m).

AMC1 MFCL.135.B; MFCL.225.B

THEORETICAL KNOWLEDGE INSTRUCTION FOR THE EXTENSION TO ANOTHER BALLOON CLASS: LAPL (B) AND BPL

(a) The aim of the flight instruction is to qualify LAPL (B) or BPL holders to exercise the privileges on a different class of balloons.

(b) The following classes are recognised:

1. hot-air balloons;
2. gas balloons;
3. hot-air airships.

(c) The ATO should issue a certificate of satisfactory completion of the instruction to license endorsement.

(d) Theoretical knowledge

The theoretical knowledge syllabus should cover the revision or explanation of:
(1) principles of flight:
   (i) operating limitations;
   (ii) loading limitations.

(2) operational procedures:
   (i) special operational procedures and hazards;
   (ii) emergency procedures.

(3) flight performance and planning:
   (i) mass considerations;
   (ii) loading;
   (iii) performance (hot-air balloon, gas balloon or hot-air airship);
   (iv) flight planning;
   (v) fuel planning;
   (vi) flight monitoring.

(4) aircraft general knowledge:
   (i) system designs, loads, stresses and maintenance;
   (ii) envelope;
   (iii) burner (only extension to hot-air balloon or airship);
   (iv) fuel cylinders (except gas balloon);
   (v) basket or gondola;
   (vi) lifting or burning gas;
   (vii) ballast (only gas balloon);
   (viii) engine (only hot-air airship);
   (ix) instruments and indication systems;
   (x) emergency equipment.

**AMC2 MFCL.135.B; MFCL.225.B**

**FLIGHT INSTRUCTION FOR THE EXTENSION TO ANOTHER BALLOON CLASS: LAPL (B) AND BPL**

(a) This additional syllabus of flight instruction should be used for the extension of
privileges for LAPL (B) and BPL - hot-air balloon to hot-air airship.

(b) The prerequisite for the extension of privileges to hot-air airships is a valid BPL or LAPL for hot-air balloons because a hot-air airship with a failed engine must be handled in a similar manner as a hot-air balloon. The conversion training has to concentrate therefore on the added complication of the engine, its controls and the different operating limitations of a hot-air airship.

(1) The numbering of exercises should be used primarily as an exercise reference list and as a broad instructional sequencing guide; therefore the demonstrations and practices need not necessarily be given in the order listed.

(2) The flying exercises should cover the revision or explanation of the following exercises:

(i) Exercise 1: Familiarisation with the hot-air airship:
   
   (A) characteristics of the hot-air airship;
   
   (B) the components or systems;
   
   (C) instruments and equipment;
   
   (D) use of checklist(s) and procedures.

(ii) Exercise 2: Preparation for flight:

   (A) documentation and equipment;

   (B) weather forecast and actuals;

   (C) flight planning:

   (a) NOTAMs;

   (b) airspace structure;

   (c) sensitive areas;

   (d) expected track and distance;

   (e) pre-flight picture;

   (f) possible landing fields.

   (D) launch field:

   (a) permission;

   (b) behaviour;

   (c) field selection;
(d) adjacent fields.

(E) load and fuel calculations.

(iii) Exercise 3: Crew and passenger briefing:

(A) clothing;

(B) crew briefing;

(C) passenger briefing.

(iv) Exercise 4: Assembly and layout:

(A) crowd control;

(B) rigging envelope, gondola, burner and engine;

(C) burner test;

(D) pre-inflation checks.

(v) Exercise 5: Inflation:

(A) crowd control;

(B) cold inflation:

(a) use of restraint line;

(b) use of the inflation fan.

(C) hot inflation.

(vi) Exercise 6: Engine:

(A) identification of main parts and controls;

(B) familiarisation with operation and checking of the engine;

(C) engine checks before take-off.

(vii) Exercise 7: Pressurisation:

(A) pressurisation fan operation;

(B) super pressure and balance between pressure and temperature;

(C) pressure limitations.

(viii) Exercise 8: Take-off:
(A) before take-off checks and briefings;

(B) heating for controlled climb;

(C) procedure for ground crew;

(D) assessment of wind and obstacles.

(ix) Exercise 9: Climb to level flight:

(A) climbing with a predetermined rate of climb;

(B) effect on envelope temperature and pressure;

(C) maximum rate of climb according to manufacturer’s flight manual;

(D) level off at selected altitude.

(x) Exercise 10: Level flight:

(A) maintaining level flight by:

   (a) use of instruments only;

   (b) use of visual references only;

   (c) all available means.

(B) maintaining level flight at different air speeds by taking aerodynamic lift into account.

(xi) Exercise 11: Descent to level flight:

(A) descent with a predetermined rate of descent;

(B) maximum rate of descent according to manufacturer’s flight manual;

(C) levelling off at selected altitude.

(xii) Exercise 12: Emergencies - systems:

(A) engine failure;

(B) pressurisation failure;

(C) rudder failure;

(D) pilot light failure;

(E) burner failure, valve leaks, flame out and re-light;
(F) gas leaks;

(G) envelope over temperature;

(H) envelope damage in-flight.

(xiii) Exercise 12B: Other emergencies:

(A) fire extinguishers;
(B) fire on ground;
(C) fire in the air;
(D) contact with electrical power lines;
(E) obstacle avoidance;
(F) escape drills, location and use of emergency equipment.

(xiv) Exercise 13: Navigation:

(A) map selection and preparation;
(B) plotting and steering expected track;
(C) marking positions and time;
(D) calculation of distance, speed and fuel consumption;
(E) ceiling limitations (ATC, weather and envelope temperature);
(F) planning ahead;
(G) monitoring of weather development and acting so;
(H) monitoring of fuel and envelope temperature or pressure;
(I) ATC liaison (if applicable);
(J) communication with ground crew;
(K) use of GNSS (if applicable).

(xv) Exercise 14: Fuel management:

(A) engine arrangement and tank system;
(B) cylinder arrangement and burner systems;
(C) pilot light supply (vapour or liquid);
(D) fuel requirement and expected fuel consumption for engine and burner;

(E) fuel state and pressure;

(F) fuel reserves;

(G) cylinder and petrol tank contents gauge.

(xvi) Exercise 15: Approach and go-around:

(A) pre-landing checks;

(B) selection of field into wind;

(C) use of burner and engine;

(D) look-out procedures;

(E) missed approach and go-around.

(xvii) Exercise 16: Approach with simulated engine failure:

(A) pre-landing checks;

(B) selection of field;

(C) use of burner;

(D) look-out procedures;

(E) missed approach and go-around.

(xviii) Exercise 17: Operating at low level:

(A) use of burner and engine;

(B) look-out procedures;

(C) avoidance of low level obstacles;

(D) avoidance of sensitive areas (nature protection areas) or landowner relations.

(xix) Exercise 18: Steering:

(A) assessment of wind;

(B) correcting for wind to steer a given course.

(xx) Exercise 19: Final landing:

(A) pre-landing checks;
DEPARTMENT OF CIVIL AVIATION
MFCL ACCEPTABLE MEANS OF COMPLIANCE AND GUIDANCE
MATERIAL

(B) use of burner and engine;
(C) look-out;
(D) deflation;
(E) landowner relations.

AMC3 MFCL.135.B; MFCL.225.B

CONTENTS OF THE SKILL TEST FOR THE EXTENSION OF A LAPL (B) OR A BPL TO
ANOTHER BALLOON CLASS (HOT-AIR AIRSHIP)

(a) The take-off site should be chosen by the applicant depending on the
actual meteorological conditions, the area which has to be overflown and
the possible options for suitable landing sites. The applicant should be
responsible for the flight planning and should ensure that all equipment
and documentation for the execution of the flight are on board.

(b) An applicant should indicate to the FE the checks and duties carried out.
Checks should be completed in accordance with the flight manual or the
authorised checklist for the balloon on which the test is being taken.
During pre-flight preparation for the test the applicant should be required
to perform crew and passenger briefings and demonstrate crowd control. The
load calculation should be performed by the applicant in compliance with the
operations manual or flight manual for the hot-air airship used.

FLIGHT TEST TOLERANCE

(c) The applicant should demonstrate the ability to:

(1) operate the hot-air airship within its limitations;
(2) complete all manoeuvres with smoothness and accuracy;
(3) exercise good judgment and airmanship;
(4) apply aeronautical knowledge;
(5) maintain control of the airship at all times in such a manner that
the successful outcome of a procedure or manoeuvre is never seriously
in doubt.

CONTENT OF THE SKILL TEST

(d) The skill test contents and sections set out in this AMC should be used for
the skill test for the issue of a LAPL (B) and BPL hot-air airship
extension

SECTION 1 PRE-FLIGHT OPERATIONS, INFLATION AND TAKE-OFF
**Use of checklist, airmanship, control of hot-air airship by external visual reference, look-out procedures, etc. apply in all sections.**

The following tables contain the syllabi for the courses of theoretical knowledge, as well as for the theoretical knowledge examinations for the PPL (A) and PPL (H). The training and examination should cover aspects related to non-technical skills in an integrated manner, taking into account the particular risks associated to the license and the activity. An approved course shall comprise at least 100 hours of theoretical knowledge instruction. This theoretical knowledge instruction provided by the ATO should include a certain element of formal classroom work but may include also such facilities as interactive video, slide or tape presentation, computer-based training and other media distance learning courses. The training organisation responsible for the training has to check if all the appropriate elements of the training course of theoretical knowledge instruction have been completed to a satisfactory standard before recommending the applicant for the examination.

The applicable items for each license are marked with ‘x’. An ‘x’ on the main title of a subject means that all the sub-divisions are applicable.

**PPL Bridge course**

Dated 04 MARCH 2015
### Reduction of pressure to mean sea level

| Relationship between surface pressure centres | x | x |

### Air density

| Relationship between pressure, temperature and density | x | x |

### ISA

| ICAO standard atmosphere | x | x |

### Altimetry

| Terminology and definitions | x | x |
| Altimeter and altimeter settings | x | x |
| Calculations | x | x |
| Effect of accelerated airflow due to topography | x | x |

### Wind

#### Definition and measurement of wind

| Definition and measurement | x | x |

#### Primary cause of wind

| Primary cause of wind, pressure gradient, coriolis force and gradient wind | x | x |
| Variation of wind in the friction layer | x | x |
| Effects of convergence and divergence | x | x |

### 4. COMMUNICATIONS

#### VFR COMMUNICATIONS

| Meanings and significance of associated terms | x | x |
| ATS abbreviations | x | x |
| Q-code groups commonly used in RTF air-ground communications | x | x |
| Categories of messages | x | x |

#### General operating procedures

| Transmission of letters | x | x |
### Transmission of numbers (including level information)
- aeroplane: x
- helicopter: x

### Transmission of time
- aeroplane: x
- helicopter: x

### Transmission technique
- aeroplane: x
- helicopter: x

### Standard words and phrases (relevant RTF phraseology included)
- aeroplane: x
- helicopter: x

### R/T call signs for aeronautical stations including use of abbreviated call signs
- aeroplane: x
- helicopter: x

### R/T call signs for aircraft including use of abbreviated call signs
- aeroplane: x
- helicopter: x

### Transfer of communication
- aeroplane: x
- helicopter: x

### Test procedures including readability scale
- aeroplane: x
- helicopter: x

### Read back and acknowledgement requirements
- aeroplane: x
- helicopter: x

### Relevant weather information terms (VFR)
- Aerodrome weather
  - aeroplane: x
  - helicopter: x
- Weather broadcast
  - aeroplane: x
  - helicopter: x
- Action required to be taken in case of communication failure
  - aeroplane: x
  - helicopter: x

### Distress and urgency procedures
- Distress (definition, frequencies, watch of distress frequencies, distress signal and distress message)
  - aeroplane: x
  - helicopter: x
- Urgency (definition, frequencies, urgency signal and urgency message)
  - aeroplane: x
  - helicopter: x

### General principles of VHF propagation and allocation of frequencies
- aeroplane: x
- helicopter: x

### 5. PRINCIPLES OF FLIGHT

#### 5.1. PRINCIPLES OF FLIGHT: AEROPLANE
- Subsonic aerodynamics
- Basics concepts, laws and definitions
  - laws and definitions: x
  - aeroplane: x
  - helicopter: x

### Stall warning:
- (a) importance of stall warning;
- (b) speed margin;
- (c) buffet;
- (d) stall strip;
- (e) flapper switch;
- (f) recovery from stall.

### Special phenomena of stall:
- (a) the power-on stall;
- (b) climbing and descending turns;
- (c) t-tailed aeroplane;
- (d) avoidance of spins:
  - (1) spin development;
  - (2) spin recognition;
  - (3) spin recovery.
- (e) ice (in stagnation point and on surface):
  - (1) absence of stall warning;
  - (2) abnormal behaviour of the aircraft during stall.

### CL augmentation
- Trailing edge flaps and the reasons for use in take-off and landing:
  - (a) influence on CL - $\alpha$-graph;
  - (b) different types of flaps;
  - (c) flap asymmetry;
  - (d) influence on pitch movement.

- Leading edge devices and the reasons for use in take-off and landing

### The boundary layer
- Different types:
  - (a) laminar;
  - (b) turbulent.

### Special circumstances
### Ice and other contamination:
- (a) ice in stagnation point;
- (b) ice on the surface (frost, snow and clear ice);
- (c) rain;
- (d) contamination of the leading edge;
- (e) effects on stall;
- (f) effects on loss of controllability;
- (g) effects on control surface moment;
- (h) influence on high lift devices during take-off, landing and low speeds.

### Aerodynamic forces on aerofoil elements:
- (a) angle of attack;
- (b) pressure distribution;
- (c) lift and lift coefficient
- (d) relation lift coefficient: angle of attack;
- (e) profile drag and drag coefficient;
- (f) relation drag coefficient: angle of attack;
- (g) resulting force, centre of pressure and pitching moment.

### Stall:
- (a) boundary layer and reasons for stalling;
- (b) variation of lift and drag as a function of angle of attack;
- (c) displacement of the centre of pressure and pitching moment.

### Disturbances due to profile contamination:
- (a) ice contamination;
- (b) ice on the surface (frost, snow and clear ice).

### The three-dimensional airflow round a wing and a fuselage

### The wing:
- (a) planform, rectangular and tapered wings;
- (b) wing twist.

### Airflow pattern and influence on lift:

**DEPARTMENT OF CIVIL AVIATION**
**MFCL ACCEPTABLE MEANS OF COMPLIANCE AND GUIDANCE MATERIAL**

Dated 04 MARCH 2015
The airflow round a fuselage:
(a) components of a fuselage;
(b) parasite drag;
(c) variation with speed.

<table>
<thead>
<tr>
<th>Transonic aerodynamics and compressibility effects</th>
</tr>
</thead>
</table>

Airflow velocities
(a) speed of sound;
(b) subsonic, high subsonic and supersonic flows.

Airflow speeds:
(a) speed of sound;
(b) subsonic, high subsonic and supersonic flows.

Shock waves:
(a) compressibility and shock waves;
(b) the reasons for their formation at upstream high subsonic airflow;
(c) their effect on lift and drag.

Influence of wing planform: sweep-angle

Rotorcraft types

Rotorcraft

Rotorcraft types:
(a) autogyro;
(b) helicopter.

Helicopters

Helicopters configurations: the single main rotor helicopter

The helicopter, characteristics and associated terminology:
(a) general lay-out, fuselage, engine and gearbox;
(b) tail rotor, fenestron and NOTAR;

(c) engines (reciprocating and turbo shaft engines);
(d) power transmission;

**Aeroplane** | **Helicopter**  
| PPL | Bridge course | PPL | Bridge course |

| Blade lag motion |  |  |
Forces on the blade in the disc plane (tip path plane) in forward flight:
(a) forces due to the Coriolis effect because of the flapping;
(b) alternating stresses and the need of the drag or lag hinge.
The drag or lag hinge:
(a) the drag hinge in the fully articulated rotor;
(b) the lag flexure in the hinge less rotor;
(c) drag dampers.

Ground resonance:
(a) blade lag motion and movement of the centre of gravity of the blades and the rotor;
(b) oscillating force on the fuselage;
(c) fuselage, undercarriage and resonance.

Rotor systems

See-saw or teetering rotor

Fully articulated rotor:
(a) three hinges arrangement;
(b) bearings and elastomeric hinges.

Hinge less rotor and bearing less rotor

### 7.2. PERFORMANCE: AEROPLANES

#### Introduction
- Performance classes
- Stages of flight

#### Effect of aeroplane mass, wind, altitude, runway slope and runway conditions

#### Gradients

#### SE aeroplanes
- Definitions of terms and speeds

#### Take-off and landing performance
- Use of aeroplane flight manual data

#### Climb and cruise performance
- Use of aeroplane flight data
- Effect of density altitude and aeroplane mass
- Endurance and the effects of the different recommended power or thrust settings
- Still air range with various power or thrust settings

### 7.3. FLIGHT PLANNING AND FLIGHT MONITORING

#### Flight planning for VFR flights

#### VFR navigation plan
- Routes, airfields, heights and altitudes from VFR charts
- Courses and distances from VFR charts
- Aerodrome charts and aerodrome directory
- Communications and radio navigation planning data

| Radar                      | x |
| GNSS                       | x |

**AMC3 MFCL.210; MFCL.215**

**SYLLABUS OF THEORETICAL KNOWLEDGE FOR THE BPL AND SPL**

The syllabi for the theoretical knowledge instruction and examination for the LAPL (B) and LAPL(S) in AMC1 MFCL.115 and MFCL.120 should be used for the BPL and SPL, respectively.

**AMC1 MFCL.215; MFCL.235**

**THEORETICAL KNOWLEDGE EXAMINATION AND SKILL TEST FOR THE PPL**

(a) **Theoretical knowledge examination**

(1) The examinations should comprise a total of 120 multiple-choice questions covering all the subjects.

(2) Communication practical classroom testing may be conducted.

(3) The period of 18 months mentioned in MFCL.025 (b) (2) should be counted from the end of the calendar month when the applicant first attempted an examination.

(b) **Skill test**

Further training may be required following any failed skill test or part thereof. There should be no limit to the number of skill tests that may be attempted.

(c) **Conduct of the test**

(1) If the applicant chooses to terminate a skill test for reasons considered inadequate by the FE, the applicant should retake the entire skill test. If the test is terminated for reasons considered adequate by the FE, only those sections not completed should be tested in a further flight.

(2) Any manoeuvre or procedure of the test may be repeated once by the applicant. The FE may stop the test at any stage if it is considered that the applicant’s demonstration of flying skill requires a complete retest.

(3) An applicant should be required to fly the aircraft from a position
where the PIC functions can be performed and to carry out the test as
if there is no other crew member. Responsibility for the flight should
be allocated in accordance with national regulations.

AMC1 MFCL.235 Skill test

CONTENTS OF THE SKILL TEST FOR THE ISSUE OF A PPL (A)

(a) The route to be flown for the navigation test should be chosen by the FE. The
route may end at the aerodrome of departure or at another aerodrome. The
applicant should be responsible for the flight planning and should ensure that all
equipment and documentation for the execution of the flight are on board. The
navigation section of the test should have a duration that allows the pilot to
demonstrate his/her ability to complete a route with at least three identified
waypoints and may, as agreed between the applicant and FE, be flown as a
separate test.

(b) An applicant should indicate to the FE the checks and duties carried out, including
the identification of radio facilities. Checks should be completed in accordance
with the authorised checklist for the aeroplane on which the test is being taken.
During pre-flight preparation for the test the applicant should be required to
determine power settings and speeds. Performance data for take-off, approach
and landing should be calculated by the applicant in compliance with the
operations manual or flight manual for the aeroplane used.

FLIGHT TEST TOLERANCE

(c) The applicant should demonstrate the ability to:

(1) operate the aeroplane within its limitations;
(2) complete all manoeuvres with smoothness and accuracy;
(3) exercise good judgment and airmanship;
(4) apply aeronautical knowledge;
(5) maintain control of the aeroplane at all times in such a manner
that the successful outcome of a procedure or manoeuvre is never
seriously in doubt.

(d) The following limits are for general guidance. The FE should make allowance
for turbulent conditions and the handling qualities and performance of the
aeroplane used:

<table>
<thead>
<tr>
<th>(1)</th>
<th>height:</th>
</tr>
</thead>
<tbody>
<tr>
<td>(i) normal flight</td>
<td>± 150 ft</td>
</tr>
<tr>
<td>(ii) with simulated engine failure</td>
<td>± 200 ft (if ME aeroplane is used)</td>
</tr>
<tr>
<td>(2)</td>
<td>heading or tracking of radio aids:</td>
</tr>
<tr>
<td>(i) normal flight</td>
<td>± 10 °</td>
</tr>
<tr>
<td>(ii) with simulated engine failure</td>
<td>± 15 ° (if ME</td>
</tr>
</tbody>
</table>
CONTENT OF THE SKILL TEST

(e) The skill test contents and sections set out in this AMC should be used for the skill test for the issue of a PPL (A) on SE and ME aeroplanes or on TMGs.

<table>

| f | As determined by the FE: any relevant items of the class or type rating skill test to include, if applicable:  
  i.  aeroplane systems including handling of auto pilot;  
  ii.  operation of pressurisation system;  
  iii.  use of de-icing and anti-icing system. |
| g | Oral questions |

* These items may be combined, at the discretion of the FE.

**AMC2 MFCL.235 Skill test**

**CONTENTS OF THE SKILL TEST FOR THE ISSUE OF A PPL (H)**
(a) The area and route to be flown should be chosen by the FE and all low level and hover work should be at an adequate aerodrome or site. Routes used for section 3 may end at the aerodrome of departure or at another aerodrome. The applicant should be responsible for the flight planning and should ensure that all equipment and documentation for the execution of the flight are on board. The navigation section of the test, as set out in this AMC should consist of at least three legs, each leg of a minimum duration of 10 minutes. The skill test may be conducted in two flights.

(b) An applicant should indicate to the FE the checks and duties carried out, including the identification of radio facilities. Checks should be completed in accordance with the authorised checklist or pilot operating handbook for the helicopter on which the test is being taken. During pre-flight preparation for the test the applicant is required to determine power settings and speeds. Performance data for take-off, approach and landing should be calculated by the applicant in compliance with the operations manual or flight manual for the helicopter used.

FLIGHT TEST TOLERANCE

(c) The applicant should demonstrate the ability to:

(1) operate the helicopter within its limitations;

(2) complete all manoeuvres with smoothness and accuracy;

(3) exercise good judgement and airmanship;

(4) apply aeronautical knowledge;

(5) maintain control of the helicopter at all times in such a manner that the successful outcome of a procedure or manoeuvre is never seriously in doubt.

(d) The following limits are for general guidance. The FE should make allowance for turbulent conditions and the handling qualities and performance of the helicopter used.

CONTENT OF THE SKILL TEST

(e) The skill test contents and sections set out in this AMC should be used for the skill test for the issue of a PPL (H) on SE or ME helicopters.

SECTION 1 PRE-FLIGHT OR POST-FLIGHT CHECKS AND PROCEDURES

Use of checklist, airmanship, control of helicopter by external visual reference, anti-icing procedures, etc. apply in all sections

<table>
<thead>
<tr>
<th>(i) take-off hover IGE</th>
<th>3 ft</th>
</tr>
</thead>
<tbody>
<tr>
<td>(ii) landing</td>
<td>no sideways or backwards movement</td>
</tr>

a Helicopter knowledge, (for example technical log, fuel, mass and balance, performance), flight planning, NOTAM and weather briefing

b Pre-flight inspection or action, location of parts and purpose

c Cockpit inspection and starting procedure

d Communication and navigation equipment checks, selecting and setting frequencies

e Pre-take-off procedure, R/T procedure and ATC compliance

f Parking, shutdown and post-flight procedure

SECTION 2 HOVER MANOEUVRES, ADVANCED HANDLING AND CONFINED AREAS

a Take-off and landing (lift-off and touch down)

b Taxi and hover taxi

c Stationary hover with head, cross or tail wind

d Stationary hover turns, 360 ° left and right (spot turns)

e Forward, sideways and backwards hover manoeuvring

f Simulated engine failure from the hover

g Quick stops into and downwind

h Sloping ground or unprepared sites landings and take-offs
### SECTION 3 NAVIGATION - EN ROUTE PROCEDURES

</tbody>
</table>

### SECTIONS ABNORMAL AND EMERGENCY PROCEDURES (SIMULATED WHERE APPROPRIATE)
**Note (1)** Where the test is conducted on an ME helicopter, a simulated engine failure drill, including an SE approach and landing should be included in the test.

**Note (2)** The FE should select four items from the following:

<table>
<thead>
<tr>
<th>Letter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>a</td>
<td>Engine malfunctions, including governor failure, carburettor or engine icing and oil system, as appropriate</td>
</tr>
<tr>
<td>b</td>
<td>Fuel system malfunction</td>
</tr>
<tr>
<td>c</td>
<td>Electrical system malfunction</td>
</tr>
<tr>
<td>d</td>
<td>Hydraulic system malfunction, including approach and landing without hydraulics, as applicable</td>
</tr>
<tr>
<td>e</td>
<td>Main rotor or anti-torque system malfunction (FFS or discussion only)</td>
</tr>
<tr>
<td>f</td>
<td>Fire drills, including smoke control and removal, as applicable</td>
</tr>
</tbody>
</table>
| g      | Other abnormal and emergency procedures as outlined in an appropriate flight manual and with reference to Appendix 9 C to Part-MFCL, sections 3 and 4, including for ME helicopters:  
  
  (a) Simulated engine failure at take-off:  
      (1) rejected take-off at or before TDP or safe forced landing at or before DPATO;  
      (2) shortly after TDP or DPATO.  
  (b) Landing with simulated engine failure:  
      (1) landing or go-around following engine failure before LDP or DPBL;  
      (2) following engine failure after LDP or safe forced landing after DPBL. |

**AMC3 MFCL.235 Skill test**

**CONTENT OF THE SKILL TEST FOR THE ISSUE OF THE PPL (AS)**

(a) The area and route to be flown is chosen by the FE. Routes used for section 3 may end at the aerodrome of departure or at another aerodrome and one destination should be a controlled aerodrome. The skill test may be conducted in two flights. The total duration of the flight(s) should be at least 60 minutes.

(b) The applicant should demonstrate the ability to:

(1) operate the airship within its limitations;

(2) complete all manoeuvres with smoothness and accuracy;

(3) exercise good judgement and airmanship;
(4) apply aeronautical knowledge;

(5) maintain control of the airship at all times in such a manner that the successful outcome of a procedure or manoeuvre is never seriously in doubt.

FLIGHT TEST TOLERANCES

(c) The following limits should apply, corrected to make allowance for turbulent conditions and the handling qualities and performance of the airship used.

(d)

1. height:
   (i) normal flight ±200 ft.
   (ii) simulated major emergency ±300 ft

2. tracking on radio aids: ±15 °

3. heading:
   (i) normal flight ±15 °
   (ii) simulated major emergency ±20 °

CONTENT OF THE TEST

(e) The skill test contents and sections set out in this AMC should be used for the skill test for the issue of a PPL (As).

(f) Items in sections 5 and 6 may be performed in an FNPT (As) or a FS (As).

SECTION 1 PRE-FLIGHT OPERATIONS AND DEPARTURE

Use of airship checklists, airmanship, control of airship by external visual reference, anti-icing procedures, and principles of threat and error management, etc. apply in all sections

a Pre-flight, including:
   flight planning, documentation, mass and balance, NOTAM and weather briefing

b Airship inspection and servicing

c Off-mast procedure, ground manoeuvring and take-off

d Performance considerations and trim

e Aerodrome and traffic pattern operations

f Departure procedure, altimeter setting, collision avoidance (look-out)

**AMC1 MFCL.210.A  PPL (A) — Experience requirements and crediting**

**FLIGHT INSTRUCTION FOR THE PPL (A)**

(a) Entry to training

Before being accepted for training an applicant should be informed that the appropriate medical certificate must be obtained before solo flying is permitted.

(b) Flight instruction

(1) The PPL(A) flight instruction syllabus takes into account the principles of threat and error management and also covers:

   (i) pre-flight operations, including mass and balance determination, aircraft inspection and servicing;

   (ii) aerodrome and traffic pattern operations, collision avoidance precautions and procedures;
(iii) control of the aircraft by external visual reference;

(iv) flight at critically low air speeds, recognition of, and recovery from, incipient and full stalls;

(v) flight at critically high air speeds, recognition of, and recovery from, spiral dive;

(vi) normal and crosswind take-offs and landings;

(vii) maximum performance (short field and obstacle clearance) take-offs, short-field landings;

(viii) flight by reference solely to instruments, including the completion of a level 180° turn;

(ix) cross-country flying using visual reference, dead reckoning and radio navigation aids;

(x) emergency operations, including simulated aeroplane equipment malfunctions;

(xi) operations to, from and transiting controlled aerodromes, compliance with air traffic services procedures, communication procedures and phraseology.

(2) Before allowing the applicant for a PPL (A) to undertake his/her first solo flight, the FI should ensure that the applicant can use R/T communication.

(c) Syllabus of flight instruction

(1) The numbering of exercises should be used primarily as an exercise reference list and as a broad instructional sequencing guide; therefore the demonstrations and practices need not necessarily be given in the order listed. The actual order and content will depend upon the following interrelated factors:

(i) the applicant’s progress and ability;

(ii) the weather conditions affecting the flight;

(iii) the flight time available;

(iv) instructional technique considerations;

(v) the local operating environment;

(vi) applicability of the exercises to the aeroplane.

(2) Each of the exercises involves the need for the applicant to be aware of the needs of good airmanship and look-out, which should be emphasised at all times.
(i) Exercise 1a: Familiarisation with the aeroplane:

(A) characteristics of the aeroplane;
(B) cockpit layout;
(C) systems;
(D) checklists, drills and controls.

(ii) Exercise 1b: Emergency drills:

(A) action if fire on the ground and in the air;
(B) engine cabin and electrical system fire;
(C) systems failure;
(D) escape drills, location and use of emergency equipment and exits.

(iii) Exercise 2: Preparation for and action after flight:

(A) flight authorisation and aeroplane acceptance;
(B) serviceability documents;
(C) equipment required, maps, etc.;
(D) external checks;
(E) internal checks;
(F) harness, seat or rudder panel adjustments;
(G) starting and warm-up checks;
(H) power checks;
(I) running down system checks and switching off the engine;
(J) parking, security and picketing (for example tie down);
(K) completion of authorization sheet and serviceability documents

(iv) Exercise 3: Air exercise, flight exercise

(v) Exercise 4: Effects of controls

(A) primary effects when laterally level and when banked;
(B) further effects of aileron and rudder;
(C) effects of:
   (a) air speed;
   (b) slipstream;
   (c) power;
   (d) trimming controls;
   (e) flaps;
   (f) other controls, as applicable.

(D) operation of:
   (a) mixture control;
   (b) carburettor heat;
   (c) cabin heating or ventilation.

(vi) Exercise 5a: Taxiing:
   (A) pre-taxi checks;
   (B) starting, control of speed and stopping;
   (C) engine handling;
   (D) control of direction and turning;
   (E) turning in confined spaces;
   (F) parking area procedure and precautions;
   (G) effects of wind and use of flying controls;
   (H) effects of ground surface;
   (I) freedom of rudder movement;
   (J) marshalling signals;
   (K) instrument checks;
   (L) air traffic control procedures.

(vii) Exercise 5b: Emergencies: brake and steering failure.

(viii) Exercise 6: Straight and level:
   (A) at normal cruising power, attaining and maintaining straight
and level flight;
(B) flight at critically high air speeds;
(C) demonstration of inherent stability;
(D) control in pitch, including use of trim;
(E) lateral level, direction and balance and trim;
(F) at selected air speeds (use of power);
(G) during speed and configuration changes;
(H) use of instruments for precision.

(ix) Exercise 7: Climbing:
(A) entry, maintaining the normal and max rate climb and levelling off;
(B) levelling off at selected altitudes;
(C) en-route climb (cruise climb);
(D) climbing with flap down;
(E) recovery to normal climb;
(F) maximum angle of climb;
(G) use of instruments for precision.

(x) Exercise 8: Descending:
(A) entry, maintaining and levelling off;
(B) levelling off at selected altitudes;
(C) glide, powered and cruise descent (including effect of power and air speed);
(D) side slipping (on suitable types);
(E) use of instruments for precision flight.

(xi) Exercise 9: Turning:
(A) entry and maintaining medium level turns;
(B) resuming straight flight;
(C) faults in the turn (for example in correct pitch, bank and balance);
(D) climbing turns;

(E) descending turns;

(F) faults in the turns (slipping and skidding on suitable types);

(G) turns onto selected headings, use of gyro heading indicator and compass;

(H) use of instruments for precision.

(xii) Exercise 10a: Slow flight:

Note: the objective is to improve the student’s ability to recognise inadvertent flight at critically low speeds and provide practice in maintaining the aeroplane in balance while returning to normal air speed.

(A) safety checks;

(B) introduction to slow flight;

(C) controlled flight down to critically slow air speed;

(D) application of full power with correct attitude and balance to achieve normal climb speed.

(xiii) Exercise 10b: Stalling:

(A) safety checks;

(B) symptoms;

(C) recognition;

(D) clean stall and recovery without power and with power;

(E) recovery when a wing drops;

(F) approach to stall in the approach and in the landing configurations, with and without power and recovery at the incipient stage.

(xiv) Exercise 11: Spin avoidance:

(A) safety checks;

(B) stalling and recovery at the incipient spin stage (stall with excessive wing drop, about 45 °);

(C) instructor induced distractions during the stall.

Note 1: at least two hours of stall awareness and spin avoidance flight
training should be completed during the course.

Note 2: consideration of manoeuvre limitations and the need to refer to the aeroplane manual and mass and balance calculations.

(xv) Exercise 12: Take-off and climb to downwind position:

(A) pre-take-off checks;
(B) into wind take-off;
(C) safeguarding the nose wheel;
(D) crosswind take-off;
(E) drills during and after take-off;
(F) short take-off and soft field procedure/techniques including performance calculations;
(G) noise abatement procedures.

(xvi) Exercise 13: Circuit, approach and landing:

(A) circuit procedures, downwind and base leg;
(B) powered approach and landing;
(C) safeguarding the nose wheel;
(D) effect of wind on approach and touchdown speeds and use of flaps;
(E) crosswind approach and landing;
(F) glide approach and landing;
(G) short landing and soft field procedures or techniques;
(H) flapless approach and landing;
(I) wheel landing (tail wheel aeroplanes);
(J) missed approach and go-around;
(K) noise abatement procedures.

(xvii) Exercise 12/13: Emergencies:

(A) abandoned take-off;
(B) engine failure after take-off;
(C) mislanding and go-around;

(D) missed approach.

Note: in the interests of safety it will be necessary for pilots trained on nose wheel aeroplanes to undergo dual conversion training before flying tail wheel aeroplanes, and vice-versa.

(xviii) Exercise 14: First solo:

(A) instructor’s briefing, observation of flight and de-briefing;
    Note: during flights immediately following the solo circuit consolidation the following should be revised

(B) procedures for leaving and rejoining the circuit;

(C) the local area, restrictions, map reading;

(D) use of radio aids for homing;

(E) turns using magnetic compass, compass errors.

(xix) Exercise 15: Advanced turning:

(A) steep turns (45 °), level and descending;

(B) stalling in the turn and recovery;

(C) recoveries from unusual attitudes, including spiral dives.

(xx) Exercise 16: Forced landing without power:

(A) forced landing procedure;

(B) choice of landing area, provision for change of plan;

(C) gliding distance;

(D) descent plan;

(E) key positions;

(F) engine cooling;

(G) engine failure checks;

(H) use of radio;

(I) base leg;

(J) final approach;

(K) landing;
(L) actions after landing.

(xxii) Exercise 17: Precautionary landing:

(A) full procedure away from aerodrome to break-off height;

(B) occasions necessitating;

(C) in-flight conditions;

(D) landing area selection:

(a) normal aerodrome;

(b) disused aerodrome;

(c) ordinary field.

(E) circuit and approach;

(F) actions after landing.

(xxii) Exercise 18a: Navigation:

(A) flight planning:

(a) weather forecast and actuals;

(b) map selection and preparation:

(1) choice of route;

(2) controlled airspace;

(3) danger, prohibited and restricted areas;

(4) safety altitudes.

(c) calculations:

(1) magnetic heading(s) and time(s) en-route;

(2) fuel consumption;

(3) mass and balance;

(4) mass and performance.

(d) flight information:

(1) NOTAMs etc.;
(2) radio frequencies;
(3) selection of alternate aerodromes.

(e) aeroplane documentation;
(f) notification of the flight:
   (1) pre-flight administrative procedures;
   (2) flight plan form.

(B) departure:
   (a) organisation of cockpit workload;
   (b) departure procedures:
       (1) altimeter settings;
       (2) ATC liaison in controlled or regulated airspace;
       (3) setting heading procedure;
       (4) noting of ETAs.
   (c) maintenance of altitude and heading;
   (d) revisions of ETA and heading;
   (e) log keeping;
   (f) use of radio;
   (g) use of navaids;
   (h) minimum weather conditions for continuation of flight;
   (i) in-flight decisions;
   (j) transiting controlled or regulated airspace;
   (k) diversion procedures;
   (l) uncertainty of position procedure;
   (m) lost procedure.

(C) arrival and aerodrome joining procedure:
   (a) ATC liaison in controlled or regulated airspace;
   (b) altimeter setting;
(c) entering the traffic pattern;
(d) circuit procedures;
(e) parking;
(f) security of aeroplane;
(g) refueling;
(h) closing of flight plan, if appropriate;
(i) post-flight administrative procedures.

(xxiii) Exercise 18b: Navigation problems at lower levels and in reduced visibility:

(A) actions before descending;
(B) hazards (for example obstacles and terrain);
(C) difficulties of map reading;
(D) effects of wind and turbulence;
(E) vertical situational awareness (avoidance of controlled flight into terrain);
(F) avoidance of noise sensitive areas;
(G) joining the circuit;
(H) bad weather circuit and landing.

(xxiv) Exercise 18c: Radio navigation:

(A) use of GNSS:
   (a) selection of waypoints;
   (b) to or from indications and orientation;
   (c) error messages.

(B) use of VHF Omni range:
   (a) availability, AIP and frequencies;
   (b) selection and identification;
   (c) OBS;
(d) to or from indications and orientation;
(e) CDI;
(f) determination of radial;
(g) intercepting and maintaining a radial;
(h) VOR passage;
(i) obtaining a fix from two VORs.

(C) use of ADF equipment: NDBs:
(a) availability, AIP and frequencies;
(b) selection and identification;
(c) orientation relative to the beacon;
(d) homing.

(D) use of VHF/DF:
(a) availability, AIP, frequencies;
(b) R/T procedures and ATC liaison;
(c) obtaining a QDM and homing.

(E) use of en-route or terminal radar:
(a) availability and AIP;
(b) procedures and ATC liaison;
(c) pilot’s responsibilities;
(d) secondary surveillance radar:
   (1) transponders;
   (2) code selection;
   (3) interrogation and reply.

(F) use of DME:
(a) station selection and identification;
(b) modes of operation: distance, groundspeed and time to run.
(xxv) Exercise 19: Basic instrument flight:

(A) physiological sensations;
(B) instrument appreciation; attitude instrument flight;
(C) instrument limitations;
(D) basic manoeuvres:

(a) straight and level at various air speeds and configurations;
(b) climbing and descending;
(c) standard rate turns, climbing and descending, onto selected headings;
(d) recoveries from climbing and descending turns.

(d) BITD

(1) A BITD may be used for flight training for:

(i) flight by reference solely to instruments;
(ii) navigation using radio navigation aids;
(iii) basic instrument flight.

(2) The use of the BITD should be subject to the following:

(i) the training should be complemented by exercises on an aeroplane;
(ii) the record of the parameters of the flight must be available;
(iii) A FI (A) or STI (A) should conduct the instruction.

AMC1 MFCL.210.H PPL (H) — Experience requirements and crediting

FLIGHT INSTRUCTION FOR THE PPL (H)

(a) Entry to training
Before being accepted for training an applicant should be informed that the appropriate medical certificate must be obtained before solo flying is permitted.

(b) Ground instruction
Enhanced ground instruction in weather interpretation, planning and route assessment, decision making on encountering DVE including reversing course or conducting a precautionary landing.

(c) Flight instruction
(1) The PPL(H) flight instruction syllabus should take into account the principles of threat and error management and cover:

(i) pre-flight operations, including mass and balance determination, helicopter inspection and servicing;

(ii) aerodrome and traffic pattern operations, collision avoidance precautions and procedures;

(iii) control of the helicopter by external visual reference;

(iv) take-offs, landings, hovering, look-out turns and normal transitions from and to the hover;

(v) emergency procedures, basic autorotations, simulated engine failure, ground resonance recovery if relevant to type;

(vi) sideways and backwards flight, turns on the spot;

(vii) incipient vortex ring recognition and recovery;

(viii) touchdown autorotations, simulated engine-off landings, practice forced landings. Simulated equipment malfunctions and emergency procedures relating to malfunctions of engines, controls, electrical and hydraulic circuits;

(ix) steep turns;

(x) transitions, quick stops, out of wind manoeuvres, sloping ground landings and take-offs;

(xi) limited power and confined area operations, including selection of operations to and from unprepared sites;

(xii) flight by sole reference to basic flight instruments, including completion of a level 180 ° turn and recovery from unusual attitudes to simulate inadvertent entry into cloud (this training may be conducted by an FI(H));

(xiii) cross-country flying by using visual reference, DR, GNNS and, where available, radio navigation aids; simulation of deteriorating weather conditions and actions to divert or conduct precautionary landing;

(xiv) operations to, from and transiting controlled aerodromes; compliance with air traffic services procedures, communication procedures and phraseology.

(2) Before allowing the applicant for a PPL(H) to undertake his/her first solo flight, the FI should ensure that the applicant can use R/T communication.

(3) Wherever possible, flight simulation should be used to demonstrate to
student pilots the effects of flight into DVE and to enhance their understanding and need for avoidance of this potentially fatal flight regime.

(d) Syllabus of flight instruction

(1) The numbering of exercises should be used primarily as an exercise reference list and as a broad instructional sequencing guide; therefore the demonstrations and practices need not necessarily be given in the order listed. The actual order and content will depend upon the following interrelated factors:

(i) the applicant’s progress and ability;
(ii) the weather conditions affecting the flight;
(iii) the flight time available;
(iv) instructional technique considerations;
(v) the local operating environment;
(vi) applicability of the exercises to the helicopter.

(2) Each of the exercises involves the need for the applicant to be aware of the needs of good airmanship and look-out, which should be emphasised at all times.

(i) Exercise 1a: Familiarisation with the helicopter:
   (A) characteristics of the helicopter, external features;
   (B) cockpit layout;
   (C) systems;
   (D) checklists, procedures and controls.

(ii) Exercise 1b: Emergency procedures:
   (A) action if fire on the ground and in the air;
   (B) engine, cabin and electrical system fire;
   (C) systems failures;
   (D) escape drills, location and use of emergency equipment and exits.

(iii) Exercise 2: Preparation for and action after flight:
   (A) flight authorisation and helicopter acceptance;
   (B) serviceability documents;
(C) equipment required, maps, etc.;

(D) external checks;

(E) internal checks;

(F) seat, harness and flight controls adjustments;

(G) starting and warm-up checks clutch engagement and starting rotors;

(H) power checks;

(I) running down system checks and switching off the engine;

(J) parking, security and picketing;

(K) completion of authorisation sheet and serviceability documents.

(iv) Exercise 3: Air experience:

(A) to introduce the student to rotary wing flight;

(B) flight exercise.

(v) Exercise 4: Effects of controls:

(A) function of flight controls, primary and secondary effect;

(B) effects of:

(a) air speed;

(b) power changes (torque);

(c) yaw (sideslip);

(d) disc loading (bank and flare);

(e) controls of selecting hydraulics on/off;

(f) control friction.

(C) instruments;

(D) use of carburettor heat or anti-icing control.

(vi) Exercise 5: Power and attitude changes:

(A) relationship between cyclic control position, disc attitude, fuselage attitude and air speed;
(B) flapback;

(C) power required diagram in relation to air speed;

(D) power and air speed changes in level flight;

(E) use of instruments for precision;

(F) engine and air speed limitations.

(vii) Exercise 6: Straight and level:

(A) at normal cruising power, attaining and maintaining straight and level flight;

(B) control in pitch, including use of control friction or trim;

(C) maintaining direction and balance, (ball or yaw string use);

(D) setting power for selected air speeds and speed changes;

(E) use of instruments for precision.

(viii) Exercise 7: Climbing:

(A) optimum climb speed, best angle or rate of climb from power required diagram;

(B) initiation, maintaining the normal and maximum rate of climb, levelling off;

(C) levelling off at selected altitudes or heights;

(D) use of instruments for precision.

(ix) Exercise 8: Descending:

(A) optimum descent speed, best angle or rate of descent from power required diagram;

(B) initiation, maintaining and levelling off;

(C) levelling off at selected altitudes or heights;

(D) descent (including effect of power and air speed);

(E) use of instruments for precision.

(x) Exercise 9: Turning:

(A) initiation and maintaining medium level turns;
DEPARTMENT OF CIVIL AVIATION
MFCL ACCEPTABLE MEANS OF COMPLIANCE AND GUIDANCE MATERIAL

(B) resuming straight flight;
(C) altitude, bank and co-ordination;
(D) climbing and descending turns and effect on rate of climb or descent;
(E) turns onto selected headings, use of gyro heading indicator and compass;
(F) use of instruments for precision.

(xi) Exercise 10: Basic autorotation:
(A) safety checks, verbal warning and look-out;
(B) entry, development and characteristics;
(C) control of air speed and RRPM, rotor and engine limitations;
(D) effect of AUM, IAS, disc loading, G forces and density altitude;
(E) re-engagement and go-around procedures (throttle override or ERPM control);
(F) vortex condition during recovery;
(G) gentle and medium turns in autorotation;
(H) demonstration of variable flare simulated engine off landing.

(xii) Exercise 11a: Hovering:
(A) demonstrate hover IGE, importance of wind effect and attitude, ground cushion, stability in the hover and effects of over controlling;
(B) student holding cyclic stick only;
(C) student handling collective lever (and throttle) only;
(D) student handling collective lever, (throttle) and pedals;
(E) student handling all controls;
(F) demonstration of ground effect;
(G) demonstration of wind effect;
(H) demonstrate gentle forward running touchdown;
(I) specific hazards for example snow, dust and litter.
(xiii) Exercise 11b: Hover taxiing and spot turns:
   (A) revise hovering;
   (B) precise ground speed and height control;
   (C) effect of wind direction on helicopter attitude and control margin;
   (D) control and co-ordination during spot turns;
   (E) carefully introduce gentle forward running touchdown.

(xiv) Exercise 11c: Hovering and taxiing emergencies:
   (A) revise hovering and gentle forward running touchdown, explain (demonstrate where applicable) effect of hydraulics failure in the hover;
   (B) demonstrate simulated engine failure in the hover and hover taxi;
   (C) demonstrate dangers of mishandling and over-pitching.

(xv) Exercise 12: Take-off and landing:
   (A) pre-take-off checks or drills;
   (B) look-out;
   (C) lifting to hover;
   (D) after take-off checks;
   (E) danger of horizontal movement near ground;
   (F) danger of mishandling and overpitching;
   (G) landing (without sideways or backwards movement);
   (H) after landing checks or drills;
   (I) take-off and landing crosswind and downwind.

(xvi) Exercise 13: Transitions from hover to climb and approach to hover:
   (A) look-out;
   (B) revise take-off and landing;
   (C) ground effect, translational lift and its effects;
(D) flapback and its effects;

(E) effect of wind speed and direction during transitions from or to the hover;

(F) the constant angle approach;

(G) demonstration of variable flare simulated engine off landing.

(xvii) Exercise 14a: Circuit, approach and landing:

(A) revise transitions from hover to climb and approach to hover;

(B) circuit procedures, downwind and base leg;

(C) approach and landing with power;

(D) pre-landing checks;

(E) effect of wind on approach and IGE hover;

(F) crosswind approach and landing;

(G) go-around;

(H) noise abatement procedures.

(xviii) Exercise 14b: Steep and limited power approaches and landings:

(A) revise the constant angle approach;

(B) the steep approach (explain danger of high sink rate and low air speed)

(C) limited power approach (explain danger of high speed at touch down);

(D) use of the ground effect;

(E) variable flare simulated engine off landing.

(xix) Exercise 14c: Emergency procedures:

(A) abandoned take-off;

(B) missed approach and go-around;

(C) hydraulic off landing (if applicable);

(D) tail rotor control or tail rotor drive failure (briefing only)
(E) simulated emergencies in the circuit to include:

(a) hydraulics failure;

(b) simulated engine failure on take-off, crosswind, downwind and base leg;

(c) governor failure.

(xx) Exercise 15: First solo:

(A) instructor’s briefing, observation of flight and debriefing;

(B) warn of change of attitude from reduced and laterally displaced weight;

(C) warn of low tail, low skid or wheel during hover, landing;

(D) warn of dangers of loss of RRPM and overpitching;

(E) pre-take-off checks;

(F) into wind take-off;

(G) procedures during and after take-off;

(H) normal circuit, approaches and landings;

(I) action if an emergency.

(xxii) Exercise 16: Sideways and backwards hover manoeuvring:

(A) manoeuvring sideways flight heading into wind;

(B) manoeuvring backwards flight heading into wind;

(C) combination of sideways and backwards manoeuvring;

(D) manoeuvring sideways and backwards and heading out of wind;

(E) stability and weather cocking;

(F) recovery from backwards manoeuvring (pitch nose down);

(G) limitations for sideways and backwards manoeuvring.

(xxii) Exercise 17: Spot turns:

(A) revise hovering into wind and downwind;

(B) turn on spot through 360°:
(a) around pilots position;
(b) around tail rotor;
(c) around helicopter geometric centre;
(d) square and safe visibility clearing turn.

(C) rotor RPM control, torque effect, cyclic limiting stops due to CG position and wind speed and direction.

(xxiii) Exercise 18: Hover OGE and vortex ring:
(A) establishing hover OGE;
(B) drift, height or power control;
(C) demonstration of incipient stage of vortex ring, recognition and recovery (from a safe altitude);
(D) loss of tail rotor effectiveness.

(xxiv) Exercise 19: Simulated EOL:
(A) the effect of weight, disc loading, density attitude and RRPM decay;
(B) revise basic autorotation entry;
(C) optimum use of cyclic and collective to control speed or RRPM;
(D) variable flare simulated EOL;
(E) demonstrate constant attitude simulated EOL;
(F) demonstrate simulated EOL from hover or hover taxi;
(G) demonstrate simulated EOL from transition and low level.

(xxv) Exercise 20: Advanced autorotation:
(A) over a selected point at various height and speed;
(B) revise basic autorotation: note ground distance covered;
(C) range autorotation;
(D) low speed autorotation;
(E) constant attitude autorotation (terminate at safe altitude);
(F) ‘S’ turns;
(G) turns through 180 ° and 360 °;

(H) effects on angles of descent, IAS, RRPM and effect of AUM.

(xxvi) Exercise 21: Practice forced landings:

(A) procedure and choice of the forced landing area;

(B) forced landing checks and crash action;

(C) re-engagement and go-around procedures.

(xxvii) Exercise 22: Steep turns:

(A) steep (level) turns (30 ° bank);

(B) maximum rate turns (45 ° bank if possible);

(C) steep autorotative turns;

(D) faults in the turn: balance, attitude, bank and co-ordination;

(E) RRPM control and disc loading;

(F) vibration and control feedback;

(G) effect of wind at low level.

(xxviii) Exercise 23: Transitions:

(A) revise ground effect, translational lift and flapback;

(B) maintaining constant height, (20-30 ft AGL);

(C) transition from hover to minimum 50 knots IAS and back to hover;

(D) demonstrate effect of wind.

(xxix) Exercise 24: Quick stops:

(A) use of power and controls;

(B) effect of wind;

(C) quick stops into wind;

(D) quick stops from crosswind and downwind terminating into wind;

(E) danger of vortex ring;

(F) danger of high disc loading.
(xxx) Exercise 25a: Navigation:

(A) flight planning:

(a) weather forecast and actuals;

(b) map selection and preparation and use;
   (1) choice of route;
   (2) controlled airspace, danger and prohibited areas;
   (3) safety altitudes and noise abatement considerations.

(c) calculations:
   (1) magnetic heading(s) and time(s) en-route;
   (2) fuel consumption;
   (3) mass and balance.

(d) flight information:
   (1) NOTAMs, etc.;
   (2) radio frequencies;
   (3) selection of alternate landing sites.

(e) helicopter documentation;

(f) notification of the flight:
   (1) pre-flight administrative procedures;
   (2) flight plan form (where appropriate).

(B) departure:

(a) organisation of cockpit workload;

(b) departure procedures:
   (1) altimeter settings;
   (2) ATC liaison in controlled or regulated airspace;
   (3) setting heading procedure;
   (4) noting of ETAs.
(c) maintenance of height or altitude and heading;

(d) revisions of ETA and heading:

(1) 10° line, double track and track error and closing angle;

(2) 1 in 60 rule;

(3) amending an ETA.

(e) log keeping;

(f) use of radio;

(g) use of navaids (if fitted);

(h) minimum weather conditions for continuation of flight;

(i) in-flight decisions;

(j) transiting controlled or regulated airspace;

(k) uncertainty of position procedure;

(l) lost procedure.

(C) arrival and aerodrome joining procedure:

(a) ATC liaison in controlled or regulated airspace;

(b) altimeter setting;

(c) entering the traffic pattern;

(d) circuit procedures.

(e) parking;

(f) security of helicopter;

(g) refueling;

(h) closing of flight plan (if appropriate);

(i) post-flight administrative procedures.

.xxxi Exercise 25b: Navigation problems at low heights and in reduced visibility:

(A) actions before descending;

(B) hazards (for example obstacles and other aircraft);
(C) difficulties of map reading;

(D) effects of wind and turbulence;

(E) avoidance of noise sensitive areas;

(F) actions in the event of encountering DVE;

(G) decision to divert or conduct precautionary landing;

(H) bad weather circuit and landing;

(I) appropriate procedures and choice of landing area;

(J) precautionary landing.

(xxxii) Exercise 25c: Radio navigation:

(A) use of GNSS:
   (a) selection of waypoints;
   (b) to or from indications and orientation;
   (c) error messages;
   (d) hazards of over-reliance on the use of GNSS in the continuation of flight in DVE.

(B) use of VHF Omni range:
   (a) availability, AIP and frequencies;
   (b) selection and identification;
   (c) OBS;
   (d) to or from indications and orientation;
   (e) CDI;
   (f) determination of radial;
   (g) intercepting and maintaining a radial;
   (h) VOR passage;
   (i) obtaining a fix from two VORs.

(C) use of ADF equipment: NDBs:
   (a) availability, AIP and frequencies;
   (b) selection and identification;
(c) orientation relative to the beacon;
(d) homing.

(D) use of VHF/DF:
(a) availability, AIP and frequencies;
(b) RTF procedures and ATC liaison;
(c) obtaining a QDM and homing.

(E) use of en-route or terminal radar:
(a) availability and AIP;
(b) procedures and ATC liaison;
(c) pilots responsibilities;
(d) secondary surveillance radar (if transponder fitted):
   (1) transponders;
   (2) code selection;
   (3) interrogation and reply.

(F) use of DME:
(a) station selection and identification;
(b) modes of operation: distance, groundspeed and time to run.

(exxxxiii)Exercise 26: Advanced take-off, landings and transitions:
(A) landing and take-off out of wind (performance reduction);
(B) ground effect, translational lift and directional stability variation when out of wind;
(C) downwind transitions;
(D) vertical take-off over obstacles;
(E) running take-off;
(F) cushion creep take-off;
(G) reconnaissance of landing site;
(H) running landing;
(I) zero speed landing;
(J) crosswind and downwind landings;
(K) steep approach;
(L) go-around.

(xxxiv) Exercise 27: Sloping ground:

(A) limitations and assessing slope angle;
(B) wind and slope relationship: blade and control stops;
(C) effect of CG when on slope;
(D) ground effect on slope and power required;
(E) right skid up slope;
(F) left skid up slope;
(G) nose up slope;
(H) avoidance of dynamic roll over, dangers of soft ground and sideways movement on touchdown;
(I) danger of striking main or tail rotor by harsh control movement near ground.

(xxxv) Exercise 28: Limited power:

(A) take-off power check;
(B) vertical take-off over obstacles;
(C) in-flight power check;
(D) running landing;
(E) zero speed landing;
(F) approach to low hover;
(G) approach to hover;
(H) approach to hover OGE;
(I) steep approach;
(J) go-around.

(xxxvi) Exercise 29: Confined areas:
(A) landing capability and performance assessment;
(B) locating landing site and assessing wind speed and direction;
(C) reconnaissance of landing site;
(D) select markers;
(E) select direction and type of approach;
(F) circuit;
(G) approach to committed point and go-around;
(H) approach;
(I) clearing turn;
(J) landing;
(K) power check and performance assessment in and out of ground effect;
(L) normal take-off to best angle of climb speed;
(M) vertical take-off from hover.

(37) Exercise 30: Basic instrument flight:

(A) Physiological Sensations

(B) Instrument appreciation
   (a) Attitude instrument flight
   (b) Instrument scan

(C) Instrument limitations

(D) Basic manoeuvres
   (a) Straight and level at various air speeds and configurations;
   (b) climbing and descending;
   (c) standard rate turns, climbing and descending, onto selected headings.

(E) recoveries from climbing and descending turns;
(F) recoveries from unusual attitudes.
Exercise 31a: Night flying (if night rating required):

(A) pre-flight inspection using torch, pan lights, etc.;
(B) take-off (no sideways or backwards manoeuvring);
(C) hover taxi (higher and slower than by day);
(D) transition to climb;
(E) level flight;
(F) approach and transition to hover;
(G) landing;
(H) autorotation;
(I) practice forced landing (with flares if appropriate: simulated);
(J) night emergencies (for example failure of lights, etc.).

Exercise 31b: Night cross-country (if night rating required):

(A) navigation principles as for day cross-country;
(B) map marking (highlighting built-up areas with thicker lines, etc.).

AMC1 MFCL.210.As PPL (As) — Experience requirements and crediting

FLIGHT INSTRUCTION FOR THE PPL (AS)

(a) Entry to training
Before being accepted for training an applicant should be informed that the appropriate medical certificate must be obtained before solo flying is permitted.

(b) Flight instruction

(1) The PPL(As) flight instruction syllabus should take into account the principles of threat and error management and cover:

(i) pre-flight operations, including mass and balance determination, airship inspection and servicing;
(ii) ground manoeuvring, masting and unmasting procedures;
(iii) aerodrome and traffic pattern operations, collision avoidance precautions and procedures;
(iv) control of the airship by external visual reference;
(v) take-offs and landings;
(vi) flight by reference solely to instruments, including the completion of a level 180 ° turn;

(vii) cross-country flying using visual reference, dead reckoning and radio navigation aids;

(viii) emergency operations, including simulated airship equipment malfunctions;

(ix) operations to, from and transiting controlled aerodromes, compliance with air traffic services procedures, communication procedures and phraseology.

(2) Before allowing the applicant for a PPL (As) to undertake his/her first solo flight, the FI should ensure that the applicant can use R/T communication.

(c) Syllabus of flight instruction

(1) The numbering of exercises should be used primarily as an exercise reference list and as a broad instructional sequencing guide; therefore the demonstrations and practices need not necessarily be given in the order listed. The actual order and content will depend upon the following interrelated factors:

(i) the applicant’s progress and ability;

(ii) the weather conditions affecting the flight;

(iii) the flight time available;

(iv) instructional technique considerations;

(v) the local operating environment;

(vi) applicability of the exercises to the airship.

(2) Each of the exercises involves the need for the applicant to be aware of the needs of good airmanship and look-out, which should be emphasised at all times.

(i) Exercise 1a: Familiarisation with the airship:

(A) characteristics of the airship;

(B) cockpit layout;

(C) systems;

(D) checklists, drills and controls.

(ii) Exercise 1b: Emergency drills:

(A) action if fire on the ground and in the air;
(B) engine cabin and electrical system fire;

(C) systems failure;

(D) escape drills, location and use of emergency equipment and exits.

(iii) Exercise 2: Preparation for and action after flight:

(A) flight authorisation and airship acceptance;

(B) serviceability documents;

(C) equipment required, maps, etc.;

(D) mass and balance;

(E) external checks;

(F) ground crew briefing;

(G) internal checks;

(H) harness, seat or rudder panel adjustments;

(I) starting and warm-up checks;

(J) power checks;

(K) running down system checks and switching off the engine;

(L) parking, security and masting;

(M) completion of authorization sheet and serviceability documents.

(iv) Exercise 3: Air experience: flight exercise.

(v) Exercise 4: Effects of controls:

(A) primary effects;

(B) further effects;

(C) effects of:

(a) air speed;

(b) power;

(c) trimming controls;
(d) other controls, as applicable.

(D) operation of:

(a) mixture control;

(b) carburettor heat;

(c) cabin heating or ventilation.

(vi) Exercise 5: Ground manoeuvring:

(A) pre-taxi checks;

(B) starting, control of speed and stopping;

(C) engine handling;

(D) masting procedures;

(E) control of direction and turning;

(F) effects of wind;

(G) effects of ground surface;

(H) marshalling signals;

(I) instrument checks;

(J) air traffic control procedures;

(K) emergencies.

(vii) Exercise 6a: Take-off procedures:

(A) pre-take-off checks;

(B) take-off with different static heaviness;

(C) drills during and after take-off;

(D) noise abatement procedures.

(viii) Exercise 6b: Emergencies:

(A) abandoned take-off;

(B) engine failure after take-off;

(C) malfunctions of thrust vector control;

(D) aerodynamic control failures;
(E) electrical and system failures.

(ix) Exercise 7: Climbing:

(A) entry, maintaining the normal and max rate climb and levelling off;
(B) levelling off at selected altitudes;
(C) maximum angle of climb;
(D) maximum rate of climb.

(x) Exercise 8: Straight and level:

(A) attaining and maintaining straight and level flight;
(B) flight at or close to pressure height;
(C) control in pitch, including use of trim;
(D) at selected air speeds (use of power);
(E) during speed changes;
(F) use of instruments for precision.

(xi) Exercise 9: Descending:

(A) entry, maintaining and levelling off;
(B) levelling off at selected altitudes;
(C) maximum rate of descent;
(D) maximum angle of descent;
(E) use of instruments for precision flight.

(xii) Exercise 10: Turning:

(A) entry and maintaining level turns;
(B) resuming straight flight;
(C) faults in the turn;
(D) climbing turns;
(E) descending turns;
(F) turns onto selected headings, use of gyro heading indicator and compass;
(G) use of instruments for precision.
(xiii) Exercise 11: Hovering: hovering manoeuvres (as applicable);

(xiv) Exercise 12a: Approach and landing:
(A) effect of wind on approach and touchdown speeds;
(B) landing with different static heaviness;
(C) missed approach and go-around procedures;
(D) noise abatement procedures.

(xv) Exercise 12b: Emergencies:
(A) aborted approach or go-around;
(B) malfunction of thrust vector control;
(C) envelope emergencies;
(D) fire emergencies;
(E) aerodynamic control failures;
(F) electrical and system failures.

(xvi) Exercise 13: Precautionary landing:
(A) occasions necessitating;
(B) in-flight conditions;
(C) landing area selection;
(D) circuit and approach;
(E) actions after landing;

(xvii) Exercise 14a: Navigation:
(A) flight planning:
   (a) weather forecast and actuals;
   (b) map selection and preparation:
      (1) choice of route;
      (2) airspace structure;
      (3) sensitive areas;
      (4) safety altitudes.
(c) calculations:
   (1) magnetic heading(s) and time(s) en-route;
   (2) fuel consumption;
   (3) mass and balance;
   (4) performance.

(d) flight information:
   (1) NOTAMs etc.;
   (2) radio frequencies;
   (3) selection of alternate aerodromes.

(e) airship documentation;

(f) notification of the flight:
   (1) pre-flight administrative procedures;
   (2) flight plan form.

(B) departure:

(a) organisation of cockpit workload;

(b) departure procedures:
   (1) altimeter settings;
   (2) ATC liaison in controlled or regulated airspace;
   (3) setting heading procedure;
   (4) noting of ETAs.

(c) maintenance of altitude and heading;

(d) revisions of ETA and heading;

(e) log keeping;

(f) use of radio;

(g) use of navaids;

(h) minimum weather conditions for continuation of flight;

(i) in-flight decisions;
(j) transiting controlled or regulated airspace;
(k) diversion procedures;
(l) uncertainty of position procedure;
(m) lost procedure.

(C) arrival, aerodrome joining procedure:
(a) ATC liaison in controlled or regulated airspace;
(b) altimeter setting;
(c) entering the traffic pattern;
(d) circuit procedures;
(e) parking or on masting;
(f) security of airship;
(g) refueling;
(h) closing of flight plan, if appropriate;
(i) post-flight administrative procedures.

(xvii) Exercise 14b: Navigation problems at lower levels and in reduced visibility:

(A) actions before descending;
(B) hazards (for example obstacles, and terrain);
(C) difficulties of map reading;
(D) effects of winds, turbulence and precipitation;
(E) vertical situational awareness;
(F) avoidance of noise sensitive areas;
(G) joining the circuit;
(H) bad weather circuit and landing.

(xviii) Exercise 14c: Radio navigation:

(A) use of GNSS

(a) selection of waypoints;
(b) to or from indications and orientation;
(c) error messages.

(B) use of VHF Omni range (if applicable):
(a) availability, AIP and frequencies;
(b) selection and identification;
(c) OBS;
(d) to or from indications and orientation;
(e) CDI;
(f) determination of radial;
(g) intercepting and maintaining a radial;
(h) VOR passage;
(i) obtaining a fix from two VORs.

(C) use of ADF equipment: NDBs (if applicable):
(a) availability, AIP and frequencies;
(b) selection and identification;
(c) orientation relative to the beacon;
(d) homing.

(D) use of VHF/DF:
(a) availability, AIP and frequencies;
(b) R/T procedures and ATC liaison;
(c) obtaining a QDM and homing.

(E) use of en-route or terminal radar:
(a) availability and AIP;
(b) procedures and ATC liaison;
(c) pilot’s responsibilities;
(d) secondary surveillance radar:
   (1) transponders;
(2) code selection;
(3) interrogation and reply.

(F) use of DME (if applicable);
   (a) station selection and identification;
   (b) modes of operation: distance, groundspeed and time to run.

(xx) Exercise 15: Basic instrument flight:
   (A) physiological sensations;
   (B) instrument appreciation: attitude instrument flight;
   (C) instrument limitations;
   (D) basic manoeuvres:
      (a) straight and level;
      (b) climbing and descending;
      (c) turns, climbing and descending, onto selected headings;
      (d) recoveries from climbing and descending turns.

(d) BITD
   (1) A BITD may be used for flight training for:
      (i) flight by reference solely to instruments;
      (ii) navigation using radio navigation aids;
      (iii) basic instrument flight.
   (2) The use of the BITD should be subject to the following:
      (i) the training should be complemented by exercises on an airship;
      (ii) the record of the parameters of the flight must be available; and an FI (As) should conduct the instruction.

AMC1 MFCL.205.S (b) SPL — Privileges and conditions

CONTENTS OF THE PROFICIENCY CHECK FOR THE EXTENSION OF SPL PRIVILEGES TO EXERCISE COMMERCIAL PRIVILEGES ON A SAILPLANE

(a) The applicant should be responsible for the flight planning and should ensure that all equipment and documentation for the execution of the flight are on board.
(b) An applicant should indicate to the FE the checks and duties carried out. Checks should be completed in accordance with the authorised checklist for the sailplane on which the test is being taken.

FLIGHT TEST TOLERANCE

(c) The applicant should demonstrate the ability to:

1. operate the sailplane within its limitations;
2. complete all manoeuvres with smoothness and accuracy;
3. exercise good judgment and airmanship;
4. apply aeronautical knowledge;
5. maintain control of the sailplane at all times in such a manner that the successful outcome of a procedure or manoeuvre is never seriously in doubt.

CONTENT OF THE SKILL TEST

(d) The applicant should demonstrate his/her skill in at least the winch or aerotow method of launching.

SECTION 1 PRE-FLIGHT OPERATIONS AND TAKE-OFF

Uses of checklist, airmanship, control of sailplane by external visual reference, look-out procedures, etc. apply in all sections.

**AMC MFCL.205.B (b) BPL — Privileges and conditions**
CONTENTS OF THE PROFICIENCY CHECK FOR EXTENSION OF BPL PRIVILEGES TO EXERCISE COMMERCIAL PRIVILEGES ON A BALLOON

(a) The take-off site should be chosen by the applicant depending on the actual meteorological conditions, the area which has to be overflown and the possible options for suitable landing sites. The applicant should be responsible for the flight planning and should ensure that all equipment and documentation for the execution of the flight are on board. The proficiency check may be conducted in two flights. The total duration of the flight(s) should be at least 60 minutes.

(b) An applicant should indicate to the FE the checks and duties carried out. Checks should be completed in accordance with the flight manual or the authorised checklist for the balloon on which the test is being taken. During pre-flight preparation for the test the applicant should be required to perform crew and passenger briefings and demonstrate crowd control. The load calculation should be performed by the applicant in compliance with the operations manual or flight manual for the balloon used.

SECTION 1 PRE-FLIGHT OPERATIONS, INFLATION AND TAKE-OFF

Use of checklist, airmanship, control of balloon by external visual reference, look-out procedures, etc. apply in all sections

<p>| | |</p>

<td>d</td>
<td>Pre-landing checks</td>
</tr>
</tbody>
</table>

FLIGHT TEST TOLERANCE

(c) The applicant should demonstrate the ability to:

(1) operate the balloon within its limitations;

(2) complete all manoeuvres with smoothness and accuracy;

(3) exercise good judgment and airmanship;

(4) apply aeronautical knowledge;

(5) maintain control of the balloon at all times in such a manner that the successful outcome of a procedure or manoeuvre is never seriously in doubt.

(d) The following limits are for general guidance. The FE should make allowance for turbulent conditions and the handling qualities and performance of the hot-air balloon used:

Height

<p>| | |</p>
<table>

e Oral questions

**AMC1 MFCL.225.B BPL — Extension of privileges to another balloon class or group**

(a) The aim of the flight training is to qualify BPL holders to exercise the privileges on a different class or group of balloons.

(b) The following classes should be recognised:

(1) hot-air balloons;

(2) gas balloons;

(3) hot-air airships.

(c) The following groups should be recognised:

(1) group A:

   (i) hot-air balloons and hot-air airships with a maximum envelope capacity of 3 400m³;

   (ii) gas balloons with a maximum envelope capacity of 1 260m³.

(2) group B:

   (i) hot-air balloons and hot-air airship with an envelope capacity between 3 401m³ and 6 000m³;

   (ii) gas balloons with an envelope capacity of more than 1 260m³.

(3) group C:

   hot-air balloons and hot-air airship with an envelope capacity between 6 001m³ and 10 500m³.

(4) group D:

   hot-air balloons and hot-air airships with an envelope capacity of more than 10 500m³.

(d) An extension to group B is also valid for group A. The extension for the group C is also valid for the groups A and B. An extension to group D will include the privilege for the other three groups.

(e) The ATO should issue a certificate of satisfactory completion of the instruction to license endorsement.
### Chapter D — Commercial Pilot Licence — CPL

**AMC1 MFCL.310; MFCL.515 (b); MFCL.615 (b)**

**Syllabus of Theoretical Knowledge for the ATPL, CPL and IR**

The following tables contain the detailed theoretical knowledge syllabus for the ATPL, CPL and IR. Aspects related to non-technical skills shall be included in an integrated manner, taking into account the particular risks associated to the license and the activity.

The applicable items for each license or rating are marked with ‘x’. An ‘x’ on the main title of a subject means that all the sub-divisions are applicable.

**(a) Aeroplanes and helicopters**

### 4. FLIGHT PERFORMANCE AND PLANNING

#### 4.1. MASS AND BALANCE: AIRSHIPS

- PURPOSE OF MASS AND BALANCE LOADING
- FUNDAMENTALS OF CG CALCULATIONS
- MASS AND BALANCE DETAILS OF AIRCRAFT
- DETERMINATION OF CG POSITION
- PASSENGER, CARGO AND BALLAST HANDLING

#### 4.2. FLIGHT PLANNING AND FLIGHT MONITORING

- FLIGHT PLANNING FOR VFR FLIGHTS
- FLIGHT PLANNING FOR IFR FLIGHTS
- FUEL PLANNING
- PRE-FLIGHT PREPARATION
- ATS FLIGHT PLAN
- FLIGHT MONITORING AND IN-FLIGHT RECORDING

#### 4.3. PERFORMANCE: AIRSHIPS

- AIRWORTHINESS REQUIREMENTS
- BASICS OF AIRSHIP PERFORMANCE
- DEFINITIONS AND TERMS
- STAGES OF FLIGHT
- USE OF FLIGHT MANUAL

### 5. HUMAN PERFORMANCE

- HUMAN FACTORS: BASIC CONCEPTS
- BASIC AVIATION PHYSIOLOGY AND HEALTH MAINTENANCE

### 6. METEOROLOGY

- THE ATMOSPHERE
- WIND
- THERMODYNAMICS

CHAPTER F — AIRLINE TRANSPORT PILOT LICENCE — ATPL

AMC1 MFCL.510.A (b) (1) ATPL (A) Prerequisites, experience and crediting

Equivalent requirements for CS-25 and CS-23 commuter category are the JAR/FAR-25 transport category, JAR/FAR-23 commuter category, or BCAR or AIR 2051.

AMC1 MFCL.520.A; MFCL.520.H

ATPL SKILL TEST

The ATPL skill test may serve at the same time as a skill test for the issue of the license and a proficiency check for the revalidation of the type rating for the aircraft used in the test and may be combined with the skill test for the issue of a MP type rating.
CHAPTER G — INSTRUMENT RATING — IR

AMC1 MFCL.615(b) IR – Theoretical knowledge and flight instruction

SYLLABUS OF THEORETICAL KNOWLEDGE FOR THE IR FOLLOWING THE COMPETENCY-BASED MODULAR COURSE AND EIR

(a) The following tables contain the detailed theoretical knowledge syllabus for the IR following the competency-based modular route (IR(A)) and the EIR.

(b) Aspects related to non-technical skills should be included in an integrated manner, taking into account the particular risks associated to the license and the activity.

(c) The applicant who has completed a modular IR (A) course according to Appendix 6 A and passed the IR (A) theoretical knowledge examination should be fully credited towards the requirements of theoretical knowledge instruction and examination for a competency-based IR (A) or EIR within the validity period of the examination. An applicant wishing to transfer to a competency-based IR (A) or EIR course during a modular IR (A) course should be credited towards the requirements of theoretical knowledge instruction and examination for a competency-based IR (A) or EIR for those subjects or theory items already completed.

(d) The applicant for an IR (A) who has completed an EIR theoretical knowledge course and passed the EIR theoretical knowledge examination according to FCL.825 should be fully credited towards the requirements of theoretical knowledge instruction and examination for a competency-based IR (A) according to Annex 6 Aa.

<td>Pitot/static system: design and errors</td>
<td></td>
</tr>
<tr>
<td>-------------</td>
<td>----------------------------------</td>
<td></td>
</tr>
</tbody>
</table>
| **LO** | Describe the design and the operating principle of a:  
— static source  
— Pitot tube  
— combined Pitot/static probe |
| **LO** | For each of these indicate the various locations, describe the following associated errors:  
— position errors  
— instrument errors -errors due to a non-longitudinal axial flow (including manoeuvre-induced errors), and the means of correction and/or compensation |
| **LO** | Explain the purpose of heating and interpret the effect of heating on sensed pressure |
| **LO** | List the affected instruments and explain the consequences for the pilot in case of a malfunction including blockage and leakage |
| **LO** | Describe alternate static sources and their effects when used |
| 022 02 04 00 | Altimeter |
| **LO** | Define the following terms: -height, altitude, -indicated altitude, true altitude, -pressure altitude, density altitude |
| **LO** | Define the following barometric references: QNH, QFE, 1013.25 hPa |
| **LO** | Explain the operating principles of an altimeter |
| **LO** | Describe and compare the following three types of altimeters:  
— simple altimeter (single capsule)  
— sensitive altimeter (multi capsule)  
— servo-assisted altimeter |
| LO | Give examples of associated displays: pointer, multi pointer, drum, vertical straight scale | X |
| LO | Describe the following errors:  
— Pitot/static system errors  
— temperature error (air column not at ISA conditions)  
— time lag (altimeter response to change of height) and the means of correction | X |
| LO | Give examples of altimeter corrections table from an Aircraft Operations Manual (AOM) | X |
| LO | Describe the effects of a blockage or a leakage on the static pressure line | X |
| **022 02 05 00** | **Vertical Speed Indicator (VSI)** |  |
| LO | Explain the operating principles of a VSI | X |
| LO | Describe and compare the following two types of vertical speed indicators:  
— barometric type  
— inertial type (inertial information provided by an Inertial Reference Unit) |  |
| LO | Describe the following VSI errors:  
— Pitot/static system errors  
— time lag and the means of correction |  |
| LO | Describe the effects on a VSI of a blockage or a leakage on the static pressure line |  |
| **022 02 06 00** | **Airspeed Indicator (ASI)** |  |
| LO | Define IAS, CAS, EAS, TAS and state and explain the relationship between these speeds |  |
| LO | Describe the following ASI errors and state when they must be considered:  
— Pitot/static system errors  
— compressibility error  
— density error |  |
| LO | Explain the operating principles of an ASI (as appropriate to aeroplanes or helicopters) |
| LO | Describe the effects on an ASI of a blockage or a leak in the static and/or total pressure line(s) |
| 022 03 00 00 | MAGNETISM — DIRECT READING COMPASS AND FLUX VALVE |
| 022 04 00 00 | GYROSCOPIC INSTRUMENTS |
| 022 04 01 00 | Gyroscope: basic principles |
| LO | Define a gyro |
| LO | Explain the fundamentals of the theory of gyroscopic forces |
| LO | Define the degrees of freedom of a gyro Remark: As a convention, the degrees of freedom of a gyroscope do not include its own axis of rotation (the spin axis) |
| 022 04 02 00 | Rate of turn indicator /-Turn Co-ordinator — Balance (Slip) Indicator |
| LO | Explain the purpose of a rate of turn and balance (slip) indicator |
| LO | Define a rate-one turn |
| LO | Explain the relation between bank angle, rate of turn and TAS |
| LO | Explain why the indication of a rate of turn indicator is only correct for one TAS and when turn is coordinated |
| LO | Explain the purpose of a balance (slip) indicator |
| LO | Describe the indications of a rate of turn and balance (slip) indicator during a balanced, slip or skid turn |
| LO | Describe the construction and principles of operation of a Turn Co-ordinator (or Turn and Bank Indicator) |
| LO | Compare the rate of turn indicator and the turn coordinator |
| 022 04 03 00 | Attitude Indicator (Artificial Horizon) |
| LO | Explain the purpose of the attitude indicator |
| LO | Describe the different designs and principles of operation of attitude indicators (air driven, electric) |
| LO | Describe the attitude display and instrument markings |
### Directional Gyroscope

**LO** Explain the purpose of the directional gyroscope

**LO** Describe the following two types of directional gyroscopes:
- Air driven directional gyro
- Electric directional gyro

### Solid-State Systems — AHRS

**LO** Describe the basic principle of a solid-state Attitude and Heading Reference System (AHRS) using a solid state 3-axis rate sensor, 3-axis accelerometer and a 3-axis magnetometer

### Alerting Systems, Proximity Systems

### Integrated Instruments — Electronic Displays

**022 13 01 00** Electronic display units

**022 13 01 01** Design, limitations

**LO** List the different technologies used e.g. CRT and LCD and the associated limitations:
- cockpit temperature
- glare

### Mechanical Integrated Instruments: ADI/HSI

**LO** Describe an Attitude and Director Indicator (ADI) and a Horizontal Situation Indicator (HSI)

**LO** List all the information that can be displayed for either instruments

### Electronic Flight Instrument Systems (EFIS)

**022 13 03 00** Electronic Flight Instrument Systems (EFIS)

**022 13 03 01** Design, operation

**LO** List and describe the different components of an EFIS

<td>Calculate the terrain clearance and the lowest usable flight level for given atmospheric temperature and pressure conditions</td>
<td></td>
</tr>
</tbody>
</table>

**Note:** The following rules shall be considered for altimetry calculations:

- a. All calculations are based on rounded pressure values to the nearest lower hPa.
- b. The value for the barometric lapse rate near mean sea level is 27 ft (8 m) per 1 hPa.
- c. To determine the true altitude/height the following rule of rhumb, called the '4 %-rule', shall be used: the altitude/height changes by 4 % for each 10°C temperature deviation from ISA.
- d. If no further information is given, the deviation of outside air temperature from ISA is considered to be constantly the same given value in the whole layer.
- e. The elevation of the airport has to be taken into account. The temperature correction has to be considered for the layer between ground and the position of the aircraft.

<p>| 050 01 06 04 | Effect of accelerated airflow due to topography |
| LO | Describe qualitatively how the effect of accelerated airflow due to topography (Bernoulli effect) affects altimetry | X |
| 050 02 00 00 | WIND |
| 050 02 02 00 | Primary cause of wind |
| 050 02 02 02 | Variation of wind in the friction layer |
| LO | Describe why and how the wind changes direction and speed with height in the friction layer in the northern and in the southern hemisphere (rule of rhumb) |
| LO | Explain the relationship between isobars and wind (direction and speed) Note: Approximate value for variation of wind in the friction layer (values to be used in examinations) |

</tr>
</tbody>
</table>
| LO | Name the three main components of an ILS:  
— The localiser (LLZ)  
— The glide path (GP)  
— Range information (markers or DME) |  |
| LO | State the site locations of the ILS components:  
— The localiser antenna should be located on the extension of the runway centre line at the stop-end  
— The glide path antenna should be located 300 metres beyond the runway threshold, laterally displaced approximately 120 metres to the side of the runway centre line |  |
<p>| LO | Explain that marker beacons produce radiation patterns to indicate predetermined distances from the threshold along the ILS glide path |  |
| LO | Explain that marker beacons are sometimes replaced by a DME paired with the LLZ frequency |  |
| LO | State that in the ILS frequency assigned band 108,0–111,975 MHz, only frequencies with the first decimal odd are ILS frequencies |  |
| LO | State that the LLZ operates in the VHF band 108,0–111,975 MHz according to ICAO Annex 10 |  |
| LO | State that the GP operates in the UHF band | x |
| LO | State that both the LLZ and the GP antenna radiate side lobes (false beams) which could give rise to false centreline and false glide path indication | x |
| LO | Explain that the back beam from the LLZ antenna may be used as a published 'non-precision approach' | x |
| LO | State that according to ICAO Annex 10 the nominal glide path is 3° | x |
| LO | State that according to ICAO DOC 8168, the final approach area contains a fix or facility that permits verification of the ILS glide path/altimeter relationship. The outer marker or DME is usually used for this purpose. | |
| LO | LO 062 02 05 02 Presentation and interpretation | x |
| LO | Describe the ILS identification regarding frequency and Morse code and/or plain text | x |
| LO | Calculate the rate of descent for a 3° glide path angle given the groundspeed of the aircraft using the formula: Rate of descent (ROD) in ft/min = (groundspeed in kt x 10)/2 | x |
| LO | Calculate the rate of descent using the following formula when flying any glide path angle: ROD ft/min = Speed factor (SF) x glide path angle x 100 | x |
| LO | Interpret the markers by sound, modulation, and frequency | x |
| LO | State that the outer marker cockpit indicator is coloured blue, the middle marker amber and the inner marker white | x |
| LO | State that a failure of either the LLZ or the GP to stay within predetermined limits will cause: — Removal of identification and navigation components from the carrier — Radiation to cease — A warning to be displayed at the designated control point | x |
| LO | State that an ILS receiver has an automatic monitoring function | x |
| LO | Interpret the indications on a Course Deviation Indicator (CDI) and a Horizontal Situation Indicator (HSI): |
| | — Full scale deflection of the CDI needle corresponds to approximately 2,5° displacement from the ILS centre line |
| | — Full scale deflection on the GP corresponds to approximately 0,7° from the ILS GP centre line |
| LO | Interpret the aircraft’s position in relation to the extended runway centre line on a back-beam approach |
| LO | Explain the setting of the course pointer of an HSI for front-beam and back-beam approaches |
| 062 02 05 03 | Coverage and Range |
| LO | Sketch the standard coverage area of the LLZ and GP with angular sector limits in degrees and distance limits from the transmitter in accordance with ICAO Annex 10: |
| | — LLZ coverage area is 10° on either side of the centre line to a distance of 25 NM from the runway, and 35° on either side of the centre line to a distance of 17 NM from the runway |
| | — GP coverage area is 8° on either side of the centre line to a distance of minimum 10 NM from the runway |
| 062 02 05 04 | Errors and accuracy |
| LO | Explain that ILS approaches are divided into facility performance categories defined in ICAO Annex 10 |
| LO | Explain the following in accordance with ICAO DOC 8168: |
| | — The accuracy the pilot has to fly the ILS localiser to be considered established on an ILS track is within half full scale deflection of the required track |
| | — The aircraft has to be established within half scale deflection of the LLZ before starting descent on the GP |
| | — The pilot has to fly the ILS GP to a maximum of half scale fly-up deflection of the GP in order to stay in protected airspace |
| LO | State that if a pilot deviates by more than half scale deflection on the LLZ or by more than half course fly-up deflection on the GP, an immediate missed approach should be executed, because obstacle clearance may no longer be guaranteed |</p>

**ELEMENTARY SURVEILLANCE**

| LO | Explain that the elementary surveillance provides the ATC controller with aircraft position, altitude and identification |
| LO | State that the elementary surveillance needs MODE S transponders with surveillance identifier (SI) code capacity and the automatic reporting of aircraft identification, known as ICAO level 2s |
| LO | State that the SI code must correspond to the aircraft identification specified in item 7 of the ICAO flight plan or to the registration marking |
### Errors and Accuracy

**LO** Explain the following disadvantages of SSR (mode A/C):
- Code garbling of aircraft less than 1.7 NM apart measured in the vertical plane perpendicular to and from the antenna
- 'Fruiting' which results from reception of replies caused by interrogations from other radar stations

### AREA NAVIGATION SYSTEMS, RNAV/FMS

#### 062 05 00 00

**General philosophy and definitions**

**062 05 01 00** Basic RNAV (B-RNAV)/precision RNAV (P-RNAV)/ RNP-PNAV

**LO** Define area navigation RNAV (ICAO Annex 11). A method of navigation permitting aircraft operations on any desired track within the coverage of station-referenced navigation signal, or within the limits of a self-contained navigation system

**LO** State that basic RNAV (B-RNAV) systems require RNP 5

**LO** State that precision RNAV (PRNAV) systems require RNP 1

#### 062 05 01 02

**Principles of 2D RNAV, 3D RNAV and 4D RNAV**

**LO** State that a 2D RNAV system is able to navigate in the horizontal plane only

**LO** State that a 3D RNAV system is able to navigate in the horizontal plane and in addition has a guidance capability in the vertical plane

**LO** State that a 4D RNAV system is able to navigate in the horizontal plane, has a guidance capability in the vertical plane and in addition has a timing function

#### 062 05 01 03

**Required Navigation Performance (RNP) in accordance with ICAO DOC 9613**

**LO** State that RNP is a concept that applies to navigation performance within an airspace

**LO** The RNP type is based on the navigation performance accuracy to be achieved within the airspace
| LO  | State that RNP X requires a navigation performance accuracy of □ X NM both lateral and longitudinal 95% of the flying time. (RNP 1 requires a navigation performance of □1 NM both lateral and longitudinal 95% of the flying time) | X |
| LO  | State that RNAV equipment is one requirement, in order to receive approval to operate in a RNP environment | X |
| LO  | State that RNAV equipment operates by automatically determining the aircraft position | X |
| LO  | State the advantages of using RNAV techniques over more conventional forms of navigation:  
— Establishment of more direct routes permitting a reduction in flight distance  
— Establishment of dual or parallel routes to accommodate a greater flow of en-route traffic  
— Establishment of bypass routes for aircraft over flying high-density terminal areas  
— Establishment of alternatives or contingency routes on either a planned or ad hoc basis  
— Establishment of optimum locations for holding patterns — Reduction in the number of ground navigation facilities | X |
| LO  | State that RNP may be specified for a route, a number of routes, an area, volume of airspace or any airspace of defined dimensions | X |
| LO  | State that airborne navigation equipment uses inputs from navigational systems such as VOR/DME, DME/DME, GNSS, INS and IRS. | X |
| LO  | State that aircraft equipped to operate to RNP 1 and better, should be able to compute an estimate of its position error, depending on the sensors being used and time elapsed | X |
| LO  | Indicate navigation equipment failure | X |

**062 05 02 00 Simple 2D RNAV**

<tr>
<td></td>
<td>— In en-route mode full scale deflection on the CDI is 5 NM</td>
</tr>
<tr>
<td></td>
<td>— In approach mode full scale deflection on the CDI is 1¼ NM</td>
</tr>
<tr>
<td></td>
<td>— In VOR/DME mode full scale deflection of the CDI is 10°.</td>
</tr>
</tbody>
</table>

| LO | State that the system is limited to operate within range of selected VOR/DME station |
| 062 05 03 00 | 4D RNAV  
Info:  
The next generation of area navigation equipment allowed the flight crew to navigate on any desired track within coverage of VOR/DME stations |
| 062 05 03 01 | Flight deck equipment |
State that in order to give the flight crew control over the required lateral guidance functions, RNAV equipment should at least be able to perform the following functions:

- Display present position in latitude/longitude or as distance/bearing to selected waypoint;
- Select or enter the required flight plan through the control and display unit (CDU);
- Review and modify navigation data for any part of a flight plan at any stage of flight and store sufficient data to carry out the active flight plan;
- Review, assemble, modify or verify a flight plan in flight, without affecting the guidance output;
- Execute a modified flight plan only after positive action by the flight crew;
- Where provided, assemble and verify an alternative flight plan without affecting the active flight plan;
- Assemble a flight plan, either by identifier or by selection of individual waypoints from the database, or by creation of waypoints from the database, or by creation of waypoints defined by latitude/longitude, bearing/distance parameters or other parameters;
- Assemble flight plans by joining routes or route segments;
- Allow verification or adjustment of displayed position;
- Provide automatic sequencing through waypoints with turn anticipation. Manual sequencing should also be provided to allow flight over, and return to, waypoints;
- Display cross-track error on the CDU;
- Provide time to waypoints on the CDU;
- Execute a direct clearance to any waypoint;
- Fly parallel tracks at the selected offset distance; offset mode should be clearly indicated;
- Purge previous radio updates;
- Carry out RNAV holding procedures (when defined);
- Make available to the flight crew estimates of positional uncertainty, either as a quality factor or by reference to sensor differences from the computed position;
- Conform to WGS-84 geodetic reference system
- Indicate navigation equipment failure.
<table>

**062 05 04 06** Determination of the FMS-position of the aircraft

| LO | State that modern FMS may use a range of sensors for calculating the position of the aircraft including VOR, DME, GPS, IRS and ILS |

**062 06 00 00** GLOBAL NAVIGATION SATELLITE SYSTEMS

**062 06 01 00** GPS/GLONASS/GALILEO

<table>
<thead>
<tr>
<th>062 06 01 01</th>
<th>Principles</th>
</tr>
</thead>
<tbody>
<tr>
<td>LO</td>
<td>State that there are two main Global Navigation Satellite Systems (GNSS) currently in existence with a third which is planned to be fully operational by 2011. They are:</td>
</tr>
<tr>
<td></td>
<td>— USA NAVSTAR GPS (NAVigation System with Timing And Ranging Global Positioning System)</td>
</tr>
<tr>
<td></td>
<td>— Russian GLONASS (GLObal NAvigation Satellite System)</td>
</tr>
<tr>
<td></td>
<td>— European GALILEO</td>
</tr>
<tr>
<td>LO</td>
<td>State that all 3 systems (will) consist of a constellation of satellites which can be used by a suitably equipped receiver to determine position</td>
</tr>
<tr>
<td>---</td>
<td>---</td>
</tr>
<tr>
<td>062 06 01 02</td>
<td>Operation NAVSTAR GPS</td>
</tr>
<tr>
<td>LO</td>
<td>State that there are currently two modes of operation, SPS (Standard Positioning Service) for civilian users, and PPS (Precise Positioning Service for authorised users)</td>
</tr>
<tr>
<td>LO</td>
<td>SPS was originally designed to provide civil users with a less accurate positioning capability than PPS</td>
</tr>
</tbody>
</table>
| LO | Name the three segments as:  
| | — Space segment  
| | — Control segment  
| | — User segment |
| LO | State that the space segment consists of a notional constellation of 24 operational satellites |
| LO | State that it takes 12½ minutes for a GPS receiver to receive all the data frames in the navigation message |
| LO | State that the almanac contains the orbital data about all the satellites in the GPS constellation |
| LO | State that the ephemeris contains data used to correct the orbital data of the satellites due to small disturbances |
| LO | State that the clock correction parameters are data for correction of the satellite time |
| LO | State that UTC parameters are factors determining the difference between GPS time and UTC |
| LO | State that an ionospheric model is currently used to calculate the time delay of the signal travelling through the ionosphere |
| LO | State that the GPS health message is used to exclude unhealthy satellites from the position solution. Satellite health is determined by the validity of the navigation data |
| LO | State that GPS uses the WGS 84 model |
| LO | State that satellites are equipped with atomic clocks, which allow the system to keep very accurate time reference |

**Control Segment**

<table>
<thead>
<tr>
<th>LO</th>
<th>State that the control segment comprises:</th>
</tr>
</thead>
<tbody>
<tr>
<td>— A master control station</td>
<td></td>
</tr>
<tr>
<td>— Ground antenna</td>
<td></td>
</tr>
<tr>
<td>— Monitoring stations</td>
<td></td>
</tr>
</tbody>
</table>

**User Segment**

| LO | State that GPS supplies three-dimensional position fixes and speed data, plus a precise time reference |
| LO | State that the GPS receiver used in aviation is a multi-channel type |
| LO | State that a GPS receiver is able to determine the distance to a satellite, by determining the difference between the time of transmission by satellite and the time of reception |
| LO | State that the initial distance calculated to the satellites is called pseudo range because the difference between the GPS receiver and the satellite time references initially creates an erroneous range |
| LO | State that each range defines a sphere with its centre at the satellite |
| LO | State that three satellites are needed to determine a two-dimensional position |
| LO | State that four spheres are needed to calculate a three dimensional position, hence four satellites are required |
| LO | State that the GPS receiver is able to synchronise to the correct time base when receiving four satellites |
### NAVSTAR GPS Integrity

<table>
<thead>
<tr>
<th>LO</th>
<th>Define RAIM (Receiver Autonomous Integrity Monitoring). A technique whereby a receiver processor determines the integrity of the navigation signals</th>
</tr>
</thead>
<tbody>
<tr>
<td>LO</td>
<td>State that RAIM is achieved by consistency check among pseudo range measurements</td>
</tr>
<tr>
<td>LO</td>
<td>State that basic RAIM requires 5 satellites. A 6th is for isolating a faulty satellite from the navigation solution</td>
</tr>
<tr>
<td>LO</td>
<td>State that when a GPS receiver uses barometric altitude as an augmentation to RAIM, the number of satellites needed for the receiver to perform the RAIM function may be reduced by one</td>
</tr>
</tbody>
</table>

#### 062 06 01 03 Errors and Factors affecting accuracy

<table>
<thead>
<tr>

Dated 04 MARCH 2015
GM1 FCL.615 (b) IR – Theoretical knowledge and flight instruction

DETAILED THEORETICAL KNOWLEDGE SYLLABUS AND LEARNING OBJECTIVES FOR THE EIR AND CB-IR (A)

The detailed theoretical knowledge syllabus is combined with the Learning Objectives (LOs).

The LOs refer to measurable statements of the skills and/or knowledge that a student should be able to demonstrate following a defined element of training. The LOs define the theoretical knowledge that a student should have assimilated on successful completion of an approved theoretical knowledge course and/or prior to undertaking the theoretical knowledge examinations.

The LOs are intended to be used by the training industry when developing Part-FCL theoretical knowledge courses. It should be noted, however, that the LOs do not provide a ready-made ground training syllabus for individual approved training organisations, and should not be seen by organisations as a substitute for thorough course-design.

For the preparation of theoretical knowledge courses for the issue of instrument ratings, the following information should be taken into account:

Subject Air Law
Subject Air Law is primarily based on ICAO documentation but will also refer to the future European operational rules and the requirements dealing with pilot licensing.

National Law should not be taken into account but remains relevant during practical training and operational flying.

Abbreviations used are ICAO abbreviations listed in ICAO Doc 8400, Abbreviations and Codes.

Where an LO refers to a definition e.g. ‘Define the following terms’ or ‘Define and understand’ or ‘Explain the definitions in …’, candidates are also expected to be able to recognise a given definition.

Subject Flight Planning and Flight Monitoring

To fully appreciate and understand the subject Flight Planning and Flight Monitoring, the applicant will benefit from background knowledge in subjects Air Law, Aircraft General Knowledge, Mass & Balance, Performance, Meteorology, Navigation, Operational Procedures and Principles of Flight.

The reference to the relevant requirements of the Regulation on Air Operations is specifically mentioned in the LOs and should be used for reference as required.

The Jeppesen Student Pilots’ Training Route Manual (SPTRM), otherwise known as the Training Route Manual (TRM), contains planning data plus Aerodrome and Approach charts that may be used in theoretical knowledge training courses.
AMC1 MFCL.625(c)  IR — Validity, revalidation and renewal

RENEWAL OF INSTRUMENT RATING: REFRESHER TRAINING

(a) Paragraph (b)(1) of MFCL.740 determines that if the instrument rating has lapsed, the applicant shall go through refresher training at an ATO, to reach the level of proficiency needed to pass the instrument element of the skill test prescribed in Appendix 9 to Part-MFCL. The amount of refresher training needed should be determined on a case-by-case basis by the ATO, taking into account the following factors:

(1) the experience of the applicant. To determine this, the ATO should evaluate the pilot’s log book, and, if necessary, conduct a test in an FSTD.

(2) the amount of time lapsed since the expiry of the validity period of the rating. The amount of training needed to reach the desired level of proficiency should increase with the time lapsed. In some cases, after evaluating the pilot, and when the time lapsed is very limited (less than 3 months), the ATO may even determine that no further refresher training is necessary. The following may be taken as guidance when determining the needs of the applicant:

(i) expiry for a period shorter than 3 months: no supplementary requirements;

(ii) expiry for longer than 3 months but shorter than 1 year: a minimum of one training session;

(iii) expiry for longer than 1 year but shorter than 7 years: a minimum of three training sessions;

(iv) expiry for longer than 7 years: the applicant should undergo the full training course for the issue of the IR.

(b) Once the ATO has determined the needs of the applicant, it should develop an individual training programme, which should be based on the initial training for the issue of instrument ratings and focus on the aspects where the applicant has shown the greatest needs.

(c) After successful completion of the training, the ATO should give a certificate to the applicant, to be submitted to the Authority when applying for the renewal.
CHAPTER H — CLASS AND TYPE RATINGS

GM1 MFCL.700 Circumstances in which class or type ratings are required

LIST OF CLASS OR TYPE RATINGS

The following tables contain lists of aeroplanes or TMG that are included in class ratings.

(a) Class ratings (aeroplane): SP and SEP or MEP aeroplane (land or sea):

<table>
<thead>
<tr>
<th>Manufacturer</th>
<th>Aeroplanes</th>
<th>License Endorsement</th>
</tr>
</thead>
<tbody>
<tr>
<td>All manufacturers</td>
<td>SEP (land)</td>

</tr>
</thead>
<tbody>
<tr>
<td>All manufacturers</td>
<td>All TMGs having an integrally mounted, non-retractable engine and a non-retractable propeller</td>
<td>TMG</td>
</tr>
</tbody>
</table>

(c) Additional class and type rating lists and endorsement lists are published by the Agency.
(d) Whenever (D) is indicated in one of the lists mentioned in paragraphs (a) to (c), it indicates that differences training in accordance with MFCL.710 is required.

**GM1 MFCL.710 Class and type ratings — variants**

**Differences and familiarisation training**

(a) Differences training requires the acquisition of additional knowledge and training on an appropriate training device or the aircraft.

(b) Familiarisation training requires the acquisition of additional knowledge.
AMC2 MFCL.720.A (b) (2) (i) Experience requirements and prerequisites for the issue of class or type ratings — aeroplanes

ADDITIONAL THEORETICAL KNOWLEDGE FOR A CLASS OR TYPE RATING FOR HIGH PERFORMANCE SP AEROPLANES

An applicant for an additional class or type rating for a single-pilot aeroplane classified as a high performance aeroplane (HPA), who:

(a) has held a single-pilot HPA class or type rating prior to the application of Commission Regulation (EU) No 245/2014; and

(b) has completed a competency-based modular IR(A) course according to Appendix 6 Aa or EIR course according to MFCL.825; and

(c) does not fulfil the requirements of MFCL.720.A (b)(2)(ii) or (iii); should pass the theoretical knowledge instruction and examination for the VFR and IFR parts of the course required in accordance with MFCL.725

AMC1 MFCL.725 (a) Requirements for the issue of class and type ratings

SYLLABUS OF THEORETICAL KNOWLEDGE FOR CLASS OR TYPE RATINGS

I. SE AND ME AEROPLANES

(a) Detailed listing for aeroplane structure and equipment, normal operation of systems and malfunctions:

(1) dimensions: minimum required runway width for 180 ° turn.

(2) engine including auxiliary power unit:

(i) type of engine or engines;

(ii) in general, function of the following systems or components:

(A) engine;

(B) auxiliary power unit;

(C) oil system;

(D) fuel system;

(E) ignition system;

(F) starting system;

(G) fire warning and extinguishing system;

(H) generators and generator drives;
(I) power indication;

(J) reverse thrust;

(K) water injection.

(iii) on piston or turbine-propeller engines additionally:

(A) propeller system;

(B) feathering system.

(iv) engine controls (including starter), engine instruments and indications in the cockpit, their function, interrelation and interpretation;

(v) engine operation, including APU, during engine start, start and engine malfunctions, procedures for normal operation in the correct sequence.

(3) fuel system:

(i) location of the fuel tanks, fuel pumps, fuel lines to the engines, tank capacities, valves and measuring;

(ii) location of the following systems:

(A) filtering;

(B) heating;

(C) fueling and defueling;

(D) dumping;

(E) venting.

(iii) in the cockpit:

(A) the monitors and indicators of the fuel system;

(B) quantity and flow indication, interpretation.

(iv) procedures:

(A) fuel procedures distribution into the various tanks;

(B) fuel supply, temperature control and fuel dumping.

(4) pressurisation and air conditioning:

(i) components of the system and protection devices;
DEPARTMENT OF CIVIL AVIATION
MFCL ACCEPTABLE MEANS OF COMPLIANCE AND GUIDANCE
MATERIAL

(ii) cockpit monitors and indicators;

(iii) interpretation about the operational condition;

(iv) normal operation of the system during start, cruise, approach and landing, air conditioning airflow and temperature control.

(5) ice and rain protection, windshield wipers and rain repellent:

(i) ice protected components of the aeroplane including engines, heat sources, controls and indications;

(ii) operation of the anti-icing or de-icing system during take-off, climb, cruise and descent, conditions requiring the use of the protection systems;

(iii) controls and indications of the windshield wipers and rain repellent systems operation.

(6) hydraulic system:

(i) components of the hydraulic system(s), quantities and system pressure, hydraulically actuated components associated to the respective hydraulic system;

(ii) controls, monitors and indicators in the cockpit, function and interrelation and interpretation of indications.

(7) landing gear:

(i) main components of the:

(A) main landing gear;

(B) nose gear;

(C) gear steering;

(D) wheel brake system, including anti-skid.

(ii) gear retraction and extension (including changes in trim and drag caused by gear operation);

(iii) required tyre pressure, or location of the relevant placard;

(iv) controls and indicators including warning indicators in the cockpit in relation to the retraction or extension condition of the landing gear and brakes;

(v) components of the emergency extension system.

(8) flight controls and high lift devices:
(i)  (A) aileron system;
     (B) elevator system;
     (C) rudder system;
     (D) trim system;
     (E) spoiler system;
     (F) lift devices;
     (G) stall warning system;
     (H) take-off configuration warning system.

(ii) flight control system from the cockpit controls to the flight control or surfaces;

(iii) controls, monitors and indicators including warning indicators of the systems mentioned under (8) (i), interrelation and dependencies

(9) electrical power supply:
     (i) number, power, voltage, frequency and location of the main power system (AC or DC), auxiliary power system location and external power system;
     (ii) location of the controls, monitors and indicators in the cockpit;
     (iii) flight instruments, communication and navigation systems, main and back-up power sources;
     (iv) location of vital circuit breakers;
     (v) generator operation and monitoring procedures of the electrical power supply.

(10) flight instruments, communication, radar and navigation equipment, autoflight and flight data recorders:
     (i) visible antennae;
     (ii) controls and instruments of the following equipment in the cockpit during normal operation:
        (A) flight instruments;
        (B) flight management systems;
(C) radar equipment, including radio altimeter;

(D) communication and navigation systems;

(E) autopilot;

(F) flight data recorder, cockpit voice recorder and data-link communication recording function;

(G) TAWS;

(H) collision avoidance system;

(I) warning systems.

(11) cockpit, cabin and cargo compartment:

(i) operation of the exterior, cockpit, cabin and cargo compartment lighting and the emergency lighting;

(ii) operation of the cabin and cargo doors, stairs, windows and emergency exits;

(iii) main components of the oxygen system and their location, oxygen masks and operation of the oxygen systems for the crew and passengers, required amount of oxygen by means of a table or diagram.

(12) Emergency equipment operation and correct application of the following emergency equipment in the aeroplane:

(i) portable fire extinguisher;

(ii) first-aid kits;

(iii) portable oxygen equipment;

(iv) emergency ropes;

(v) life-jacket;

(vi) life rafts;

(vii) emergency transmitters;

(viii) crash axes;

(ix) megaphones;
(x) emergency signals.

(13) pneumatic system:
(i) components of the pneumatic system, pressure source and actuated components;
(ii) controls, monitors and indicators in the cockpit and function of the system;
(iii) vacuum system.

(b) Limitations:
(1) general limitations:
(i) certification of the aeroplane, category of operation, noise certification and maximum and minimum performance data for all flight profiles, conditions and aircraft systems:
(A) maximum tail and crosswind-components at take-off and landing;
(B) maximum speeds for flap extension \( v_{fo} \);
(C) at various flap settings \( v_{fe} \);
(D) for landing gear operation \( v_{lo}, M_{lo} \);
(E) for extended landing gear \( v_{le}, M_{le} \);
(F) for maximum rudder deflection \( v_{a}, M_{a} \);
(G) for tyres;
(H) one propeller feathered.
(ii) (A) minimum control speed air \( v_{mca} \);
(B) minimum control speed ground \( v_{mcg} \);
(C) stall speed under various conditions \( v_{so}, v_{s1} \);
(D) maximum speed \( v_{ne}, M_{ne} \);
(E) maximum speed for normal operation \( v_{mo}, M_{mo} \);
(F) altitude and temperature limitations;
(G) stick shaker activation.
(iii) (A) maximum airport pressure altitude, runway slope;
(B) maximum taxi mass;
(C) maximum take-off mass;
(D) maximum lift off mass;
(E) maximum landing mass;
(F) zero fuel mass;
(G) maximum dumping speed $v_{dco}$, $M_{dco}$, $v_{dce}$, $M_{dce}$;
(H) maximum load factor during operation;
(I) certificated range of centre of gravity.

(2) engine limitations:

(i) operating data of the engines:

(A) time limits and maximum temperatures;
(B) minimum RPMs and temperatures;
(C) torque;
(D) maximum power for take-off and go-around on pressure altitude or flight altitude and temperature;
(E) piston engines: certified range of mixture;
(F) minimum and maximum oil temperature and pressure;
(G) maximum starter time and required cooling;
(H) time between two start attempts for engines and auxiliary power unit;
(I) for propeller: maximum RPM of propeller triggering of automatic feathering device.

(ii) certified oil grades.

(3) systems limitations:

(i) operating data of the following systems:

(A) pressurisation, air conditioning maximum pressures;
(B) electrical power supply, maximum load of main power system (AC or DC);
DEPARTMENT OF CIVIL AVIATION
MFCL ACCEPTABLE MEANS OF COMPLIANCE AND GUIDANCE MATERIAL

(C) maximum time of power supply by battery in case of emergency;

(D) mach trim system and yaw damper speed limits;

(E) autopilot limitations of various modes;

(F) ice protection;

(G) speed and temperature limits of window heat;

(H) temperature limits of engine and wing anti-ice.

(ii) fuel system: certified fuel specifications, minimum and maximum pressures and temperature of the fuel.

(4) minimum equipment list.

(c) Performance, flight planning and monitoring:

(1) performance calculation about speeds, gradients, masses in all conditions for take-off, en-route, approach and landing according to the documentation available (for example for take-off v1, vmbe, vr, vlof, v2, take-off distance, maximum take-off mass and the required stop distance) on the following factors:

(i) accelerate or stop distance;

(ii) take-off run and distance available (TORA, TODA);

(iii) ground temperature, pressure altitude, slope, wind;

(iv) maximum load and maximum mass (for example ZFM);

(v) minimum climb gradient after engine failure;

(vi) influence of snow, slush, moisture and standing water on the runway;

(vii) possible single or dual engine failure during cruise flight;

(viii) use of anti-icing systems;

(ix) failure of water injection system or antiskid system;

(x) speeds at reduced thrust, v1, v1red, vmbe, vmu, vr, vlof, v2;

(xi) safe approach speed vref, on vmca and turbulent conditions;

(xii) effects of excessive approach speed and abnormal glideslope on the landing distance;
(xiii) minimum climb gradient during approach and landing;

(xiv) limiting values for a go-around with minimum fuel;

(xv) maximum allowable landing mass and the landing distance for the destination and alternate aerodrome on the following factors:

(A) available landing distance;

(B) ground temperature, pressure altitude, runway slope and wind;

(C) fuel consumption to destination or alternate aerodrome;

(D) influence of moisture on the runway, snow, slush and standing water;

(E) failure of the water injection system or the anti-skid system;

(F) influence of thrust reverser and spoilers.

(2) flight planning for normal and abnormal conditions:

(i) optimum or maximum flight level;

(ii) minimum required flight altitude;

(iii) drift down procedure after an engine failure during cruise flight;

(iv) power setting of the engines during climb, cruise and holding under various circumstances, as well as the most economic cruising flight level;

(v) calculation of a short range or long range flight plan;

(vi) optimum and maximum flight level and power setting of the engines after engine failure.

(3) flight monitoring.

(d) Load and balance and servicing:

(1) load and balance:

(i) load and trim sheet on the maximum masses for take-off and landing;

(ii) centre of gravity limits;

(iii) influence of fuel consumption on the centre of gravity;
(iv) lashing points, load clamping, maximum ground load.

(2) servicing on ground, servicing connections for:

   (i) fuel;
   (ii) oil;
   (iii) water;
   (iv) hydraulic;
   (v) oxygen;
   (vi) nitrogen;
   (vii) conditioned air;
   (viii) electric power;
   (ix) start air;
   (x) toilet and safety regulations.

(e) Emergency procedures:

   (1) recognition of the situation as well as immediate memory actions in correct sequence and for those conditions recognised as emergencies by the manufacturer and Authority for certification:

      (i) engine failure during take-off before and after \( v_1 \), as well as in-flight;
      (ii) malfunctions of the propeller system;
      (iii) engine overheat, engine fire on ground and in-flight;
      (iv) wheel well fire;
      (v) electrical smoke or fire;
      (vi) rapid decompression and emergency descent;
      (vii) air-conditioning overheat, anti-ice system overheat;
      (viii) fuel pump failure;
      (ix) fuel freezing overheat;
      (x) electric power failure;
(xi) equipment cooling failure;

(xii) flight instrument failure;

(xiii) partial or total hydraulic failure;

(xiv) failures at the lift devices and flight controls including boosters;

(xv) cargo compartment smoke or fire.

(2) actions according to the approved abnormal and emergency checklist:

(i) engine restart in-flight;

(ii) landing gear emergency extension;

(iii) application of the emergency brake system;

(iv) emergency extension of lift devices;

(v) fuel dumping;

(vi) emergency descent.

(f) Special requirements for extension of a type rating for instrument approaches down to decision heights of less than 200 ft. (60 m):

(1) airborne and ground equipment:

(i) technical requirements;

(ii) operational requirements;

(iii) operational reliability;

(iv) fail operational;

(v) fail passive;

(vi) equipment reliability;

(vii) operating procedures;

(viii) preparatory measures;

(ix) operational downgrading;

(x) communications.

(2) procedures and limitations:
(i) operational procedures;

(ii) crew coordination.

(g) Special requirements for ‘glass cockpit’ aeroplanes with EFIS Additional learning objectives:

(1) general rules of aeroplanes computer hardware and software design;

(2) logic of all crew information and alerting systems and their limitations;

(3) interaction of the different aeroplane computer systems, their limitations, the possibilities of computer fault recognition and the actions to be performed on computer failures;

(4) normal procedures including all crew coordination duties;

(5) aeroplane operation with different computer degradations (basic flying).

(h) Flight management systems.

II. SE AND ME HELICOPTERS

(a) Detailed listing for helicopters structure, transmissions, rotors and equipment, normal and abnormal operation of systems:

(1) dimensions.

(2) engine including aux. power unit, rotor and transmissions; if an initial type rating for a turbine engine helicopter is applied for, the applicant should have received turbine engine instruction:

(i) type of engine or engines;

(ii) in general, the function of the following systems or components:

(A) engine;

(B) auxiliary power unit;

(C) oil system;

(D) fuel system;

(E) ignition system;

(F) starting system;

(G) fire warning and extinguishing system;

(H) generators and generator drive;

(I) power indication;
(J) water or methanol injection.

(iii) engine controls (including starter), engine instruments and indications in the cockpit, their function and interrelation and interpretation;

(iv) engine operation, including APU, during engine start and engine malfunctions, procedures for normal operation in the correct sequence;

(v) transmission system:
   (A) lubrication;
   (B) generators and generator drives;
   (C) freewheeling units;
   (D) hydraulic drives;
   (E) indication and warning systems.

(vi) type of rotor systems: indication and warning systems.

(3) fuel system:
   (i) location of the fuel tanks, fuel pumps, fuel lines to the engines tank capacities, valves and measuring;
   (ii) the following systems:
      (A) filtering;
      (B) fueling and defueling heatings;
      (C) dumping;
      (D) transferring;
      (E) venting.
   (iii) in the cockpit: the monitors and indicators of the fuel system, quantity and flow indication, interpretation;
   (iv) fuel procedures distribution into the various tanks fuel supply and fuel dumping.

(4) air conditioning:
   (i) components of the system and protection devices;
(ii) cockpit monitors and indicators;

Note: interpretation about the operational condition: normal operation of the system during start, cruise approach and landing, air conditioning airflow and temperature control.

(5) ice and rain protection, windshield wipers and rain repellent:

(i) ice protected components of the helicopter, including engines and rotor systems, heat sources, controls and indications;

(ii) operation of the anti-icing or de-icing system during take-off, climb, cruise and descent, conditions requiring the use of the protection systems;

(iii) controls and indications of the windshield wipers and rain repellent system operation.

(6) hydraulic system:

(i) components of the hydraulic system(s), quantities and system pressure, hydraulically actuated components associated to the respective hydraulic system;

(ii) controls, monitors and indicators in the cockpit, function and interrelation and interpretation of indications.

(7) landing gear, skids fixed and floats:

(i) main components of the:

(A) main landing gear;

(B) nose gear;

(C) tail gear;

(D) gear steering;

(E) wheel brake system.

(ii) gear retraction and extension;

(iii) required tyre pressure, or location of the relevant placard;

(iv) controls and indicators including warning indicators in the cockpit in relation to the retraction or extension condition of the landing gear;

(v) components of the emergency extension system.

(8) flight controls, stab- and autopilot systems: controls, monitors and
indicators including warning indicators of the systems, interrelation and
dependencies.

(9) electrical power supply:

(i) number, power, voltage, frequency and if applicable phase and
location of the main power system (AC or DC) auxiliary power
system location and external power system;

(ii) location of the controls, monitors and indicators in the cockpit;

(iii) main and back-up power sources flight instruments,
communication and navigation systems, main and back-up power
sources;

(iv) location of vital circuit breakers;

(v) generator operation and monitoring procedures of the electrical
power supply.

(10) flight instruments, communication, radar and navigation equipment,
autoflight and flight data recorders:

(i) antennas;

(ii) controls and instruments of the following equipment in the
cockpit:

(A) flight instruments (for example air speed indicator, pitot
static system, compass system, flight director);

(B) flight management systems;

(C) radar equipment (for example weather radar, transponder);

(D) communication and navigation system (for example HF,
VHF, ADF, VOR/DME, ILS, marker beacon) and area
navigation systems;

(E) stabilisation and autopilot system;

(F) flight data recorder cockpit voice recorder, data-link
communication recording function and radio altimeter;

(G) collision avoidance system;

(H) TAWS;

(I) HUMS.

(11) cockpit, cabin and cargo compartment:

(i) operation of the exterior, cockpit, cabin and cargo compartment
lighting and the emergency lighting;

(ii) operation of the cabin doors and emergency exits.

(12) emergency equipment:

(i) operation and correct application of the following mobile emergency equipment in the helicopter:

(A) portable fire extinguisher;

(B) first-aid kits;

(C) portable oxygen equipment;

(D) emergency ropes;

(E) life-jacket;

(F) life rafts;

(G) emergency transmitters;

(H) crash axes;

(I) megaphones;

(J) emergency signals;

(K) torches.

(ii) Operation and correct application of the fixed emergency equipment in the helicopter: emergency floats.

(b) Limitations:

(1) general limitations, according to the helicopter flight manual

(2) minimum equipment list.

(c) Performance, flight planning and monitoring:

(1) performance calculation about speeds, gradients, masses conditions for take-off, en-route, approach and landing, in all

(i) take-off:

(A) hover performance in and out of ground effect;

(B) all approved profiles, cat A and B;

(C) HV diagram;
(D) take-off and rejected take-off distance;
(E) take-off decision point (TDP) or (DPATO);
(F) calculation of first and second segment distances;
(G) climb performance.

(ii) en-route:
(A) air speed indicator correction;
(B) service ceiling;
(C) optimum or economic cruising altitude;
(D) max endurance;
(E) max range;
(F) cruise climb performance.

(iii) landing:
(A) hovering in and out of ground effect;
(B) landing distance;
(C) landing decision point (LDP) or (DPBL).

(iv) knowledge or calculation of: $v_{lo}$, $v_{le}$, $v_{mo}$, $v_x$, $v_y$, $v_{toss}$, $v_{ne}$, $V_{max \ range}$, $v_{mini}$.

(2) flight planning for normal and abnormal conditions:

(i) optimum or maximum flight level;
(ii) minimum required flight altitude;
(iii) drift down procedure after an engine failure during cruise flight;
(iv) power setting of the engines during climb, cruise and holding under various circumstances as well as at the most economic cruising flight level;
(v) optimum and maximum flight level and power setting after an engine failure.

(3) effect of optional equipment on performance.
(d) Load, balance and servicing:

(1) load and balance:

   (i) load and trim sheet on the maximum masses for take-off and landing;

   (ii) centre of gravity limits;

   (iii) influence of the fuel consumption on the centre of gravity;

   (iv) lashing points, load clamping, max ground load.

(2) servicing on the ground, servicing connections for:

   (i) fuel;

   (ii) oil, etc.;

   (iii) and safety regulations for servicing.

(e) Emergency procedures.

(f) Special requirements for extension of a type rating for instrument approaches down to a decision height of less than 200 ft. (60 m):

(1) airborne and ground equipment:

   (i) technical requirements;

   (ii) operational requirements;

   (iii) operational reliability;

   (iv) fail operational;

   (v) fail passive;

   (vi) equipment reliability;

   (vii) operating procedures;

   (viii) preparatory measures;

   (ix) operational downgrading;

   (x) communication.

(2) procedures and limitations:

   (i) operational procedures;
(ii) crew co-ordination.

(g) Special requirements for helicopters with EFIS.

(h) Optional equipment.

III. AIRSHIPS

(a) Detailed listing for airship structure and equipment, normal operation of systems and malfunctions:

(1) dimensions;

(2) structure and envelope:

   (i) internal structure;

   (ii) envelope;

   (iii) pressure system;

   (iv) gondola;

   (v) empennage.

(3) flight controls;

(4) systems:

   (i) hydraulic;

   (ii) pneumatic.

(5) landing gear;

(6) fuel system;

(7) fire warning and extinguishing system;

(8) emergency equipment;

(9) electrical systems;

(10) avionics, radio navigation and communication equipment;

(11) instrumentation;

(12) engines and propellers;

(13) heating, ventilation and air-condition;

(14) operational procedures during start, cruise, approach and landing:
(i) normal operations;

(ii) abnormal operations.

(b) Limitations:

(1) general limitations:

   (i) certification of the airship, category of operation, noise certification and maximum and minimum performance data for all flight profiles, conditions and aircraft systems;

   (ii) speeds;

   (iii) altitudes.

(2) engine limitations;

(3) systems limitations;

(4) minimum equipment list.

(c) Performance and flight planning:

   (1) performance calculation;

   (2) flight planning.

(d) Load and balance and servicing:

   (1) load and balance;

   (2) servicing.

(e) Emergency procedures:

   (1) recognition of emergency situations;

   (2) actions according to the approved abnormal and emergency checklist.
AMC2 MFCL.725 (a) Requirements for the issue of class and type ratings

TRAINING COURSE

FLIGHT INSTRUCTION FOR TYPE RATINGS: HELICOPTERS

(a) The amount of flight instruction depends on:

(i) complexity of the helicopter type, handling characteristics, level of technology;

(ii) category of helicopter (SEP or SE turbine helicopter, ME turbine and MP helicopter);

(iii) previous experience of the applicant;

(iv) the availability of FSTDs.

(b) FSTDs

The level of qualification and the complexity of the type will determine the amount of practical training that may be accomplished in FSTDs, including completion of the skill test. Before undertaking the skill test, a student should demonstrate competency in the skill test items during the practical training.

(c) Initial issue

The flight instruction (excluding skill test) should comprise:

<table>
<thead>
<tr>
<th>Helicopter types</th>
<th>In helicopter</th>
<th>In helicopter and FSTD associated training Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>SEP (H)</td>
<td>5 hrs</td>
<td>Using FFS C/D: At least 2 hrs helicopter and at least 6 hrs total Using FTD 2/3: At least 4 hrs helicopter and at least 6 hrs.</td>
</tr>
<tr>
<td>SET(H) under 3175 kg MTOM</td>
<td>5 hrs</td>
<td>Using FFS C/D: At least 2 hrs. helicopter and at least 6 hrs. total Using FTD 2/3: At least 4 hrs.</td>
</tr>
<tr>
<td>SET(H) at or over 3175 kg MTOM</td>
<td>8 hrs.</td>
<td>Using FFS C/D: At least 2 hrs. helicopter and at least 10 hrs. total Using FTD 2/3: At least 4 hrs. helicopter and at least 10 hrs.</td>
</tr>
<tr>
<td>SPH MET (H) CS and FAR 27 and 29</td>
<td>8 hrs.</td>
<td>Using FFS C/D: At least 2 hrs. helicopter and at least 10 hrs. total Using FTD 2/3: At least 4 hrs. helicopter and at least 10 hrs. total</td>
</tr>
<tr>
<td>MPH</td>
<td>10 hrs.</td>
<td>Using FFS C/D: At least 2 hrs. helicopter, and at least 12 hrs. total Using FTD 2/3: At least 4 hrs.</td>
</tr>
</tbody>
</table>

(d) Additional types

The flight instruction (excluding skill test) should comprise:
### Helicopter types

<table>
<thead>
<tr>
<th>Helicopter types</th>
<th>In helicopter</th>

<td>Using FFS C/D: At least 1 hr. helicopter and at least 3 hrs. total</td>
</tr>
</tbody>
</table>

(e) Holders of an IR(H) wishing to extend the IR(H) to further types should have additionally 2 hours flight training on type by sole reference to instruments according to IFR which may be conducted in an FFS C/D or FTD 2/3. Holders of an SE IR (H) wishing to extend the IR privileges to an ME IR (H) for the first time should complete at least 5 hours training.
AMC1 MFCL.740 (b) (1) Validity and renewal of class and type ratings

RENEWAL OF CLASS AND TYPE RATINGS: REFRESHER TRAINING

(a) Paragraph (b) (1) of MFCL.740 determines that if a class or type rating has lapsed, the applicant shall take refresher training at an ATO. The objective of the training is to reach the level of proficiency necessary to safely operate the relevant type or class of aircraft. The amount of refresher training needed should be determined on a case-by-case basis by the ATO, taking into account the following factors:

1. the experience of the applicant. To determine this, the ATO should evaluate the pilot’s log book, and, if necessary, conduct a test in an FSTD;

2. the complexity of the aircraft;

3. the amount of time lapsed since the expiry of the validity period of the rating. The amount of training needed to reach the desired level of proficiency should increase with the time lapsed. In some cases, after evaluating the pilot, and when the time lapsed is very limited (less than 3 months), the ATO may even determine that no further refresher training is necessary. When determining the needs of the pilot, the following items can be taken into consideration:

   (i) expiry shorter than 3 months: no supplementary requirements;

   (ii) expiry longer than 3 months but shorter than 1 year: a minimum of two training sessions;

   (iii) expiry longer than 1 year but shorter than 3 years: a minimum of three training sessions in which the most important malfunctions in the available systems are covered;

   (iv) expiry longer than 3 years: the applicant should again undergo the training required for the initial issue of the rating or, in case of helicopter, the training required for the 'additional type issue', according to other valid ratings held.

(b) Once the ATO has determined the needs of the applicant, it should develop an individual training programme that should be based on the initial training for the issue of the rating and focus on the aspects where the applicant has shown the greatest needs.

(c) After successful completion of the training, the ATO should give a certificate, or other documental evidence that the training has been successfully achieved to the applicant, to be submitted to the Authority when applying for the renewal. The certificate or documental evidence needs to contain a description of the training programme.
AMC1 MFCL.720.A (b) (2) (i) Experience requirements and prerequisites for the issue of class or type ratings — aeroplanes

ADDITIONAL THEORETICAL KNOWLEDGE FOR A CLASS OR TYPE RATING FOR HIGH PERFORMANCE SP AEROPLANES

(a) A number of aeroplanes certificated for SP operation have similar performances, systems and navigation capabilities to those more usually associated with MP types of aeroplanes, and regularly operate within the same airspace. The level of knowledge required to operate safely in this environment is not part of, or not included to the necessary depth of knowledge in the training syllabi for the PPL, CPL or IR (A) but these license holders may fly as PIC of such aeroplanes. The additional theoretical knowledge required to operate such aeroplanes safely is obtained by completion of a course at an ATO.

(b) The aim of the theoretical knowledge course is to provide the applicant with sufficient knowledge of those aspects of the operation of aeroplanes capable of operating at high speeds and altitudes, and the aircraft systems necessary for such operation.

(c) The course will be divided in a VFR and an IFR part and should cover at least the following items of the aeroplane syllabus to the ATPL(A) level:

FOR VFR OPERATION

(d) Demonstration of acquisition of this knowledge is undertaken by passing an examination set by an ATO. A successful pass of this examination results in the issue of a certificate indicating that the course and examination have been completed.

(e) The certificate represents a ‘once only’ qualification and satisfies the requirement for the addition of all future high performance aeroplanes to the holder’s license. The certificate is valid indefinitely and is to be submitted with the application for the first HPA type or class rating.

(f) A pass in any theoretical knowledge subjects as part of the HPA course will not be credited against meeting future theoretical examination requirements for issue of a CPL (A), IR (A) or ATPL (A).

(g) The applicant who has completed a competency-based modular IR(A) course according to Appendix 6 Aa or EIR course according to FCL.825 needs to complete both VFR and IFR parts of this course

(h) The applicant who has completed a modular IR (A) course according to Appendix 6 A only needs to complete the VFR part of this course.

AMC2 MFCL.720.A (b) (2) (i) Experience requirements and prerequisites for the issue of class or type ratings — aeroplanes

ADDITIONAL THEORETICAL KNOWLEDGE FOR A CLASS OR TYPE RATING FOR HIGH PERFORMANCE SP AEROPLANES

An applicant for an additional class or type rating for a single-pilot aeroplane classified as a high performance aeroplane (HPA), who:

(a) has held a single-pilot HPA class or type rating prior to the application of Commission Regulation (EU) No 245/2014; and

(b) has completed a competency-based modular IR(A) course according to Appendix
6 Aa or EIR course according to MFCL.825; and

(c) does not fulfill the requirements of MFCL.720.A (b)(2)(ii) or (iii);

should pass the theoretical knowledge instruction and examination for the VFR and IFR parts of the course required in accordance with MFCL.720.A. (b)(2)(i).’
**AMC1 MFCL.725.A (b) Theoretical knowledge and flight instruction for the issue of class and type ratings — aeroplanes**

**CLASS RATING SEA**

(a) The theoretical knowledge instruction should be conducted by an instructor having appropriate experience of class rating sea.

(b) Depending on the equipment and systems installed, the instruction should include, but not be limited to, the following content:

(1) theoretical knowledge:

   (i) the aim of the training is to teach:

   (A) the importance of preparation for flight and the safe planning taking into consideration all the factors for manoeuvring the aircraft on the wind, tidal currents, high and low water times and water movements at sea, river estuaries and lakes. In addition, icing conditions, ice covered water and broken ice flows;

   (B) the techniques about the most critical moments at take-off, landing, taxiing and mooring the aircraft;

   (C) the construction methods and characteristics of floats and water rudders and the importance of checking for leaks in the floats;

   (D) the necessary requirements for the compliance of the rules for the avoidance of collisions at sea, in regard to sea charts, buoys and lights and horns.

   (ii) after completing the training, the student should be able to:

   (A) describe the factors that have significance for planning and decision about initiation of seaplane flying and alternative measures for completion of flight;

   (B) describe how the water level is affected by air pressure, wind, tide, regularisations and the flight safety depending on changes in the water level;

   (C) describe the origin of different ice conditions in water areas;

   (D) interpret nautical charts and maps about depths and shoals and risk for water currents, shifts of the wind, turbulence;

   (E) decide what required equipment to bring during seaplane flying according to the operational requirements;

   (F) describe the origin and extension of water waves, swells and water currents and their effect on the aeroplane;
(G) describe how water and air forces effect the aeroplane on water;

(H) describe the effect of water resistance on the aeroplanes' performance on glassy water and during different wave conditions;

(I) describe the consequences of taxiing with too high engine RPM;

(J) describe the effect of pressure and temperature on performance at take-off and climb from lakes located at higher altitude;

(K) describe the effect of wind, turbulence, and other meteorological conditions of special importance for flight over lakes, islands in mountain areas and other broken ground;

(L) describe the function of the water rudder and its handling, including the effect of lowered water rudder at take-off and landing;

(M) describe the parts of the float installation and their function;

(N) describe the effect of the floats on the aeroplanes’ aerodynamics and performance in water and in air;

(O) describe the consequences of water in the floats and fouling of float bottoms;

(P) describe aviation requirements that apply specifically for the conduct of aircraft activity on water;

(Q) describe requirements about animal, nature and environment protection of significance for flight by seaplane, including flight in national parks;

(R) describe the meaning of navigation buoys;

(S) describe the organisation and working methods of the Sea Rescue Service;

(T) describe the requirements in ICAO Annex 2 as set out in paragraph 3.2.6 ‘Water operation’, including relevant parts of the Convention on the International Regulations for Preventing Collisions at Sea.

(2) practical training:
(i) the aim of the practical training is to learn:

(A) the skills in manoeuvring aeroplanes on water and in mooring the aeroplane;

(B) the skills required for the reconnaissance of landing and mooring areas from the air, including the take-off area;

(C) the skills for assessing the effects of different water depths, shoals, wind, height of waves and swell;

(D) the skills for flying with floats about their effect on performance and flight characteristics;

(E) the skills for flying in broken ground during different wind and turbulence conditions;

(F) the skills for take-off and landing on glassy water, different ° of swell and water current conditions.

(ii) after the training, the student should be able to:

(A) handle the equipment that shall be brought during seaplane flying;

(B) perform pre-flight daily inspection on aeroplane, float installation and special seaplane equipment, including emptying of floats;

(C) sail taxi and turn the aeroplane at swell with correct handling of the water rudder;

(D) taxi on the step and perform turns;

(E) establish the wind direction with the aeroplane;

(F) take necessary actions if loss of steering ability and person falling overboard;

(G) make land and moor aeroplane at bridge, buoy and beach with the use of appropriate knots to secure the aircraft;

(H) maintain given rate of descent by means of variometer only;

(I) perform take-off and landing on glassy water with and without outer references;

(J) perform take-off and landing under swell;

(K) perform power-off landing;
(L) from the air, reconnaissance of landing, mooring and take-off areas, observing;

(M) wind direction and strength during landing and take-off;

(N) surrounding terrain;

(O) overhead wires and other obstacles above and under water;

(P) congested areas;

(Q) determine wind direction and assess wind strength from water level and when airborne;

(R) state, for the aeroplane type in question;

(a) maximum wave height allowed;

(b) maximum number of ERPM allowed during taxi;

(S) describe how flying with floats affects the performance and flight characteristics of the aeroplane;

(T) take corrective action at critical moments due to wind shear and turbulence;

(U) navigate on the water with reference to buoys markers, obstacles and other traffic on the water.

(c) For the initial issue of class rating sea for SP, SE and ME aeroplanes, the number of multi-choice questions in the written or computer-based examination should at least comprise thirty questions, and may be conducted by the training organisation. The pass mark should be 75 %. 
MULTI-CREW COOPERATION COURSE

(a) Competency is a combination of knowledge, skills and attitudes required to perform a task to the prescribed standard.

(b) The objectives of MCC training are to develop the technical and non-technical components of the knowledge, skills and attitudes required to operate a multi-crew aircraft.

(c) Training should comprise both theoretical and practical elements and be designed to achieve the following competencies:
<table>
<thead>
<tr>
<th>Competency</th>
<th>Performance indicators</th>
<th>Knowledge</th>
<th>Practical exercises</th>
</tr>
</thead>
<tbody>
<tr>
<td>Communication</td>
<td>(a) Know what, how much and who to communicate to; (b) Ensure the recipient is ready and able to receive the information; (c) Pass messages and information clearly, accurately, timely and adequately; (d) Check if the other person has the correct understanding when passing important information; (e) Listen actively, patiently and demonstrate understanding when receiving information; (f) Ask relevant and effective questions, and offer suggestions; (g) Use appropriate body language, eye contact and tone; (h) Open and receptive to other people’s view.</td>
<td>(a) Human Factors, TEM and CRM; (b) Application of TEM and CRM principles to training.</td>
<td>In a commercial air transport environment, apply multi-crew procedures, including principles of TEM and CRM to the following: (a) re-flight preparation: (1) FMS initialisation; (2) radio and navigation equipment preparation; (3) flight documentation; (4) Computation of take-off performance data. (b) Take-off and climb: (1) before take-off checks; (2) normal take-offs; (3) rejected take-offs; (4) take-offs with abnormal and</td>

GM1 MFCL.720.PL Experience requirements and prerequisites for the issue of type ratings — powered-lift aircraft

The endorsement of a powered-lift type rating to an aeroplane or helicopter license does not confer upon its holder the privileges to fly helicopters or aeroplanes, respectively.
CHAPTER I — ADDITIONAL RATINGS

AMC1 MFCL.800 Aerobatic rating

THEORETICAL KNOWLEDGE AND FLYING TRAINING

(a) The aim of the aerobatic training is to qualify license holders to perform aerobatic manoeuvres.

(b) The ATO should issue a certificate of satisfactory completion of the instruction to license endorsement.

(c) Theoretical knowledge

The theoretical knowledge syllabus should cover the revision or explanation of:

(1) human factors and body limitation:

   (i) spatial disorientation;

   (ii) airsickness;

   (iii) body stress and G-forces, positive and negative;

   (iv) effects of grey- and blackouts.

(2) technical subjects:

   (i) legislation affecting aerobatic flying to include environmental and noise subjects;

   (ii) principles of aerodynamics to include slow flight, stalls and spins, flat and inverted;

   (iii) general airframe and engine limitations (if applicable).

(3) limitations applicable to the specific aircraft category (and type):

   (i) air speed limitations (aeroplane, helicopter, TMG and sailplane, as applicable);

   (ii) symmetric load factors (type-related, as applicable);

   (iii) rolling Gs (type-related, as applicable).

(4) aerobatic manoeuvres and recovery:

   (i) entry parameters;

   (ii) planning systems and sequencing of manoeuvres;

   (iii) rolling manoeuvres;

   (iv) looping manoeuvres;
(v) combination manoeuvres;
(vi) entry and recovery from developed spins, flat, accelerated and inverted.

(5) emergency procedures:
(i) recovery from unusual attitudes;
(ii) drills to include the use of parachutes (if worn) and aircraft abandonment.

(d) Flying training

The exercises of the aerobatic flying training syllabus should be repeated as necessary until the applicant achieves a safe and competent standard. Having completed the flight training, the student pilot should be able to perform a solo flight containing a sequence of aerobatic manoeuvres. The dual training and the supervised solo training flights should be tailored to the category of aircraft and limited to the permitted manoeuvres of that type of aircraft. The exercises should comprise at least the following practical training items:

(1) confidence manoeuvres and recoveries:
(i) slow flights and stalls;
(ii) steep turns;
(iii) side slips;
(iv) engine restart in-flight (if applicable);
(v) spins and recovery;
(vi) recovery from spiral dives;
(vii) recovery from unusual attitudes.

(2) aerobatic manoeuvres:
(i) Chandelle;
(ii) Lazy Eight;
(iii) rolls;
(iv) loops;
(v) inverted flight;
(vi) Hammerhead turn;
(vii) Immelmann.
AMC1 MFCL.805  Sailplane towing and banner towing rating

THEORETICAL KNOWLEDGE AND FLYING TRAINING

(a) The aim of the towing instruction is to qualify license holders to tow banners or sailplanes.

(b) The ATO should issue a certificate of satisfactory completion of the instruction that can be used for license endorsement.

(c) Theoretical knowledge: towing of sailplanes

The theoretical knowledge syllabus for towing of sailplanes should cover the revision or explanation of:

(1) regulations about towing flights;

(2) equipment for the towing activity;

(3) sailplane towing techniques, including:
   
   (i) signals and communication procedures;
   
   (ii) take-off (normal and crosswind);
   
   (iii) in-flight launch procedures;
   
   (iv) descending on tow;
   
   (v) sailplane release procedure;
   
   (vi) tow rope release procedure;
   
   (vii) landing with tow rope connected (if applicable);
   
   (viii) emergency procedure during tow, including equipment malfunctions;
   
   (ix) safety procedures;
   
   (x) flight performance of the applicable aircraft type when towing sailplanes;
   
   (xi) look-out and collision avoidance;
   
   (xii) performance data sailplanes, including:
       
       (A) suitable speeds;
       
       (B) stall characteristics in turns.

(d) Theoretical knowledge: banner towing
The theoretical knowledge syllabus for banner towing should cover the revision or explanation of:

1. regulations about banner towing;
2. equipment for the banner towing activity;
3. ground crew coordination;
4. pre-flight procedures;
5. banner towing techniques, including:
   i. take-off launch;
   ii. banner pickup manoeuvres;
   iii. flying with a banner in tow;
   iv. release procedure;
   v. landing with a banner in tow (if applicable);
   vi. emergency procedures during tow, including equipment malfunctions;
   vii. safety procedures;
   viii. flight performance of the applicable aircraft type when towing a heavy or light banner;
   ix. prevention of stall during towing operations.

(e) Flying training: towing of sailplanes

The exercises of the towing training syllabus for towing sailplanes should be repeated as necessary until the student achieves a safe and competent standard and should comprise at least the following practical training items:

1. take-off procedures (normal and crosswind take-offs);
2. 360° circles on tow with a bank of 30° and more;
3. descending on tow;
4. release procedure of the sailplane;
5. landing with the tow rope connected (if applicable);
6. tow rope release procedure in-flight;
7. emergency procedures (simulation);
(8) signals and communication during tow.

(f) Flying training: banner towing
The exercises of the towing training syllabus for banner towing should be repeated as necessary until the student achieves a safe and competent standard and should comprise at least the following practical training items:

(1) pickup manoeuvres;
(2) towing in-flight techniques;
(3) release procedures;
(4) flight at critically low air speeds;
(5) maximum performance manoeuvres;
(6) Emergency manoeuvres to include simulated); equipment malfunctions
(7) specific banner towing safety procedures;
(8) go-around with the banner connected;
(9) loss of engine power with the banner attached (simulated).

**AMC1 MFCL.810 (b) Night rating**

**PPL (H) NIGHT RATING COURSE**

(a) The aim of the course is to qualify PPL (H) holders to exercise the privileges of the license at night.

(b) The ATO should issue a certificate of satisfactory completion of the instruction that can be used for license endorsement.

(c) Theoretical knowledge

The theoretical knowledge syllabus should cover the revision or explanation of:

(1) night VMC minima;
(2) rules about airspace control at night and facilities available;
(3) rules about aerodrome ground, runway, landing site and obstruction lighting;
(4) aircraft navigation lights and collision avoidance rules;
(5) physiological aspects of night vision and orientation;
(6) dangers of disorientation at night;
(7) dangers of weather deterioration at night;
(8) instrument systems or functions and errors;
(9) instrument lighting and emergency cockpit lighting systems;
(10) map marking for use under cockpit lighting;
(11) practical navigation principles;
(12) radio navigation principles;
(13) planning and use of safety altitude;
(14) danger from icing conditions, avoidance and escape manoeuvres.

(d) Flying training

The exercises of the night rating flight syllabus should be repeated as necessary until the student achieves a safe and competent standard:

(1) In all cases, exercises 4 to 6 of the night rating flight syllabus should be completed.

(2) For exercises 1 to 3, up to 50% of the required flight training may be completed in an FSTD (H). However, all items within each exercise should be conducted in a helicopter in-flight.

(3) Items marked (*) should be completed in simulated IMC and may be completed in daylight.

(4) The flying exercises should comprise:

(i) Exercise 1:

(A) revise basic manoeuvres when flying by sole reference to instruments*;

(B) explain and demonstrate transition to instrument flight from visual flight*;

(C) explain and revise recovery from unusual attitudes by sole reference to instruments*.

(ii) Exercise 2:

Explain and demonstrate the use of radio navigation aids when flying by sole reference to instruments, to include position finding and tracking*.

(iii) Exercise 3:

Explain and demonstrate the use of radar assistance*.

(iv) Exercise 4:
(A) explain and demonstrate the use and adjustment of landing light;

(B) explain and demonstrate night hovering:
   (a) higher and slower than by day;
   (b) avoidance of unintended sideways or backwards movements.

(C) explain and demonstrate night take-off techniques;

(D) explain and demonstrate night circuit technique;

(E) explain and demonstrate night approaches (constant angle) with or without visual approach aids to:
   (a) heliports;
   (b) illuminated touchdown areas.

(F) practise take-off's, circuits and approaches;

(G) explain and demonstrate night emergency procedures to include:
   (a) simulated engine failure (to be terminated with power recovery at a safe altitude);
   (b) simulated engine failure, including SE approach and landing (ME only);
   (c) simulated inadvertent entry to IMC (not on base leg or final);
   (d) simulated hydraulic control failure (to include landing);
   (e) internal and external lighting failure;
   (f) other malfunctions and emergency procedures as required by the aircraft flight manual.

(v) Exercise 5:

Solo night circuits.

(vi) Exercise 6:

(A) explain and demonstrate night cross-country techniques;

(B) practice night cross-country dual and as SPIC to a satisfactory standard.

| Use of the markings | Use of the markings |
AMC2 MFCL.815 Mountain rating

SKILL TEST AND PROFICIENCY CHECK

The skill test for the issue or the proficiency check for the revalidation or renewal of a mountain rating should contain the following elements:

(a) oral examination

This part should be done before the flight and should cover all the relevant parts of the theoretical knowledge. At least one question for each of the following sections should be asked:

(1) specific equipment for a mountain flight (personal and aircraft);
(2) rules of the mountain flight.

If the oral examination reveals a lack in theoretical knowledge, the flight test should not be done and the skill test is failed.

(b) practical skill test

During the flight test, two sites different from the departure airport should be used for recognition, approach, landing and take-off. For the mountain rating ski or the extension from wheel to ski, one of the two different sites should be a glacier.

AMC1 MFCL.820 Flight test rating

TRAINING COURSE GENERAL

(a) Competency-based training:

(1) Training courses for the flight test rating should be competency-based. The training programme should follow as much as possible the syllabus outlined below, but may be adapted taking into account the previous experience, skill and theoretical knowledge level of the applicants.

(2) It should also be recognised that the syllabi below assume that suitable flight test experience will be gained subsequent to attendance at the course. Should the applicant be significantly experienced already, then consideration should be made of that experience and it is possible that course content might be reduced in areas where that experience has been obtained.

(3) Furthermore, it should be noted that flight test ratings are specific to both a certain category of aircraft (aeroplanes or helicopters) and to a certain category of flight test (category 1 or 2). Therefore, holders of a flight test rating wishing to extend their privileges to further categories of aircraft or to further categories of flight test (this is only relevant for holders of a category 2 flight test rating since the category one flight test rating includes the privileges for category 2 test flights) should not be requested to undertake the same course as an ‘ab-initio’ applicant. In these cases, the ATO should develop specific ‘bridge courses’ taking into account the same principles mentioned above.

(4) To allow proper consideration of the applicant’s previous experience, a
pre-entry assessment of the applicant’s skills should be undertaken by the applicant, on the basis of which the ATO may evaluate the level of the applicant to better tailor the course. Thus, the syllabi listed below should be regarded as a list of individual demonstrable competencies and qualifications rather than a list of mandatory training objectives.

(b) Continuous evaluation
Training courses for the flight test rating should be built on a continuous evaluation model to guarantee that successful completion of the course ensures that the applicant has reached the level of competence (both theoretical and practical) to be issued a flight test rating.

CONTENT OF THE COURSE

(c) In addition, the content of the course should vary taking into account whether the applicant seeks privileges for a category 1 or 2 flight test rating, as well as the relevant category of aircraft, and their level of complexity. To better take these factors into account, training courses for the flight test rating have been divided into two conditions:

(1) condition 1 courses apply to category 1 flight test ratings on:
   (i) helicopters certificated in accordance with the standards of CS-27 or CS-29 or equivalent airworthiness codes;
   (ii) aeroplanes certificated in accordance with:
         (A) the standards of CS-25 or equivalent airworthiness codes; or
         (B) the standards of CS-23 or equivalent airworthiness codes, within the commuter category or having an MD above 0.6 or a maximum ceiling above 25 000 ft.

(2) condition 2 training courses apply to:
   (i) category 2 flight test ratings for:
       (A) helicopters certificated in accordance with the standards of CS-27 or CS-29 or equivalent airworthiness codes;
       (B) aeroplanes certificated in accordance with:
           (a) the standards of CS-25 or equivalent airworthiness codes; or
           (b) the standards of CS-23 or equivalent airworthiness codes (included those mentioned in (c) (1) (ii) (B)), except for aeroplanes with a maximum take-off mass of less than 2 000 kg.
   (ii) category 1 flight tests for aeroplanes certificated in accordance with the standards of CS-23, with a maximum take-off mass of more than 2 000kg, with the exclusion of those mentioned in (c)(1)(ii)(B) (which are subject to condition 1 courses).
AEROPLANES

(d) Condition 1 courses for aeroplanes

(1) These courses should include approximately:

(i) 350 hours of ground training;

(ii) 100 hours of flight test training, during which at least 15 flights should be made without an instructor on board;

(iii) principles of test management and risk and safety managements should be integrated throughout the course. In addition, principles and methods applicable to the certification activity, as well as safety assessments should be taught.

(2) These courses should include instruction on at least 10 different aeroplane types, of which at least one should be certificated in accordance with CS-25 standards or equivalent airworthiness codes.

(3) During the course the student should be required to develop at least five substantial flight test reports.

(4) The student should be evaluated through examinations on all of the theoretical knowledge subjects, and undertake a final in-flight test upon completion of the syllabus.

(5) Syllabus. The following subjects should be covered in the course:

<table>
<thead>

(e) high speed certification test

(f) final evaluation exercise (a flight test report should be developed)

(e) Condition 2 courses for aeroplanes

(1) These courses should include approximately:

(i) 150 hours of ground training;

(ii) 50 hours of flight test training, during which at least eight flights should be made without an instructor on board.

Principles of test management and risk and safety managements should be integrated throughout the course. In addition, principles and methods applicable to the certification activity, as well as safety assessments should be taught.

(2) These courses should include instruction on at least seven different aeroplane types, of which at least one should be certificated in accordance with CS-25 standards or equivalent airworthiness codes.
(3) During the course the student should be required to develop at least three substantial flight test reports.

(4) The student should be evaluated through examinations on all of the theoretical knowledge subjects, and undertake a final in-flight test upon completion of the syllabus.

(5) Syllabus. The following subjects should be covered in the course:

|                          | (f) final evaluation exercise (a flight test report should be developed) |

**AMC1 MFCL.825 (a) En Route instrument rating (EIR)**
GENERAL

Since the privileges of the EIR are only to be exercised in the en route phase of flight, holders of an EIR should:

(a) at no time accept an IFR clearance to fly a departure, arrival or approach procedure;

(b) notify the ATS if unable to complete a flight within the limitations of their rating.

CONDITIONS FOR THE EXERCISE OF THE PRIVILEGES OF AN EN ROUTE INSTRUMENT RATING (EIR)

(c) To comply with FCL.825 (a) (2), the holder of an EIR should not commence or continue a flight during which it is intended to exercise the privileges of the rating unless the appropriate weather reports or forecasts for the destination and alternate aerodrome for the period from one hour before until one hour after the planned time of arrival indicates VMC. The flight may be planned only to aerodromes for which such meteorological information is available. When filing a flight plan, the holder of an EIR should include suitable VFR to IFR and IFR to VFR transitions. In any case, the pilot needs to apply the relevant operational rules, which ever are more limiting.

(d) A suitable VFR to IFR transition is any navigational fix

1. to which the flight can be safely conducted under VFR; and

2. which is acceptable to ATS if available.

(f) A suitable IFR to VFR transition is any navigational fix

1. to which the flight can be safely conducted under IFR;

2. at which VMC conditions exist; and

1. from where the flight can be safely continued under VFR without having to follow instrument arrival or approach

AMC1 MFCL.825(c) En route instrument rating (EIR)

FLYING TRAINING

The flight instruction for the EIR should comprise the following flying exercises:

(a) pre-flight procedures for IFR flights, including the use of the flight manual, meteorological information, appropriate air traffic service documents, filing of an IFR flight plan, including VFR/IFR transitions and diversions

(b) use of appropriate IFR and VFR charts;

(c) basic instrument flight by sole reference to instruments:

— horizontal flight,
— climbing,
— descending,
— turns in level flight, climbing, descending;

(d) steep turns and recovery from unusual attitudes on full and limited panel;

(e) normal flight on limited panel;

(f) instrument pattern;

(g) procedures and manoeuvres for IFR operation under normal, abnormal and emergency conditions covering at least:

— transition from visual to instrument flight after departure
— en-route IFR procedures,
— en-route holding procedures,
— transition from instrument flight en route to visual before reaching the Minimum Sector Altitude (MSA);

(h) radio navigation (GPS/VOR);

(i) use of advanced equipment such as autopilot, flight director, stormscope, de-icing equipment, EFIS or radar, as available;

(j) emergency procedures covering the deterioration of meteorological conditions;

(k) at least two IFR approaches in the context of an emergency situation;

(l) use of RT techniques in order to gain a competence to a high standard;

(m) if required, operation of a multi-engine aeroplane during the above range of exercises to include engine failures and cruise flight with one engine simulated inoperative;

(n) the flight instruction should also include at least two flights in controlled airspace under IFR with a high density of traffic and VFR arrivals and departures from aerodromes with a mixture

**AMC1 MFCL.825 (d) En route instrument rating (EIR)**

**SYLLABUS OF THEORETICAL KNOWLEDGE FOR THE EIR**

For the theoretical knowledge syllabus for the EIR, refer to AMC1 MFCL.615 (b)

**AMC2 MFCL.825 (d) En route instrument rating (EIR)**

**THEORETICAL KNOWLEDGE INSTRUCTION AND EXAMINATION**

(a) **GENERAL**
The theoretical knowledge instruction and examination is the same as for the instrument rating following the competency-based modular course according to Appendix 6 Aa.

(b) THEORETICAL KNOWLEDGE

The applicant should complete an approved competency-based IR (A) or EIR theoretical knowledge (TK) course. The approved CB-IR (A) or EIR TK course may contain computer-based training, e-learning elements, interactive video, slide/tape presentation, learning carrels and other media as approved by the authority, in suitable proportions. Approved distance learning (correspondence) courses may also be offered as part of the course. The minimum amount of classroom teaching, as required by ORA.ATO.305, has to be provided.

(c) THEORETICAL KNOWLEDGE EXAMINATION

The number of questions per subject, the distribution of questions and the time allocated to each subject is detailed in AMC2 ARA.MFCL.300 (b).

AMC3 MFCL.825 (d) En route instrument rating (EIR)

DETAILED THEORETICAL KNOWLEDGE SYLLABUS AND LEARNING OBJECTIVES FOR EIR

For the detailed theoretical knowledge syllabus and learning objectives, refer to AMC2 FCL.615 (b) through to AMC8 MFCL.615 (b).

GM1 MFCL.825 (d) En route instrument rating (EIR)

DETAILED THEORETICAL KNOWLEDGE SYLLABUS AND LEARNING OBJECTIVES FOR EIR

For the detailed theoretical knowledge syllabus and learning objectives, refer to GM1 MFCL.615 (b).

AMC1 MFCL.825 (e); (g) En route instrument rating (EIR)

SKILL TEST/PROFICIENCY CHECK FOR THE ISSUE, REVALIDATION, OR RENEWAL OF AN EN ROUTE INSTRUMENT RATING (EIR)

(a) An applicant for an EIR should have received instrument flight instruction on the same type or class of aeroplane to be used in the test/check.

(b) An applicant should pass all the relevant sections of the skill test/proficiency check. If any item in a section is failed, that section is failed. Failure in more than one section will require the applicant to take the entire test/check again. An applicant failing only one section should only repeat the failed section. Failure in any section of the retest/recheck, including those sections that have been passed on a previous attempt, requires the applicant to take the entire test/check again. All sections of the skill test/proficiency check should be completed within six months. Failure to achieve a pass in all sections of the test/check in two attempts requires further training.

(c) Further training may be required following a failed skill test/proficiency
check. There is no limit to the number of skill tests/proficiency checks that may be attempted.

CONDUCT OF THE TEST/CHECK

(d) The test/check is intended to simulate a practical flight. The route to be flown shall be chosen by the examiner. An essential element is the ability of the applicant to plan and conduct the flight from routine briefing material. The applicant should undertake the flight planning and should ensure that all equipment and documentation for the execution of the flight are on board. The duration of the flight should be at least 60 minutes.

(e) Should the applicant choose to terminate a skill test/proficiency check for reasons considered inadequate by the flight examiner, the applicant should retake the entire skill test/proficiency check. If the test/check is terminated for reasons considered adequate by the examiner, only those sections not completed should be tested in a further flight.

(f) At the discretion of the examiner any manoeuvre or procedure of the test/check may be repeated once by the applicant. The examiner may stop the test/check at any stage if it is considered that the applicant’s demonstration of flying skill requires a complete retest/recheck.

(g) An applicant should fly the aeroplane from a position where the pilot-in-command functions can be performed and to carry out the test/check as if there is no other crew member. Responsibility for the flight should be allocated in accordance with national regulations.

(h) Minimum descent heights/altitudes and the transition points should be determined by the applicant and agreed by the examiner.

(i) An applicant for an EIR should indicate to the examiner the checks and duties carried out, including the identification of radio facilities. The checks should be completed in accordance with the authorised checklist for the aeroplane on which the test/check is being taken. During pre-flight preparation for the test/check the applicant should determine power settings and speeds. Performance data for take-off, approach and landing should be calculated by the applicant in compliance with the operations manual or flight manual for the aeroplane used.

FLIGHT TEST TOLERANCES

(j) The applicant should demonstrate the ability to:
   - operate the aeroplane within its limitations;
   - complete all manoeuvres with smoothness and accuracy;
   - exercise good judgment and airmanship;
   - apply aeronautical knowledge; and
   - maintain control of the aeroplane at all times in such a manner that the successful outcome of a procedure or manoeuvre is never seriously in doubt.

(k) The following limits should apply corrected to make allowance for turbulent conditions and the handling qualities and performance of the aeroplane

Height
DEPARTMENT OF CIVIL AVIATION
MFCL ACCEPTABLE MEANS OF COMPLIANCE AND GUIDANCE MATERIAL

Generally ±100 feet
Tracking
  on radio aids ±10°
Heading
  all engines operating ±10°
  with simulated engine failure ±15°
Speed
  all engines operating +10 knots/~5 knots
  with simulated engine failure +15 knots/~5 knots

CONTENT OF THE SKILL TEST/PROFICIENCY CHECK

| SECTION 1  |
|-----------------|-----------------|
| **PRE-FLIGHT OPERATIONS AND DEPARTURE** |
| Use of checklist, airmanship, anti/de-icing procedures, etc., apply in all sections. |
| a | Use of flight manual (or equivalent) especially a/c performance calculation, mass and balance |
| b | Use of ATC document, weather document |
| c | Preparation of ATC flight plan, IFR flight plan/log |
| d | Pre-flight inspection |
| e | Weather Minima |
| f | Taxiing |
| g | Pre-take-off briefing. Take-off |
| h | ATC liaison: compliance, R/T procedures |

| SECTION 2  |
|-----------------|-----------------|
| **GENERAL HANDLING** |
| a | Control of the aeroplane by reference solely to instruments, including: level flight at various speeds, trim |
| b | Climbing and descending turns with sustained Rate 1 turn |
| c | Recoveries from unusual attitudes, including sustained 45° bank turns and steep descending turns |
| d | Recovery from approach to stall in level flight, climbing/descending turns and in landing configuration |
| e | Limited panel, stabilised climb or descent at Rate 1 turn onto given headings, recovery from unusual attitudes |

AMC1 MFCL.825 (g) (2)) En route instrument rating (EIR)

TRAINING FLIGHT FOR REVALIDATION

(a) The training flight for the revalidation of an EIR should be based on the exercise items of the EIR proficiency check as deemed relevant by the instructor and should depend on the experience of the candidate. The training flight should include a briefing including a discussion on threat and error management with a special emphasis on decision making when encountering adverse meteorological conditions, unintentional Instrument Meteorological Conditions (IMC) and navigation flight capabilities.
(b) In any case, a simulated diversion and instrument approach to an alternate aerodrome in the context of an emergency situation during the en route phase in IFR should be demonstrated by the instructor.

**AMC1 MFCL.825 (h) En route instrument rating (EIR)**

**PRE-ENTRY ASSESSMENT AND TRAINING RECORD**

(a) **PRE-ENTRY ASSESSMENT**

The assessment to establish the amount of training to be credited and to identify the training needs should be based on the EIR training syllabus established in AMC1 MFCL.825(c).

(b) **TRAINING RECORD**

(1) Before initiating the assessment, the applicant should provide the ATO with a training record containing the details of the previous flight training provided by the IRI (A) or the FI (A). This training record should at least specify the aircraft type and registration used for the training, the number of flights and the total amount of instrument flight time under instruction. It should also specify all the exercises completed during the training by using the syllabus contained in AMC1 MFCL.825(c).

(2) The instructor(s) having provided the training should keep the training records containing all the details of the flight training given for a period of at least 5 years after the completion of the training.

**AMC2 MFCL.825 (h) En route instrument rating (EIR)**

**TRAINING AIRCRAFT**

The aeroplane used for the instrument flight time under instruction provided outside an ATO by an IRI (A) or FI (A) should be:

(a) Fitted with primary flight controls that are instantly accessible by both the student and the instructor (for example dual flight controls or a centre control stick) Swing-over flight controls should not be used and

(b) Suitably equipped to simulate instrument meteorological conditions (IMC) and from the instrument flight training required.

**AMC2 MFCL.825 (h) En route instrument rating (EIR)**

**TRAINING AIRCRAFT**

The aeroplane used for the instrument flight time under instruction provided outside an ATO by an IRI (A) or FI (A) should be

(a) hold a multi-engine IR(A), issued in accordance with the requirements of Annex 1 to the Chicago Convention by a third country;

(b) have the minimum experience required in MFCL.825 paragraph (i) (3), of which at least 4 hours should be completed in a multi-engine aeroplane.

**AMC1 MFCL.830 Sailplane Cloud Flying Rating**

**THEORETICAL KNOWLEDGE INSTRUCTION AND FLIGHT INSTRUCTION**
1. **THEORETICAL KNOWLEDGE INSTRUCTION**

The theoretical knowledge syllabus should cover the revision and/or explanation of:

1.1. **Human Factors and Body Limitations**
   - basic aviation physiology in regards cloud flying aspects
   - basic aviation psychology
   - spatial disorientation

1.2. **Principles of Flight**
   - stability
   - control
   - limitations (load factor and manoeuvres)

1.3. **Aircraft Instrumentation**
   - sensors and instruments
   - measurement of air data parameters
   - gyroscopic instruments

1.4. **Navigation**
   - use of GPS
   - use of charts
   - dead reckoning navigation (DR)
   - air traffic regulations — airspace structure
   - aeronautical information service
   - Member State regulations regarding cloud flying

1.5. **Communications**
   - VHF communications
   - relevant weather information terms

1.6. **Hazards and Emergency Procedures**
   - icing
   - cloud escape procedures
   - anti-collision instruments/avionics
2. **FLYING TRAINING**

2.1. The exercises of the sailplane cloud flight instruction syllabus should be repeated as necessary until the student achieves a safe and competent standard and should comprise at least the following practical training items, flown solely by reference to instruments:

- straight flight
- turning
- achieving and maintaining heading
- return to straight flight from steeper angle of bank
- position fixing using GPS and aeronautical charts
- position estimating using DR
- basic cloud escape manoeuvre/unusual attitude
- advanced cloud escape manoeuvre on nominated heading

2.2. Only exercises under simulated IMC should be conducted in a TMG. However, at least one hour cloud flying training must be flown in a sailplane or powered sailplane (excluding TMG).

**AMC2 MFCL.830  Sailplane Cloud Flying Rating**

**SKILL TEST AND PROFICIENCY CHECK**

The skill test for the issue of the cloud flying rating or the proficiency check for fulfilling the requirements in MFCL.830(b)(3) and in MFCL.830(e)(1) should be conducted in either a sailplane or a powered sailplane (including TMG if the test or check will be flown under simulated IMC only) and should contain the following elements:

(a) **ORAL EXAMINATION**

This part should be completed before the flight and should cover all the relevant parts of the theoretical knowledge syllabus. At least one question for each of the following sections should be asked:

- Human performance and body limitations;
- Principles of flight;
- Aircraft instrumentation for cloud flying;
- Navigation;
- Communications;
- Hazards and emergency procedures.
If the oral examination reveals a lack in theoretical knowledge, the flight test should not be done and the skill test/proficiency check is failed.

(b) PRACTICAL SKILL TEST/PROFICIENCY CHECK

During the practical test/check, the following limits should apply with appropriate allowance for turbulent conditions and the handling qualities and performance of the sailplane used. Artificial horizon or turn and slip instruments should be used as appropriate:

<table>
<thead>
<tr>
<th></th>
<th>Artificial Horizon</th>
<th>Turn &amp; Slip</th>
</tr>
</thead>
<tbody>
<tr>
<td>Straight flight</td>
<td>Heading $\pm 10^\circ$</td>
<td>Heading $\pm 20^\circ$</td>
</tr>
<tr>
<td></td>
<td>IAS $\pm$ 10kts</td>
<td>IAS $\pm$ 15kts</td>
</tr>
<tr>
<td>Turning</td>
<td>Angle of bank $\pm 15^\circ$</td>
<td>Small deviations in rate of turn with a maximum</td>
</tr>
<tr>
<td></td>
<td>IAS $\pm$ 10kts</td>
<td>deviation between $\frac{1}{2}$ &amp; full scale IAS $\pm$ 15kts</td>
</tr>
<tr>
<td>Position fixing given: GPS displaying range and bearing to a point</td>
<td>$\pm$ 2NM</td>
<td>$\pm$ 3NM</td>
</tr>
</tbody>
</table>

During the practical test/check, the following exercises should be successfully completed by the applicant, flown solely by reference to instruments and taking into account the limits above

— straight flight;
— turning;
— achieving and maintaining heading;
— return to straight flight from steeper angle of bank;
— position fixing using GPS and aeronautical charts;
— position estimating using DR;
— basic cloud escape manoeuvre/unusual attitude;
— advanced cloud escape manoeuvre on nominated heading.
CHAPTER J — INSTRUCTORS

GM1 MFCL.900 Instructor certificates

GENERAL

(a) Nine instructor categories are recognised:

(1) FI certificate: aeroplane (FI(A)), helicopter (FI(H)), airship (FI(As)), sailplane (FI(S)) and balloon (FI(B));

(2) TRI certificate: aeroplane (TRI(A)), helicopter (TRI(H)), powered-lift aircraft (TRI(PL));

(3) CRI certificate: aeroplane (CRI(A));

(4) IRI certificate: aeroplane (IRI(A)), helicopter (IRI(H)) and airship (IRI(As));

(5) SFI certificate: aeroplane (SFI(A)), helicopter (SFI(H)) and powered-lift aircraft (SFI(PL));

(6) MCCI certificate: aeroplanes (MCCI(A)), helicopters (MCCI(H)), powered-lift aircraft (MCCI(PL)) and airships (MCCI(As));

(7) STI certificate: aeroplane (STI(A)) and helicopter (STI(H));

(8) MI certificate: (MI);

(9) FTI certificate: (FTI).

(b) For categories (1) to (4) and for (8) and (9) the applicant needs to hold a pilot licence. For categories (5) to (7) no licence is needed, only an instructor certificate.

(c) A person may hold more than one instructor certificate.

SPECIAL CONDITIONS

(a) When new aircraft are introduced, requirements such as to hold a license and rating equivalent to the one for which instruction is being given, or to have adequate flight experience, may not be possible to comply with. In this case, to allow for the first instruction courses to be given to applicants for licenses or ratings for these aircraft, competent authorities need to have the possibility to issue a specific certificate that does not have to comply with the requirements established in this Subpart.

(b) The Authority should only give these certificates to holders of other instruction qualifications. As far as possible, preference should be given to persons with at least 100 hours of experience in similar types or classes of aircraft.

(c) When the new aircraft type introduced in an operator’s fleet already existed in a Member State, the Authority should only give the specific certificate to an
applicant that is qualified as PIC on that aircraft.

(d) The certificate should ideally be limited in validity to the time needed to qualify the first instructors for the new aircraft in accordance with this Subpart, but in any case it should not exceed the 1 year established in the rule.
### AMC1 MFCL.920 Instructor competencies and assessment

(a) Training should be both theoretical and practical. Practical elements should include the development of specific instructor skills, particularly in the area of teaching and assessing threat and error management and CRM.

(b) The training and assessment of instructors should be made against the following performance standards:

<table>
<thead>
<tr>
<th>Competence</th>
<th>Performance</th>
<th>Knowledge</th>
</tr>
</thead>
<tbody>
<tr>
<td>Prepare resources</td>
<td>(a) ensures adequate facilities;</td>
<td>(a) understand objectives;</td>
</tr>

AMC1 MFCL.925 Additional requirements for instructors for the MPL

MPL INSTRUCTOR COURSE

(a) The objectives of the MPL instructors training course are to train applicants to deliver training in accordance with the features of a competency-based approach to training and assessment.

(b) Training should be both theoretical and practical. Practical elements should include the development of specific instructor skills, particularly in the area of teaching and assessing threat and error management and CRM in the multi-crew environment.

(c) The course is intended to adapt instructors to conduct competency-based MPL training. It should cover the items specified below:

THEORETICAL KNOWLEDGE

(d) Integration of operators and organisations providing MPL training:

(1) reasons for development of the MPL;
(2) MPL training course objective;
(3) adoption of harmonised training and procedures;
(4) feedback process.

(e) The philosophy of a competency-based approach to training: principles of competency-based training.

(f) Regulatory framework, instructor qualifications and competencies:

(1) source documentation;
(2) instructor qualifications;
(3) syllabus structure.

(g) Introduction to Instructional systems design methodologies (see ICAO PANS-TRG Doc):

(1) analysis;
(2) design and production;
(3) evaluation and revision.

(h) Introduction to the MPL training scheme:

(1) training phases and content;
(2) training media;
(3) competency units, elements and performance criteria.

(i) Introduction to human performance limitations, including the principles of threat and error management and appropriate countermeasures developed in CRM:

(1) definitions;
(2) appropriate behaviours categories;
(3) assessment system.

(j) Application of the principles of threat and error management and CRM principles to training:

(1) application and practical uses;
(2) assessment methods;
(3) individual corrective actions;
(4) debriefing techniques.

(k) The purpose and conduct of assessments and evaluations:

(1) basis for continuous assessment against a defined competency standard;
(2) individual assessment;
(3) collection and analysis of data;
(4) training system evaluation.

PRACTICAL TRAINING

(l) Practical training may be conducted by interactive group classroom modules, or by the use of training devices. The objective is to enable instructors to:

(1) identify behaviors based on observable actions in the following areas:

   (i) communications;
   (ii) team working;
   (iii) situation awareness;
   (iv) workload management;
   (v) problem solving and decision making.

(2) analyse the root causes of undesirable behaviours;
(3) debrief students using appropriate techniques, in particular:
(i) use of facilitative techniques;

(ii) encouragement of student self-analysis.

(4) agree corrective actions with the students;

(5) determine achievement of the required competency.

**AMC2 MFCL.925 (d) (1) Additional requirements for instructors for the MPL**

**RENEWAL OF PRIVILEGES: REFRESHER TRAINING**

(a) Paragraph (d) of MFCL.925 determines that if the applicant has not complied with the requirements to maintain his/her privileges to conduct competency-based approach training, he or she shall receive refresher training at an ATO to reach the level of competence necessary to pass the assessment of instructor competencies. The amount of refresher training needed should be determined on a case-by-case basis by the ATO, taking into account the following factors:

(1) the experience of the applicant;

(2) the amount of time lapsed since the last time the applicant has conducted training in an MPL course. The amount of training needed to reach the desired level of competence should increase with the time lapsed. In some cases, after evaluating the instructor, and when the time lapsed is very limited, the ATO may even determine that no further refresher training is necessary.

(b) Once the ATO has determined the needs of the applicant, it should develop an individual training programme, which should be based on the MPL instructor course and focus on the aspects where the applicant has shown the greatest needs.
**GM1 MFCL.925 Additional requirements for instructors for the MPL**

**MPL INSTRUCTORS**

The following table summarises the instructor qualifications for each phase of MPL integrated training course:

<table>
<thead>
<tr>
<th>Phase of training</th>
<th>Qualification</th>

<td>(d) FI(A) and TRI(A)</td>
</tr>
<tr>
<td>Phase 1: Core flying skills</td>
<td>FI(A) and 500 hours, including 200 hours of instruction</td>
</tr>
<tr>
<td></td>
<td>Instructor qualifications and privileges should be in accordance with the training items within the phase.</td>
</tr>
<tr>
<td></td>
<td>STI for appropriate exercises conducted in an FNPT or BTD.</td>
</tr>
</tbody>
</table>
AMC1 MFCL.935 Assessment of competence

GENERAL

(a) The format and application form for the assessment of competence are determined by the Authority.

(b) When an aircraft is used for the assessment, it should meet the requirements for training aircraft.

(c) If an aircraft is used for the test or check, the examiner acts as the PIC, except in circumstances agreed upon by the examiner when another instructor is designated as PIC for the flight.

(d) During the skill test the applicant occupies the seat normally occupied by the instructor (instructors seat if in an FSTD, or pilot seat if in an aircraft), except in the case of balloons. The examiner, another instructor or, for MPA in an FFS, a real crew under instruction, functions as the ‘student’. The applicant is required to explain the relevant exercises and to demonstrate their conduct to the ‘student’, where appropriate. Thereafter, the ‘student’ executes the same manoeuvres (if the ‘student’ is the examiner or another instructor, this can include typical mistakes of inexperienced students). The applicant is expected to correct mistakes orally or, if necessary, by intervening physically.

(e) The assessment of competence should also include additional demonstration exercises, as decided by the examiner and agreed upon with the applicant before the assessment. These additional exercises should be related to the training requirements for the applicable instructor certificate.

(f) All relevant exercises should be completed within a period of 6 months. However, all exercises should, where possible, be completed on the same day. In principle, failure in any exercise requires a retest covering all exercises, with the exception of those that may be retaken separately. The examiner may terminate the assessment at any stage if they consider that a retest is required.

AMC2 MFCL.935 Assessment of competence

MCCI, STI AND MI

In the case of the MCCI, STI and MI, the instructor competencies are assessed continuously during the training course.

AMC3 MFCL.935 Assessment of competence

CONTENT OF THE ASSESSMENT FOR THE FI

(a) In the case of the FI, the content of the assessment of competence should be the following:

<table>
<thead>
<tr>
<th>SECTION 1 THEORETICAL KNOWLEDGE ORAL</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.1</td>
</tr>
<tr>
<td>1.2</td>
</tr>
<tr>
<td>1.3</td>
</tr>
<tr>
<td>1.4</td>
</tr>
<tr>
<td>1.5</td>
</tr>
<tr>
<td>1.6</td>
</tr>
<tr>
<td>1.7</td>
</tr>
<tr>
<td>1.8</td>
</tr>
<tr>
<td>1.9</td>
</tr>
</tbody>
</table>

Sections 2 and 3 selected main exercises:

**SECTION 2 PRE-FLIGHT BRIEFING**

| 2.1  | Visual presentation |
| 2.3  | Technical accuracy |
| 2.4  | Clarity of explanation |
| 2.5  | Clarity of speech |
| 2.6  | Instructional technique |
| 2.7  | Use of models and aids |
| 2.8  | Student participation |

**SECTION 3 FLIGHT**

| 3.1  | Arrangement of demo |
| 3.2  | Synchronisation of speech with demo |
| 3.3  | Correction of faults |
| 3.4  | Aircraft handling |
| 3.5  | Instructional technique |
| 3.6  | General airmanship and safety |
| 3.7  | Positioning and use of airspace |
SECTION 4 ME EXERCISES

| 4.1 | Actions following an engine failure shortly after take-off
| 4.2 | SE approach and go-around
| 4.3 | SE approach and landing

These exercises are to be demonstrated at the assessment of competence for FI for ME aircraft.

SECTION 5 POST-FLIGHT DE-BRIEFING

| 5.1 | Visual presentation
| 5.2 | Technical accuracy
| 5.3 | Clarity of explanation
| 5.4 | Clarity of speech
| 5.5 | Instructional technique
| 5.6 | Use of models and aids
| 5.7 | Student participation

(b) Section 1, the oral theoretical knowledge examination part of the assessment of competence, is for all FI and is subdivided into two parts:

(1) The applicant is required to give a lecture under test conditions to other 'student(s)', one of whom will be the examiner. The test lecture is to be selected from items of section 1. The amount of time for preparation of the test lecture is agreed upon beforehand with the examiner. Appropriate literature may be used by the applicant. The test lecture should not exceed 45 minutes;

(2) The applicant is tested orally by an examiner for knowledge of items of section 1 and the 'core instructor competencies: teaching and learning' content given in the instructor courses.

(c) Sections 2, 3 and 5 are for all FIs. These sections comprise exercises to demonstrate the ability to be an FI (for example instructor demonstration exercises) chosen by the examiner from the flight syllabus of the FI training courses. The applicant is required to demonstrate FI abilities, including briefing, flight instruction and de-briefing.

(d) Section 4 comprises additional instructor demonstration exercises for an FI for ME aircraft. This section, if applicable, is done in an ME aircraft, or an FFS or FNPT II simulating an ME aircraft. This section is completed in addition to sections 2, 3 and 5.
AMC4 MFCL.935 Assessment of competence

CONTENT OF THE ASSESSMENT FOR THE SFI

The assessment should consist of at least 3 hours of flight instruction related to the duties of an SFI on the applicable FFS or FTD 2/3.

AMC5 MFCL.935 Assessment of competence

REPORT FORMS FOR THE INSTRUCTOR CERTIFICATES

(a) Assessment of competence form for the FI, IRI and CRI certificates:

AMC1 MFCL.930.FI — Training course

FI (A), FI (H) AND FI (AS) TRAINING COURSE GENERAL

(a) The aim of the FI training course is to train aircraft license holders to the level of competence defined in MFCL.920.

(b) The training course should develop safety awareness throughout by teaching the knowledge, skills and attitudes relevant to the FI task including at least the following:
(1) refresh the technical knowledge of the student instructor;
(2) train the student instructor to teach the ground subjects and air exercises;
(3) ensure that the student instructor’s flying is of a sufficiently high standard;
(4) teach the student instructor the principles of basic instruction and to apply them at the PPL level.

FLIGHT INSTRUCTION

(c) The remaining 5 hours in MFCL.930.FI (b) (3) may be mutual flying (that is, two applicants flying together to practice flight demonstrations).

(d) The skill test is additional to the course training time.

CONTENT

(e) The training course consists of two parts:

(1) Part 1, theoretical knowledge, including the teaching and learning instruction that should comply with AMC1 MFCL.920;

(2) Part 2, flight instruction.

Part 1

TEACHING AND LEARNING

(a) The course should include at least 125 hours of theoretical knowledge instruction, including at least 25 hours teaching and learning instruction.

CONTENT OF THE TEACHING AND LEARNING INSTRUCTIONS (INSTRUCTIONAL TECHNIQUES):

(b) The learning process:

(1) motivation;
(2) perception and understanding;
(3) memory and its application;
(4) habits and transfer;
(5) obstacles to learning;
(6) incentives to learning;
(7) learning methods;
(8) rates of learning.
(c) The teaching process:
   (1) elements of effective teaching;
   (2) planning of instructional activity;
   (3) teaching methods;
   (4) teaching from the ‘known’ to the ‘unknown’;
   (5) use of ‘lesson plans’.

(d) Training philosophies:
   (1) value of a structured (approved) course of training;
   (2) importance of a planned syllabus;
   (3) integration of theoretical knowledge and flight instruction;

(e) Techniques of applied instruction:
   (1) theoretical knowledge: classroom instruction techniques:
      (i) use of training aids;
      (ii) group lectures;
      (iii) individual briefings;
      (iv) student participation or discussion.
   (2) flight: airborne instruction techniques:
      (i) the flight or cockpit environment;
      (ii) techniques of applied instruction;
      (iii) post-flight and in-flight judgement and decision making.

(f) Student evaluation and testing:
   (1) assessment of student performance:
      (i) the function of progress tests;
      (ii) recall of knowledge;
      (iii) translation of knowledge into understanding;
      (iv) development of understanding into actions;
      (v) the need to evaluate rate of progress.
(2) analysis of student errors:

(i) establish the reason for errors;
(ii) tackle major faults first, minor faults second;
(iii) avoidance of over criticism;
(iv) the need for clear concise communication.

(g) Training programme development:

(1) lesson planning;
(2) preparation;
(3) explanation and demonstration;
(4) student participation and practice;
(5) evaluation.

(h) Human performance and limitations relevant to flight instruction:

(1) physiological factors:

(i) psychological factors;
(ii) human information processing;
(iii) behavioural attitudes;
(iv) development of judgement and decision making.

(2) threat and error management.

(i) Specific hazards involved in simulating systems failures and malfunctions in the aircraft during flight:

(i) importance of ‘touch drills’;
(ii) situational awareness;
(iii) adherence to correct procedures.

(j) Training administration:

(1) flight or theoretical knowledge instruction records;
(2) pilot’s personal flying logbook;
(3) the flight or ground curriculum;
(4) study material;
(5) official forms;
(6) flight manual or equivalent document (for example owner’s manual or pilot’s operating handbook);
(7) flight authorisation papers;
(8) aircraft documents;
(9) the private pilot’s license regulations.

A. Aeroplanes

Part 2

AIR EXERCISES

(a) The air exercises are similar to those used for the training of PPL (A) but with additional items designed to cover the needs of an FI.

(b) The numbering of exercises should be used primarily as an exercise reference list and as a broad instructional sequencing guide: therefore the demonstrations and practices need not necessarily be given in the order listed. The actual order and content will depend upon the following interrelated factors:

(1) the applicant’s progress and ability;
(2) the weather conditions affecting the flight;
(3) the flight time available;
(4) instructional technique considerations;
(5) the local operating environment.

(c) It follows that student instructors will eventually be faced with similar interrelated factors. They should be shown and taught how to construct flight lesson plans, taking these factors into account, so as to make the best use of each flight lesson, combining parts of the set exercises as necessary.

GENERAL

(d) The briefing normally includes a statement of the aim and a brief allusion to principles of flight only if relevant. An explanation is to be given of exactly what air exercises are to be taught by the instructor and practised by the student during the flight. It should include information on how the flight will be conducted, who is to fly the aeroplane and what airmanship, weather and flight safety aspects currently apply. The nature of the lesson will govern the order in which the constituent parts are to be taught.

(e) The four basic components of the briefing will be:
(1) the aim;

(2) principles of flight (briefest reference only);

(3) the air exercise(s) (what, and how and by whom);

(4) airmanship (weather, flight safety etc.).

PLANNING OF FLIGHT LESSONS

(f) The preparation of lesson plans is an essential prerequisite of good instruction and the student instructor is to be given supervised practice in the planning and practical application of flight lesson plans.

GENERAL CONSIDERATIONS

(g) The student instructor should complete flight training to practise the principles of basic instruction at the PPL (A) level.

(h) During this training, except when acting as a student pilot for mutual flights, the student instructor occupies the seat normally occupied by the FI (A).

(i) It is to be noted that airmanship and look-out is a vital ingredient of all flight operations. Therefore, in the following air exercises the relevant aspects of airmanship are to be stressed at all times.

(j) If the privileges of the FI (A) certificate are to include instruction for night flying, exercises 19 and 20 of the flight instruction syllabus should be undertaken at night in addition to by day either as part of the course or subsequent to certification issue.

(k) The student instructor should learn how to identify common errors and how to correct them properly, which should be emphasised at all times.

SYLLABUS OF FLIGHT INSTRUCTION CONTENTS

LONG BRIEFINGS AND AIR EXERCISES

Note: though exercise 11b is not required for the PPL (A) course, it is a requirement for the FI course.

EXERCISE 1: FAMILIARISATION WITH THE AEROPLANE

(a) Long briefing objectives:

(1) introduction to the aeroplane;

(2) explanation of the cockpit layout;

(3) aeroplane and engine systems;

(4) checklists, drills and controls;
(5) propeller safety;
   (i) precautions general;
   (ii) precautions before and during hand turning;
   (iii) hand swinging technique for starting (if applicable to type).

(6) differences when occupying the instructor’s seat;

(7) emergency drills:
   (i) action if fire in the air and on the ground: engine, cockpit and electrical fire;
   (ii) system failure as applicable to type;
   (iii) escape drills: location and use of emergency equipment and exits.

(b) Air exercise: all long briefing objectives mentioned above should also be trained on site during the air exercise.

**EXERCISE 2: PREPARATION FOR AND ACTION AFTER FLIGHT**

(a) Long briefing objectives:
   (1) flight authorisation and aeroplane acceptance, including technical log (if applicable) and certificate of maintenance;
   (2) equipment required for flight (maps, etc.);
   (3) external checks;
   (4) internal checks;
   (5) student comfort, harness, seat or rudder pedal adjustment;
   (6) starting and warming up checks;
   (7) power checks;
   (8) running down, system checks and switching off the engine;
   (9) leaving the aeroplane, parking, security and picketing;
   (10) completion of authorisation sheet and aeroplane serviceability documents.

(b) Air exercise: all long briefing objectives mentioned above should also be trained on site during the air exercise.

**EXERCISE 3: AIR EXPERIENCE**
(a) Long briefing objectives:

Note: there is no requirement for a long briefing for this exercise.

(b) Air exercise:

(1) air experience;

(2) cockpit layout, ergonomics and controls;

(3) cockpit procedures: stability and control.

EXERCISE 4: EFFECTS OF CONTROLS

(a) Long briefing objectives:

(1) function of primary flying controls: when laterally level and banked;

(2) further effect of ailerons and rudder;

(3) effect of inertia;

(4) effect of air speed;

(5) effect of slipstream;

(6) effect of power;

(7) effect of trimming controls;

(8) effect of flaps;

(9) operation of mixture control;

(10) operation of carburettor heat control;

(11) operation of cabin heat or ventilation systems;

(b) Air exercise:

(1) primary effects of flying controls: when laterally level and banked;

(2) further effects of ailerons and rudder;

(3) effect of air speed;

(4) effect of slipstream;

(5) effect of power;

(6) effect of trimming controls;

(7) effect of flaps;
(8) operation of mixture control;
(9) operation of carburettor heat control;
(10) operation of cabin heat or ventilation systems;
(11) effect of other controls as applicable.

**EXERCISE 5: TAXIING**

(a) Long briefing objectives:
   (1) pre-taxiing checks;
   (2) starting, control of speed and stopping;
   (3) engine handling;
   (4) control of direction and turning (including manoeuvring in confined spaces);
   (5) parking area procedures and precautions;
   (6) effect of wind and use of flying controls;
   (7) effect of ground surface;
   (8) freedom of Rudder movement;
   (9) marshalling signals;
   (10) instrument checks;
   (11) ATC procedures;
   (12) emergencies: steering failure and brake failure.

(b) Air exercise:
   (1) pre-taxiing checks;
   (2) starting, control of speed and stopping;
   (3) engine handling;
   (4) control of direction and turning;
   (5) turning in confined spaces;
   (6) parking area procedures and precautions;
   (7) effect of wind and use of flying control;
(8) effect of ground surface;
(9) freedom of Rudder movement;
(10) marshalling signals;
(11) instrument checks;
(12) ATC procedures;
(13) emergencies: steering failure and brake failure.

**EXERCISE 6: STRAIGHT AND LEVEL FLIGHT**

(a) Long briefing objectives:

(1) The forces
(2) Longitudinal stability and control in pitch
(3) Relationship of CG to control in pitch
(4) Lateral and directional stability control of balance, lateral level and attitude and balance control;
(5) trimming;
(6) power settings and air speeds;
(7) drag and power curves;
(8) range and endurance.

(b) Air exercise:

(1) at normal cruising power;
(2) attaining and maintaining straight and level flight;
(3) demonstration of inherent stability;
(4) control in pitch, including use of elevator trim control;
(5) lateral level, direction and balance, use of rudder trim controls as applicable at selected air speeds (use of power):

   (i) effect of drag and use of power (two air speeds for one power setting);

   (ii) straight and level in different aeroplane configurations (flaps and landing gear);

   (iii) use of instruments to achieve precision flight.
EXERCISE 7: CLIMBING

(a) Long briefing objectives:

(1) the forces;
(2) relationship between power or air speed and rate of climb (power curves maximum rate of climb \((vy)\));
(3) effect of mass;
(4) effect of flaps;
(5) engine considerations;
(6) effect of density altitude;
(7) the cruise climb;
(8) maximum angle of climb \((v_x)\).

(b) Air exercise:

(1) entry and maintaining the normal maximum rate climb;
(2) levelling off;
(3) levelling off at selected altitudes;
(4) climbing with flaps down;
(5) recovery to normal climb;
(6) en-route climb (cruise climb);
(7) maximum angle of climb;
(8) use of instruments to achieve precision flight.

EXERCISE 8: DESCENDING

(a) Long briefing objectives:

(1) the forces;
(2) glide descent: angle, air speed and rate of descent;
(3) effect of flaps;
(4) effect of wind;
(5) effect of mass;
(6) engine considerations;
(7) power assisted descent: power or air speed and rate of descent;
(8) cruise descent;
(9) sideslip.

(b) Air exercise:
(1) entry and maintaining the glide;
(2) levelling off;
(3) levelling off at selected altitudes;
(4) descending with flaps down;
(5) powered descent: cruise descent (including effect of power and air speed);
(6) side-slipping (on suitable types);
(7) use of instrument to achieve precision flight.

**EXERCISE 9: TURNING**

(a) Long briefing objectives:
(1) the forces;
(2) use of controls;
(3) use of power;
(4) maintenance of attitude and balance;
(5) medium level turns;
(6) climbing and descending turns;
(7) slipping turns;
(8) turning onto selected headings: use of gyro heading indicator and magnetic compass.

(b) Air exercise:
(1) entry and maintaining medium level turns;
(2) resuming straight flight;
(3) faults in the turn (incorrect pitch, bank and balance);
(4) climbing turns;
(5) descending turns;
(6) slipping turns (on suitable types);
(7) turns to selected headings use of gyro heading indicator and magnetic compass
(8) use of instruments to achieve precision flight;

Note: stall or spin awareness and avoidance training consists of exercises 10a, 10b and 11a.

**EXERCISE 10a: SLOW FLIGHT**

(a) Long briefing objectives:

(1) aeroplane handling characteristics during slow flight at:
   (i) $v_{s1}$ & $v_{so} + 10$ knots;
   (ii) $v_{s1}$ & $v_{so} + 5$ knots.

(2) slow flight during instructor induced distractions;

(3) effect of overshooting in configurations where application of engine power causes a strong ‘nose-up’ trim change.

(b) Air exercise:

(1) safety checks;

(2) introduction to slow flight;

(3) controlled slow flight in the clean configuration at:
   (i) $v_{s1} + 10$ knots and with flaps down;
   (ii) $v_{so} + 10$ knots;
   (iii) straight and level flight;
   (iv) level turns;
   (v) climbing and descending;
   (vi) climbing and descending turns.

(4) controlled slow flight in the clean configuration at:
(i) \(v_{s1} + 5 \text{ knots and with flaps down;}\)

(ii) \(v_{so} + 5 \text{ knots;}\)

(iii) straight and level flight;

(iv) level turns;

(v) climbing and descending;

(vi) climbing and descending turns;

(vii) descending ‘unbalanced’ turns at low air speed: the need to maintain balanced flight.

(5) ‘instructor induced distractions’ during flight at low air speed: the need to maintain balanced flight and a safe air speed;

(6) effect of going around in configurations where application of engine power causes a strong ‘nose up’ trim change.

EXERCISE 10b: STALLING

(a) Long briefing objectives:

(1) characteristics of the stall;

(2) angle of attack;

(3) effectiveness of the controls at the stall;

(4) factors affecting the stalling speed:
   (i) effect of flaps, slats and slots;
   (ii) effect of power, mass, CG and load factor.

(5) effects of unbalance at the stall;

(6) symptoms of the stall;

(7) stall recognition and recovery;

(8) stalling and recovery:
   (i) without power;
   (ii) with power on;
   (iii) with flaps down;
   (iv) maximum power climb (straight and turning flight to the point
of stall with uncompensated yaw);

(v) stalling and recovery during manoeuvres involving more than 1 G (accelerated stalls, including secondary stalls and recoveries);

(vi) recovering from incipient stalls in the landing and other configurations and conditions;

(vii) recovering at the incipient stage during change of configuration;

(viii) stalling and recovery at the incipient stage with ‘instructor induced’ distractions.

Note: consideration is to be given to manoeuvre limitations and references to the flight manual or equivalent document (for example owner’s manual or pilot’s operating handbook) in relation to mass and balance limitations. The safety checks should take into account the minimum safe altitude for initiating such exercises in order to ensure an adequate margin of safety for the recovery. If specific procedures for stalling or spinning exercises and for the recovery techniques are provided by the flight manual or equivalent document (for example owner’s manual or pilot’s operating handbook), they have to be taken into consideration. These factors are also covered in the next exercise spinning.

(b) Air exercise:

(1) safety checks;

(2) symptoms of the stall;

(3) stall recognition and recovery:

(i) without power;

(ii) with power on;

(iii) recovery when a wing drops at the stall;

(iv) stalling with power ‘on’ and recovery;

(v) stalling with flap ‘down’ and recovery;

(vi) maximum power climb (straight and turning flight) to the point of stall with uncompensated yaw: effect of unbalance at the stall when climbing power is being used;

(vii) stalling and recovery during manoeuvres involving more than 1 G (accelerated stalls, including secondary stalls and recoveries);

(viii) recoveries from incipient stalls in the landing and other configurations and conditions;
(ix) recoveries at the incipient stage during change of configuration;

(x) instructor induced distractions during stalling.

Note: consideration of manoeuvre limitations and the need to refer to the aeroplane manual and weight (mass) and balance calculations. The safety checks should take into account the minimum safe altitude for initiating such exercises in order to ensure an adequate margin of safety for the recovery. If specific procedures for stalling or spinning exercises and for the recovery techniques are provided by the flight manual or equivalent document (for example owner’s manual or pilot’s operating handbook), they have to be taken into consideration. These factors are to be covered in the next exercise: spinning.

**EXERCISE 11a: SPIN RECOVERY AT THE INCIPIENT STAGE**

(a) Long briefing objectives:

(1) causes, stages, autorotation and characteristics of the spin;

(2) recognition and recovery at the incipient stage: entered from various flight attitudes;

(3) aeroplane limitations.

(b) Air exercise:

(1) aeroplane limitations;

(2) safety checks;

(3) recognition at the incipient stage of a spin;

(4) recoveries from incipient spins entered from various attitudes with the aeroplane in the clean configuration, including instructor induced distractions.

**EXERCISE 11b: SPIN RECOVERY AT THE DEVELOPED STAGE**

(a) Long briefing objectives:

(1) spin entry;

(2) recognition and identification of spin direction;

(3) spin recovery;

(4) use of controls;

(5) effects of power or flaps (flap restriction applicable to type);

(6) effect of the CG upon spinning characteristics;

(7) spinning from various flight attitudes;
(8) aeroplane limitation;
(9) safety checks.

(b) Air exercise:

(1) aeroplane limitations;
(2) safety checks;
(3) spin entry;
(4) recognition and identification of the spin direction;
(5) spin recovery (reference to flight manual);
(6) use of controls;
(7) effects of power or flaps (restrictions applicable to aeroplane type);
(8) spinning and recovery from various flight attitudes.

**EXERCISE 12: TAKE-OFF AND CLIMB TO DOWNWIND POSITION**

(a) Long briefing objectives:

(1) handling factors affecting the length of take-off run and initial climb;
(2) correct lift off speed, use of elevators (safeguarding the nose wheel), rudder and power;
(3) effect of wind (including crosswind component);
(4) effect of flaps (including the decision to use and the amount permitted);
(5) effect of ground surface and gradient upon the take-off run;
(6) effect of mass, altitude and temperature on take-off and climb performance;
(7) pre take-off checks;
(8) ATC procedure before take-off;
(9) drills, during and after take-off;
(10) noise abatement procedures;
(11) tail wheel considerations (as applicable);
(12) short or soft field take-off considerations or procedures;
(13) **emergencies:**

   (i) aborted take-off;

   (ii) engine failure after take-off.

(14) **ATC procedures.**

(b) **Air exercise:**

(1) take-off and climb to downwind position;

(2) pre take-off checks;

(3) into wind take-off;

(4) safeguarding the nose wheel;

(5) crosswind take-off;

(6) drills during and after take-off;

(7) short take-off and soft field procedure or techniques (including performance calculations);

(8) noise abatement procedures.

**EXERCISE 13: CIRCUIT, APPROACH AND LANDING**

(a) **Long briefing objectives:**

(1) downwind leg, base leg and approach: position and drills;

(2) factors affecting the final approach and the landing run;

(3) effect of mass;

(4) effects of altitude and temperature;

(5) effect of wind;

(6) effect of flap;

(7) landing;

(8) effect of ground surface and gradient upon the landing run;

(9) types of approach and landing:

   (i) powered;

   (ii) crosswind;
(iii) flapless (at an appropriate stage of the course);
(iv) glide;
(v) short field;
(vi) soft field.
(10) tail wheel aeroplane considerations (as applicable);
(11) missed approach;
(12) engine handling;
(13) wake turbulence awareness;
(14) windshear awareness;
(15) ATC procedures;
(16) mislanding and go-around;
(17) special emphasis on look-out.

(b) Air exercise:
(1) circuit approach and landing;
(2) circuit procedures: downwind and base leg;
(3) powered approach and landing;
(4) safeguarding the nose wheel;
(5) effect of wind on approach and touchdown speeds and use of flaps;
(6) crosswind approach and landing;
(7) glide approach and landing;
(8) flapless approach and landing (short and soft field);
(9) short field and soft field procedures;
(10) wheel landing (tail wheel aircraft);
(11) missed approach and go-around;
(12) mislanding and go-around;
(13) noise abatement procedures.
EXERCISE 14: FIRST SOLO AND CONSOLIDATION

Note: a summary of points to be covered before sending the student on first solo.

(a) Long briefing objectives:

During the flights immediately following the solo circuit consolidation period the following should be covered:

(1) procedures for leaving and rejoining the circuit;
(2) local area (restrictions, controlled airspace, etc.);
(3) compass turns;
(4) QDM meaning and use.

(b) Air exercise: all long briefing objectives mentioned above should also be trained on site during the air exercise.

EXERCISE 15: ADVANCED TURNING

(a) Long briefing objectives:

(1) the forces;
(2) use of power;
(3) effect of load factor:

(i) structural considerations;
(ii) increased stalling speed.
(4) physiological effects;
(5) rate and radius of turn;
(6) steep, level, descending and climbing turns;
(7) stalling in the turn and how to avoid it;
(8) spinning from the turn: recovery at the incipient stage;
(9) spiral dive;
(10) unusual attitudes and recoveries.

Note: considerations are to be given to manoeuvre limitations and reference to the flight manual or equivalent document (for example owner’s manual or pilot’s operating handbook) in relation to mass and balance, and any other restrictions for practice entries to the spin.

(b) Air exercise:
EXERCISE 16: FORCED LANDING WITHOUT POWER

(a) Long briefing objectives:

(1) selection of forced landing areas;
(2) provision for change of plan;
(3) gliding distance: consideration;
(4) planning the descent;
(5) key positions;
(6) engine failure checks;
(7) use of radio: R/T ‘distress’ procedure;
(8) base leg;
(9) final approach;
(10) go-around;
(11) landing considerations;
(12) actions after landing: aeroplane security;
(13) causes of engine failure.

(b) Air exercise:

(1) forced landing procedures;
(2) selection of landing area:
   (i) provision for change of plan;
   (ii) gliding distance considerations.
(3) planning the descent;
(4) key positions;
(5) engine failure checks;
(6) engine cooling precautions;
(7) use of radio;
(8) base leg;
(9) final approach;
(10) landing;
(11) actions after landing when the exercise is conducted at an aerodrome;
(12) aeroplane security.

**EXERCISE 17: PRECAUTIONARY LANDING**

(a) Long briefing objectives:

(1) occasions when necessary (in-flight conditions);
(2) landing area selection and communication (R/T procedure);
(3) overhead inspection;
(4) simulated approach;
(5) climb away;
(6) landing area selection:
   (i) normal aerodrome;
   (ii) disused aerodrome;
   (iii) ordinary field;
(7) circuit and approach;
(8) actions after landing; aeroplane security.

(b) Air exercise:

(1) occasions when necessary (in-flight conditions):
(2) landing area selection
(3) overhead inspection
(4) simulated approach
(5) climb away

(6) landing area selection:

(i) normal aerodrome;
(ii) disused aerodrome;
(iii) ordinary field;

(7) circuit and approach;

(8) actions after landing; aeroplane security;

**EXERCISE 18a: NAVIGATION**

(a) Long briefing objectives:

(1) flight planning;

(i) weather forecast and actual(s);

(ii) map selection, orientation, preparation and use:

   (A) choice of route;
   (B) regulated or controlled airspace;
   (C) danger, prohibited and restricted areas;
   (D) safety altitude.

(iii) calculations:

   (A) magnetic heading(s) and time(s) en-route;
   (B) fuel consumption;
   (C) mass and balance;
   (D) mass and performance.

(iv) flight information:

   (A) NOTAMs etc.;
   (B) noting of required radio frequencies;
   (C) selection of alternate aerodrome(s).

(v) aeroplane documentation.

(vi) notification of the flight:
(A) pre-flight administration procedures;
(B) flight plan form (where appropriate).

(2) departure;
(i) organisation of cockpit workload;
(ii) departure procedures:
   (A) altimeter settings;
   (B) setting heading procedures;
   (C) noting of ETA(s).
(iii) en-route map reading: identification of ground features;
(iv) maintenance of altitudes and headings;
(v) revisions to ETA and heading, wind effect, drift angle and groundspeed checks;
(vi) log keeping;
(vii) use of radio (including VDF if applicable);
(viii) minimum weather conditions for continuance of flight;
(ix) ‘in-flight’ decisions;
(x) diversion procedures;
(xi) operations in regulated or controlled airspace;
(xii) procedures for entry, transit and departure;
(xiii) navigation at minimum level;
(xiv) uncertainty of position procedure, including R/T procedure;
(xv) lost procedure;
(xvi) use of radio navaids.

(3) arrival procedures and aerodrome circuit joining procedures:
(i) ATC liaison, R/T procedure, etc.;
(ii) altimeter setting,
(iii) entering the traffic pattern (controlled or uncontrolled aerodromes)
(iv) circuit breakers
(v) parking procedures
(vi) security of aircraft
(vii) refueling
(viii) booking in.

(b) Air exercise:

(1) flight planning:

(i) weather forecast and actual(s);
(ii) map selection and preparation:
   (A) choice of route;
   (B) regulated or controlled airspace;
   (C) danger, prohibited and restricted areas;
   (D) safety altitude.

(iii) calculations:
   (A) magnetic heading(s) and time(s) en-route;
   (B) fuel consumption;
   (C) mass and balance;
   (D) mass and performance.

(iv) flight information:
   (A) NOTAMs etc.;
   (B) noting of required radio frequencies;
   (C) selection of alternate aerodromes.

(v) aircraft documentation;

(vi) notification of the flight:
   (A) flight clearance procedures (as applicable);
   (B) flight plans.

(2) aerodrome departure;
(i) organisation of cockpit workload;

(ii) departure procedures:
   (A) altimeter settings;
   (B) en-route:
   (C) noting of ETA(s).

(iii) wind effect, drift angle and ground speed checks;

(iv) maintenance of altitudes and headings;

(v) revisions to ETA and heading;

(vi) log keeping;

(vii) use of radio (including VDF if applicable);

(viii) minimum weather conditions for continuance of flight;

(ix) 'in-flight' decisions;

(x) diversion procedure;

(xi) operations in regulated or controlled airspace;

(xii) procedures for entry, transit and departure;

(xiii) uncertainty of position procedure;

(xiv) lost procedure;

(xv) use of radio nav aids.

(3) arrival procedures and aerodrome joining procedures:

(i) ATC liaison, R/T procedure etc.;

(ii) altimeter setting,

(iii) entering the traffic pattern;

(iv) circuit procedures;

(v) parking procedures

(vi) security of aircraft;

(vii) refueling;
(viii) booking in.

**EXERCISE 18b: NAVIGATION AT LOWER LEVELS AND IN REDUCED VISIBILITY**

(a) Long briefing objectives:

(1) general considerations:

(i) planning requirements before flight in entry or exit lanes;

(ii) ATC rules, pilot qualifications and aircraft equipment;

(iii) entry or exit lanes and areas where specific local rules apply.

(2) low level familiarisation:

(i) actions before descending;

(ii) visual impressions and height keeping at low altitude;

(iii) effects of speed and inertia during turns;

(iv) effects of wind and turbulence;

(3) low level operation:

(i) weather considerations;

(ii) low cloud and good visibility;

(iii) low cloud and poor visibility;

(iv) avoidance of moderate to heavy rain showers;

(v) effects of precipitation;

(vi) joining a circuit;

(vii) bad weather circuit, approach and landing.

(b) Air exercise:

(1) general considerations: entry or exit lanes and areas where specific local rules apply;

(2) low level familiarisation:

(i) actions before descending;

(ii) visual impressions and height keeping at low altitude;

(iii) effects of speed and inertia during turns;
(iv) effects of wind and turbulence;
(v) hazards of operating at low levels;

(3) low level operation:
(i) weather considerations;
(ii) low cloud and good visibility;
(iii) low cloud and poor visibility;
(iv) avoidance of moderate to heavy rain showers;
(v) effects of precipitation (forward visibility);
(vi) joining a circuit;
(vii) bad weather circuit, approach and landing.

EXERCISE 18c: USE OF RADIO NAVIGATION AIDS UNDER VFR

(a) Long briefing objectives:

(1) use of VOR:
(i) availability, AIP and frequencies;
(ii) signal reception range;
(iii) selection and identification;
(iv) radials and method of numbering;
(v) use of OBS;
(vi) to or from indication and station passage;
(vii) selection, interception and maintaining a radial;
(viii) use of two stations to determine position.

(2) use of ADF equipment:
(i) availability of NDB stations, AIP and frequencies;
(ii) signal reception range;
(iii) selection and identification;
(iv) orientation in relation to NDP;
(v) homing to an NDP.
(3) use of VHF/DF:
   (i) availability, AIP and frequencies;
   (ii) R/T procedures;
   (iii) obtaining QDMs and QTEs.

(4) use of radar facilities:
   (i) availability and provision of service and AIS;
   (ii) types of service;
   (iii) R/T procedures and use of transponder:
      (A) mode selection;
      (B) emergency codes.

(5) use of distance DME:
   (i) availability and AIP;
   (ii) operating modes;
   (iii) slant range.

(6) use of GNSS (RNAV – SATNAV):
   (i) availability;
   (ii) operating modes;
   (iii) limitations.

(b) Air exercise:

(1) use of VOR:
   (i) availability, AIP and frequencies;
   (ii) selection and identification;
   (iii) use of OBS;
   (iv) to or from indications: orientation;
   (v) use of CDI;
   (vi) determination of radial;
(vii) intercepting and maintaining a radial;
(viii) VOR passage;
(ix) obtaining a fix from two VORs.

(2) use of ADF equipment;
(i) availability of NDB stations, AIP and frequencies;
(ii) selection and identification;
(iii) orientation relative to the beacon;
(iv) homing.

(3) use of VHF/DF:
(i) availability, AIP and frequencies;
(ii) R/T procedures and ATC liaison;
(iii) obtaining a QDM and homing.

(4) use of en-route or terminal radar:
(i) availability and AIP;
(ii) procedures and ATC liaison;
(iii) pilot’s responsibilities;
(iv) secondary surveillance radar;
(v) transponders;
(vi) code selection;
(vii) interrogation and reply.

(5) use of DME:
(i) station selection and identification;
(ii) modes of operation.

(6) use of GNSS (RNAV – SATNAV):
(i) setting up;
(ii) operation;
(iii) interpretation.
EXERCISE 19: BASIC INSTRUMENT FLIGHT

(a) Long briefing objectives:

(1) flight instruments;

(i) physiological sensations;
(ii) instrument appreciation;
(iii) attitude instrument flight;
(iv) pitch indications;
(v) bank indications;
(vi) different dial presentations;
(vii) introduction to the use of the attitude indicator;
(viii) pitch attitude;
(ix) bank attitude;
(x) maintenance of heading and balanced flight;
(xi) instrument limitations (inclusive system failures).

(2) attitude, power and performance;

(i) attitude instrument flight;
(ii) control instruments;
(iii) performance instruments;
(iv) effect of changing power and configuration;
(v) cross-checking the instrument indications;
(vi) instrument interpretation;
(vii) direct and indirect indications (performance instruments);
(viii) instrument lag;
(ix) selective radial scan;

(3) basic flight manoeuvres (full panel);

(i) straight and level flight at various air speeds and aeroplane configurations;
(ii) climbing;
(iii) descending;

(iv) standard rate turns onto pre-selected headings:

(A) level;

(B) climbing;

(C) descending.

(b) Air exercise:

(1) Introduction to instrument flying

(i) flight instruments;

(ii) physiological sensations;

(iii) instrument appreciation;

(iv) attitude instrument flight;

(v) pitch attitude;

(vi) bank attitude;

(vii) maintenance of heading and balanced flight;

(2) attitude, power and performance;

(i) attitude instrument flight;

(ii) effect of changing power and configuration;

(iii) cross-checking the instruments;

(iv) selective radial scan;

(3) basic flight manoeuvres (full panel);

(i) straight and level flight at various air speeds and aeroplane configurations;

(ii) climbing;

(iii) descending;

(iv) standard rate turns onto pre-selected headings:

(A) level;

(B) climbing;
(C) descending.

**EXERCISE 20: NIGHT FLYING (if night instructional qualification required)**

(a) Long briefing objectives:
   
   (1) startup procedures;
   
   (2) local procedures: including ATC liaison;
   
   (3) taxiing:
      
      (i) parking area and taxiway lighting;
      
      (ii) judgement of speed and distances;
      
      (iii) use of taxiway lights;
      
      (iv) avoidance of hazards: obstruction lighting;
      
      (v) instrument checks;
      
      (vi) holding point: lighting procedure;
      
      (vii) initial familiarisation at night;
      
      (viii) local area orientation;
      
      (ix) significance of lights on other aircraft;
      
      (x) ground obstruction lights;
      
      (xi) division of piloting effort: external or instrument reference;
      
      (xii) rejoining procedure;
      
      (xiii) aerodrome lighting: approach and runway lighting (including VASI and PAPI):
         
         (A) threshold lights;
         
         (B) approach lighting;
         
         (C) visual approach slope indicator systems.

(4) night circuits;
   
   (i) take-off and climb:
      
      (A) line up;
      
      (B) visual references during the take-off run;
(C) transfer to instruments;
(D) establishing the initial climb;
(E) use of flight instruments;
(F) instrument climb and initial turn.

(iii) circuit:
(A) aeroplane positioning: reference to runway lighting;
(B) the traffic pattern and look-out;
(C) initial approach and runway lighting demonstration;
(D) aeroplane positioning;
(E) changing aspect of runway lights and VASI (or PAPI);
(F) intercepting the correct approach path;
(G) the climb away.

(iii) approach and landing:
(A) positioning, base leg and final approach;
(B) diurnal wind effect;
(C) use of landing lights;
(D) the flare and touchdown;
(E) the roll out;
(F) turning off the runway: control of speed.

(iv) missed approach:
(A) use of instruments;
(B) re-positioning in the circuit pattern;

(5) night navigation:
(i) particular emphasis on flight planning;
(ii) selection of ground features visible at night:
(A) air light beacons;
(B) effect of cockpit lighting on map colours;

(C) use of radio aids;

(D) effect of moonlight upon visibility at night;

(iii) emphasis on maintaining a ‘minimum safe altitude’;

(iv) alternate aerodromes: restricted availability;

(v) restricted recognition of weather deterioration;

(vi) lost procedures;

(6) night emergencies;

   (i) radio failure;

   (ii) failure of runway lighting;

   (iii) failure of aeroplane landing lights;

   (iv) failure of aeroplane internal lighting;

   (v) failure of aeroplane navigation lights;

   (vi) total electrical failure;

   (vii) abandoned take-off;

   (viii) engine failure;

   (ix) obstructed runway procedure.

(b) Air exercise: during the air exercise all long briefing objectives mentioned above should also be trained on site and the student instructor should demonstrate the following items:

   (1) how to plan and to perform a flight at night;

   (2) how to advise the student pilot to plan and prepare a flight at night;

   (3) how to advise the student pilot to perform a flight at night;

   (4) how to analyse and correct errors as necessary.

B. Helicopters

GROUND INSTRUCTION

Note: During ground instruction the student instructor should pay specific attention to the teaching of enhanced ground instruction in weather
interpretation, planning and route assessment, decision making on encountering DVE including reversing course or conduction a precautionary landing.

**Part 2**

**AIR EXERCISES**

(a) The air exercises are similar to those used for the training of PPL (H) but with additional items designed to cover the needs of an FI.

(b) The numbering of exercises should be used primarily as an exercise reference list and as a broad instructional sequencing guide: therefore the demonstrations and practices need not necessarily be given in the order listed. The actual order and content will depend upon the following interrelated factors:

1. the applicant’s progress and ability;
2. the weather conditions affecting the flight;
3. the flight time available;
4. instructional technique considerations;
5. the local operating environment;
6. applicability of the exercises to the helicopter type.

(c) It follows that student instructors will eventually be faced with similar interrelated factors. They should be shown and taught how to construct flight lesson plans, taking these factors into account, so as to make the best use of each flight lesson, combining parts of the set exercises as necessary.

**GENERAL**

(d) The briefing normally includes a statement of the objectives and a brief reference to principles of flight only if relevant. An explanation is to be given of exactly what air exercises are to be taught by the instructor and practised by the student during the flight. It should include how the flight will be conducted about who is to fly the helicopter and what airmanship, weather and flight safety aspects currently apply. The nature of the lesson will govern the order in which the constituent parts are to be taught.

(e) The four basic components of the briefing will be:

1. the aim;
2. principles of flight (briefest reference only);
3. the air exercise(s) (what, and how and by whom);
4. airmanship (weather, flight safety etc.).
PLANNING OF FLIGHT LESSONS

(f) The preparation of lesson plans is an essential prerequisite of good instruction and the student instructor is to be given supervised practice in the planning and practical application of flight lesson plans.

GENERAL CONSIDERATIONS

(g) The student instructor should complete flight training to practise the principles of basic instruction at the PPL (H) level.

(h) During this training, except when acting as a student pilot for mutual flights, the student instructor occupies the seat normally occupied by the FI (H).

(i) It is to be noted that airmanship and look-out is a vital ingredient of all flight operations. Therefore, in the following air exercises the relevant aspects of airmanship are to be stressed at all times.

(j) If the privileges of the FI (H) certificate are to include instruction for night flying, exercise 28 should be undertaken either as part of the course or subsequent to certificate issue.

(k) The student instructor should learn how to identify common errors and how to correct them properly, which should be emphasised at all times.

(l) The student instructor should be trained to keep in mind that wherever possible, flight simulation should be used to demonstrate to student pilots the effects of flight into DVE and to enhance their understanding and need for avoidance of this potentially fatal flight regime.

SYLLABUS OF FLIGHT INSTRUCTION CONTENTS

LONG BRIEFINGS AND AIR EXERCISES

EXERCISE 1: FAMILIARISATION WITH THE HELICOPTER

(a) Long briefing objectives:

(1) introduction to the helicopter;

(2) explanation of the cockpit layout;

(3) helicopter and engine systems;

(4) checklist(s) and procedures;

(3) familiarisation with the helicopter controls;

(4) differences when occupying the instructor’s seat;
(5) emergency drills:

(i) action if fire in the air and on the ground: engine, cockpit or cabin and electrical fire;

(ii) system failure drills as applicable to type;

(iii) escape drills: location and use of emergency equipment and exits.

(b) Air exercise: all long briefing objectives mentioned above should also be trained on site during the air exercise.

EXERCISE 2: PREPARATION FOR AND ACTION AFTER FLIGHT

(a) Long briefing objectives:

(1) flight authorisation and helicopter acceptance, including technical log (if applicable) and certificate of maintenance:

(2) equipment required for flight (maps, etc.);

(3) external checks;

(4) internal checks;

(5) student comfort, harness, seat and rudder pedal adjustment;

(6) starting and after starting checks;

(7) system, power or serviceability checks (as applicable);

(8) closing down or shutting down the helicopter (including system checks).

(9) parking and leaving the helicopter (including safety or security as applicable);

(10) completion of authorisation sheet and helicopter serviceability documents.

(b) Air exercise: all long briefing objectives mentioned above should also be trained on site during the air exercise.

EXERCISE 3: AIR EXPERIENCE

(a) Long briefing objectives:

Note: there is no requirement for a long briefing for this exercise.

(b) Air exercise:

(1) air experience;

(2) cockpit layout, ergonomics and controls;
(3) cockpit procedures: stability and control.

**EXERCISE 4: EFFECTS OF CONTROLS**

(a) Long briefing objectives:

1. function of the flying controls (primary and secondary effect);
2. effect of air speed;
3. effect of power changes (torque);
4. effect of yaw (sideslip);
5. effect of disc loading (bank and flare);
6. effect on controls of selecting hydraulics on/off;
7. effect of control friction;
8. use of instruments;
9. operation of carburettor heat or anti-icing control.

(b) Air exercise: all long briefing objectives mentioned above should also be trained on site during the air exercise.

**EXERCISE 5: POWER AND ATTITUDE CHANGES**

(a) Long briefing objectives:

1. relationship between cyclic control position, disc attitude, fuselage attitude and air speed flap back;
2. power required diagram in relation to air speed;
3. power and air speed changes in level flight;
4. use of the instruments for precision;
5. engine and air speed limitations;

(b) Air exercise:

1. relationship between cyclic control position, disc attitude, fuselage attitude and air speed flap back;
2. power and air speed changes in level flight;
3. use of instruments for precision (including instrument scan and look-out).

**EXERCISE 6: LEVEL FLIGHT, CLIMBING, DESCENDING AND TURNING**
Note: for ease of training this exercise is divided into four separate parts in the PPL(H) syllabus but may be taught complete or in convenient parts.

(a) Long briefing objectives:

   (1) basic factors involved in level flight;
   (2) normal power settings;
   (3) use of control friction or trim;
   (4) importance of maintaining direction and balance;
   (5) power required or power available diagram;
   (6) optimum climb and descent speeds, angles or rates;
   (7) importance of balance, attitude and co-ordination in the turn;
   (8) effects of turning on rate of climb or descent;
   (9) use of the gyro direction or heading indicator and compass;
   (10) use of instruments for precision.

(b) Air exercises:

   (1) maintaining straight and level flight at normal cruise power;
   (2) control in pitch, including use of control friction or trim;
   (3) use of the ball or yaw string to maintain direction and balance;
   (4) setting and use of power for selected air speeds and speed changes;
   (5) entry to climb;
   (6) normal and maximum rate of climb;
   (7) levelling off from climb at selected altitudes or heights;
   (8) entry to descent;
   (9) effect of power and air speed on rate of descent;
   (10) levelling off from descent at selected altitudes or heights;
   (11) entry to medium rate turns;
   (12) importance of balance, attitude and co-ordination to maintain level turn;
(13) resuming straight and level flight;
(14) turns onto selected headings, use of direction indicator and compass;
(15) turns whilst climbing and descending;
(16) effect of turn on rate of climb or descent;
(17) use of instruments for precision (including instrument scan and look-out).

**EXERCISE 7: AUTOROTATION**

(a) Long briefing objectives:

(1) characteristics of autorotation;
(2) safety checks (including look-out and verbal warning);
(3) entry and development of autorotation;
(4) effect of AUM, IAS, disc loading, G forces and density altitude on RRPM and rate of descent;
(5) rotor and engine limitations;
(6) control of air speed and RRPM;
(7) recovery to powered flight;
(8) throttle override and control of RPM or RRPM during re-engagement (as applicable);
(9) danger of vortex condition during recovery.

(b) Air exercise:

(1) safety checks (including verbal warning and look-out);
(2) entry to and establishing in autorotation;
(3) effect of IAS and disc loading on RRPM and rate of descent;
(4) control of air speed and RRPM;
(5) recovery to powered flight;
(6) medium turns in autorotation;
(7) simulated engine off landing (as appropriate).

**EXERCISE 8: HOVERING AND HOVER TAXIING**
(a) **Long briefing objectives:**

1. ground effect and power required;
2. effect of wind, attitude and surface;
3. stability in hover and effects of over controlling;
4. effect of control in hover;
5. control and co-ordination during spot turns;
6. requirement for slow hover speed to maintain ground effect;
7. effect of hydraulic failure in hover;
8. specific hazards, for example snow, dust, etc.

(b) **Air exercise:**

1. ground effect and power or height relationship;
2. effect of wind, attitude and surface;
3. stability in hover and effects of over controlling;
4. effect of control and hover technique;
5. gentle forward running touchdown;
6. control and co-ordination during spot (90° clearing) turns;
7. control and co-ordination during hover taxi;
8. dangers of mishandling and over pitching;
9. (where applicable) effect of hydraulics failure in hover;
10. simulated engine failure in the hover and hover taxi.

**EXERCISE 9: TAKE-OFF AND LANDING**

(a) **Long briefing objectives:**

1. pre take-off checks or drills;
2. importance of good look-out;
3. technique for lifting to hover;
4. after take-off checks;
(5) danger of horizontal movement near ground;
(6) dangers of mishandling and over pitching;
(7) technique for landing;
(8) after landing checks;
(9) take-off and landing crosswind and downwind.

(b) Air exercise:
   (1) pre take-off checks or drills;
   (2) pre take-off look-out technique;
   (3) lifting to hover;
   (4) after take-off checks;
   (5) landing;
   (6) after landing checks or drills;
   (7) take-off and landing crosswind and downwind.

EXERCISE 10: TRANSITIONS FROM HOVER TO CLIMB AND APPROACH TO HOVER

(a) Long briefing objectives:
   (1) revision of ground effect;
   (2) translational lift and its effects;
   (3) inflow roll and its effects;
   (4) revision of flap back and its effects;
   (5) avoidance of curve diagram and associated dangers;
   (6) effect or dangers of wind speed and direction during transitions;
   (7) transition to climb technique;
   (8) constant angle approach;
   (9) transition to hover technique.

(b) Air exercise:
   (1) revision of take-off and landing;
   (2) transition from hover to climb;
(3) effect of translational lift, inflow roll and flap back;
(4) constant angle approach;
(5) technique for transition from descent to hover;
(6) a variable flare simulated engine off landing.

**EXERCISE 11: CIRCUIT, APPROACH AND LANDING**

(a) Long briefing objectives:

1. circuit and associated procedures;
2. take-off and climb (including checks or speeds);
3. crosswind leg (including checks, speeds or angles of bank in turns);
4. downwind leg (including pre-landing checks);
5. base leg (including checks, speeds or angles of bank in turns);
6. final approach (including checks or speeds);
7. effect of wind on approach and hover IGE;
8. crosswind approach and landing technique;
9. missed approach and go-around technique (as applicable);
10. steep approach technique (including danger of high sink rate);
11. limited power approach technique (including danger of high speed at touchdown);
12. use of the ground effect;
13. abandoned take-off technique;
14. hydraulic failure drills and hydraulics off landing technique (where applicable);
15. drills or technique for tail rotor control or tail rotor drive failure;
16. engine failure drills in the circuit to include;
17. engine failure
18. on take-off:
   (i) crosswind;
(ii) downwind;

(iii) base leg;

(iv) on final approach.

(19) noise abatement procedures (as applicable).

(b) Air exercise:

(1) revision of transitions and constant angle approach;

(2) basic training circuit, including checks;

(3) crosswind approach and landing technique;

(4) missed approach and go-around technique (as applicable);

(5) steep approach technique;

(6) basic limited power approach or run on technique;

(7) use of ground effect;

(8) hydraulic failure and approach to touchdown with hydraulics off and to recover at safe height (as applicable);

(9) simulated engine failure on take-off, crosswind, downwind, base leg and finals;

(10) variable flare simulated engine off landing.

**EXERCISE 12: FIRST SOLO**

(a) Long briefing objectives:

(1) warning of change of attitude due to reduced and laterally displaced weight;

(2) low tail, low skid or wheel during hover or landing;

(3) dangers of loss of RRPM and over pitching;

(4) pre take-off checks;

(5) into wind take-off;

(6) drills during and after take-off;

(7) normal circuit, approach and landing;

(8) action if an emergency.
(b) Air exercise: all long briefing objectives mentioned above should also be trained on site during the air exercise.

**EXERCISE 13: SIDEWAYS AND BACKWARDS HOVER MANOEUVRING**

(a) Long briefing objectives:

1. revision of hovering;
2. directional stability and weather cocking effect;
3. danger of pitching nose down on recovery from backwards manoeuvring;
4. helicopter limitations for sideways and backwards manoeuvring;
5. effect of CG position.

(b) Air exercise:

1. revision of hovering and 90 ° clearing turns;
2. manoeuvring sideways heading into wind;
3. manoeuvring backwards heading into wind;
4. manoeuvring sideways and backwards heading out of wind;
5. manoeuvring backwards too fast and recovery action.

**EXERCISE 14: SPOT TURNS**

(a) Long briefing objectives:

1. revision of ground effect and effect of wind;
2. weather cocking and control actions;
3. control of RRPM;
4. torque effect;
5. cyclic limiting stops due to CG position (where applicable);
6. rate of turn limitations;
7. spot turn about pilot position;
8. spot turn about tail rotor position;
9. spot turn about helicopter geometric centre;
(10) square (safe visibility) and clearing turn.

(b) Air exercise:

(1) weather cocking, torque effect and control actions;
(2) rate of turn;
(3) spot turn about pilot position;
(4) spot turn about tail rotor position;
(5) spot turn about helicopter geometric centre;
(6) square and clearing turn.

**EXERCISE 15: HOVER OUT OF GROUND EFFECT AND VORTEX RING**

(a) Long briefing objectives:

(1) revision of ground effect and power required diagram;
(2) drift, height and power control, look-out or scan;
(3) vortex ring, (including dangers, recognition and recovery actions);
(4) loss of tail rotor effectiveness.

(b) Air exercise:

(1) to demonstrate hover OGE;
(2) drift, height, power control and look-out, and instrument scan technique;
(3) recognition of incipient stage of vortex ring and settling with power;
(4) recovery action from incipient stage of vortex ring;
(5) recognition of loss of tail rotor effectiveness and recovery actions.

**EXERCISE 16: SIMULATED ENGINE OFF LANDINGS**

(a) Long briefing objectives:

(1) revision of basic autorotation;
(2) effect of AUM, disc loading, density altitude and RRPM decay;
(3) use of cyclic and collective to control speed or RRPM;
(4) torque effect;
(5) use of flare or turn to restore RRPM;
(6) technique for variable flare simulated EOL;
(7) technique for constant attitude simulated EOL;
(8) revision of technique for hover or hover taxi simulated EOL;
(9) emergency technique for engine failure during transition;
(10) technique for low level simulated EOL.

(b) Air exercise

(1) revision of entry to and control in autorotation;
(2) variable flare simulated EOL
(3) constant attitude simulated EOL;
(4) hover simulated EOL;
(5) hover taxi simulated EOL;
(6) low level simulated EOL.

EXERCISE 17: ADVANCED AUTOROTATIONS

(a) Long briefing objectives:

(1) effect of air speed or AUM on angles or rates of descent
(2) effect of RRPM setting on angle or rate of descent;
(3) reason and technique for range autorotation;
(4) reason and technique for constant attitude autorotation;
(5) reason and technique for low speed and ‘S’ turns in autorotation;
(6) speed or bank limitations in turns in autorotation;
(7) revision of re-engagement or go-around procedures.

(b) Air exercise:

(1) selection of ground marker and standard datum height to determine
distance covered during various autorotation techniques;
(2) revision of basic autorotation;
(3) technique for range autorotation;
(4) technique for constant attitude autorotation;
(5) technique for low speed autorotation, including need for timely speed recovery;

(6) technique for ‘S’ turn in autorotation;

(7) 180 and 360 ° turns in autorotation;

(8) revision of re-engagement and go-around technique.

**EXERCISE 18: PRACTICE FORCED LANDINGS**

(a) Long briefing objectives:

(1) types of terrain or surface options for choice of best landing area;

(2) practice forced landing procedure;

(3) forced landing checks and crash actions;

(4) rules or height for recovery and go-around.

(b) Air exercise:

(1) recognition of types of terrain from normal cruise height or altitude;

(2) practice forced landing technique;

(3) revision of recovery or go-around technique.

**EXERCISE 19: STEEP TURNS**

(a) Long briefing objectives:

(1) air speed or angle of bank limitations;

(2) technique for co-ordination to hold bank or attitude;

(3) revision of speed or bank limitations in autorotation including RRPM control;

(5) significance of disc loading, vibration and control feedback;

(6) effect of wind in turns at low level.

(b) Air exercise:

(1) technique for turning at 30 ° of bank;

(2) technique for turning at 45 ° of bank (where possible);
(3) steep autorotative turns;

(4) explanation of faults in the turn: balance, attitude, bank and co-ordination;

(5) effect of wind at low level.

**EXERCISE 20: TRANSITIONS**

(a) Long briefing objectives:

(1) revision of effect of ground cushion, translational lift and flap back;

(2) training requirement for precision exercise;

(3) technique for transition to forward flight and back to hover as precision exercise;

(4) effect of wind.

(b) Air exercise:

(1) transition from hover to minimum 50 knots IAS and back to hover;  
   Note: select constant height (20 - 30 ft.) and maintain.

(2) effect of wind.

**EXERCISE 21: QUICK STOPS**

(a) Long briefing objectives:

(1) power control co-ordination;

(2) revision of effect of wind;

(3) technique for quick stop into wind;

(4) technique for quick stop from crosswind;

(5) revision of air speed and angles of bank limitations;

(6) technique for emergency turn from downwind;

(7) technique for quick stop from downwind from high speed: flare and turn;

(8) technique for quick stop from downwind from low speed: turn and flare;

   Note: use reasonable datum speed for example high speed, low speed.

(9) danger of holding flare when downwind, (vortex ring) - (minimum speed 70 knots);
(10) to revise danger of high disc loading.

(b) Air exercise:

(1) technique for quick stop into wind;
(2) technique for quick stop from crosswind;
(3) danger of vortex ring and disc loading;
(4) technique for quick stop from downwind with low speed;
(5) technique for quick stop from downwind with high speed;
(6) emergency turns from downwind.

EXERCISE 22: NAVIGATION

(a) Long briefing objectives:

Note: to be broken down into manageable parts at discretion of instructor.

(1) flight planning:

(i) weather forecasts and actuals;
(ii) map selection, orientation, preparation and use:
   (A) choice of route;
   (B) regulated or controlled airspace;
   (C) danger, prohibited and restricted areas;
   (D) safety altitude.

(iii) calculations:
   (A) magnetic heading(s), time(s) en route;
   (B) fuel consumption;
   (C) mass and balance.

(iv) flight information:
   (A) NOTAMs etc;
   (B) noting of required radio frequencies;
   (C) selection of alternate landing sites.

(v) helicopter documentation;
(vi) notification of the flight:
   (A) pre-flight administration procedures;
   (B) flight plan form (where appropriate).

(2) departure:
   (i) organisation of cockpit workload;
   (ii) departure procedures:
      (A) altimeter settings;
      (B) ATC liaison in controlled or regulated airspace;
      (C) setting heading procedure;
      (D) noting of ETA(s);
      (E) maintenance of height or altitude and heading.
   (iii) procedure for revisions of ETA and headings to include:
      (A) 10 ° line, double track, track error and closing angle;
      (B) 1 in 60 rule;
   (iv) amending an ETA;
   (v) log keeping;
   (vi) use of radio;
   (vii) use of nav aids;
   (viii) weather monitoring and minimum weather conditions for continuation of flight;
   (ix) significance of in-flight decision making;
   (x) technique for transiting controlled or regulated airspace;
   (xi) uncertainty of position procedure;
   (xii) lost procedure.

(3) arrival:
   (i) aerodrome joining procedure, in particular ATC liaison in controlled or regulated airspace:
      (A) altimeter setting;
(B) entering traffic pattern;

(C) circuit procedures.

(ii) parking procedures, in particular:

(A) security of helicopter;

(B) refueling;

(C) closing of flight plan, (if appropriate);

(D) post flight administrative procedures.

(4) navigation problems at low heights and reduced visibility:

(i) actions before descending;

(ii) significance of hazards, (for example obstacles and other traffic);

(iii) difficulties of map reading;

(iv) effects of wind and turbulence;

(v) significance of avoiding noise sensitive areas;

(vi) procedures for joining a circuit from low level;

(vii) procedures for a bad weather circuit and landing;

(viii) actions in the event of encountering DVE;

(ix) appropriate procedures and choice of landing area for precautionary landings

(x) decision to divert of conduct precautionary landing

(xi) precautionary landing

(5) radio navigation:

(i) use of VOR:

(A) availability, AIP and frequencies;

(B) selection and identification;

(C) use of OBS;

(D) to or from indications: orientation;

(E) use of CDI;
(F) determination of radial;

(G) intercepting and maintaining a radial;

(H) VOR passage;

(I) obtaining a fix from two VORs.

(ii) use of ADF equipment:

(A) availability of NDB stations, AIP and frequencies;

(B) selection and identification;

(C) orientation relative to beacon;

(D) homing.

(iii) use of VHF/DF

(A) availability, AIP and frequencies;

(B) R/T procedures and ATC liaison;

(C) obtaining a QDM and homing.

(iv) use of en-route or terminal radar:

(A) availability and AIP;

(B) procedures and ATC liaison;

(C) pilots responsibilities;

(D) secondary surveillance radar:

   (a) transponders;

   (b) code selection;

(E) interrogation and reply.

(iv) use of DME:

(A) station selection and identification;

(B) modes of operation: distance, groundspeed and time to run.

(v) use of GNSS:

(A) selection of waypoints;
(B) to or from indications and orientation;

(C) error messages;

(D) hazards of over-reliance in the continuation of flight in DVE.

(b) Air exercise:

(1) navigation procedures as necessary;

(2) to advise student and correct errors as necessary;

(3) map reading techniques;

(4) the significance of calculations;

(5) revision of headings and ETA’s;

(6) use of radio;

(7) use of nav aids: ADF/NDB, VOR, VHF/DF, DME and transponder;

(8) cross-country flying by using visual reference, DR, GNNS and, where available, radio navigation aids; simulation of deteriorating weather conditions and actions to divert or conduct precautionary landing;

(8) log keeping;

(9) importance of decision making;

(10) procedure to deal with uncertainty of position;

(11) lost procedure;

(12) appropriate procedures and choice of landing area for precautionary landings;

(13) aerodrome joining procedure;

(14) parking and shut-down procedures;

(15) post-flight administration procedures.

**EXERCISE 23: ADVANCED TAKE-OFF, LANDINGS AND TRANSITIONS**

(a) Long briefing objectives:

(1) Revision of landing and take-off out of wind (performance reduction);

(2) revision of wind limitations;

(3) revision of directional stability variation when out of wind;
(4) revision of power required diagram;
(5) technique for downwind transitions;
(6) technique for vertical take-off over obstacles;
(7) reconnaissance technique for landing site;
(8) power checks;
(9) technique for running landing;
(10) technique for zero speed landing;
(11) technique for crosswind and downwind landings;
(12) steep approach, including dangers;
(13) revision of go-around procedures.

(b) Air exercise

(1) technique for downwind transition;
(2) technique for vertical take-off over obstacles;
(3) reconnaissance technique for landing site;
(4) power check and assessment;
(5) technique for running landing;
(6) technique for zero speed landing;
(7) technique for crosswind and downwind landings;
(8) technique for steep approach;
(9) go-around procedures.

**EXERCISE 24: SLOPING GROUND**

(a) Long briefing objectives:

(1) limitations;
(2) wind and slope relationship, including blade and control stops;
(3) effect of CG when on slope;
(4) ground effect and power required when on slope;
(5) landing technique when on slope, left, right and nose-up;
(6) avoidance of dynamic rollover, dangers of soft ground and sideways movement;
(7) dangers of over controlling near ground on slope;
(8) danger of striking main or tail rotor on up slope.

(b) Air exercise

(1) technique for assessing slope angle;
(2) technique for landing and take-off left skid up slope;
(3) technique for landing and take-off right skid up slope;
(4) technique for landing nose up slope;
(5) dangers of over controlling near ground.

**EXERCISE 25: LIMITED POWER**

(a) Long briefing objectives:

(1) use of appropriate helicopter performance graphs;
(2) selection of technique according to available power;
(3) effect of wind on available power.

(b) Air exercise: to revise and refine techniques demonstrated in exercise 23.

**EXERCISE 26: CONFINED AREAS**

(a) Long briefing objectives:

(1) revision of use of helicopter performance graphs;
(2) procedure for locating landing site and selecting site marker;
(3) procedures for assessing wind speed and direction;
(4) landing site reconnaissance techniques;
(5) reason for selecting landing markers;
(6) procedure for selecting direction and type of approach;
(7) dangers of out of wind approach;
(8) circuit procedures;
(9) reason for approach to committal point and go-around, (practice approach);

(10) approach technique;

(11) revision of clearing turn and landing (sloping ground technique);

(12) hover power check or performance assessment IGE and OGE (if necessary);

(13) take-off procedures.

(b) Air exercise

(1) procedures for locating landing site and selecting site marker;

(2) procedures for assessing wind speed and direction;

(3) landing site reconnaissance techniques;

(4) selecting landing markers, direction and type of approach;

(5) circuit procedure;

(6) practice approach, go-around and approach technique;

(7) revision of clearing turn and landing (sloping ground technique);

(8) hover power check or performance assessment IGE and OGE (if necessary);

(9) take-off procedures.

EXERCISE 27: BASIC INSTRUMENT FLIGHT

(a) Long briefing objectives:

(1) physiological sensations;

(2) instrument appreciation;

(3) attitude instrument flight;

(4) instrument scan;

(5) instrument limitations;

(6) basic manoeuvres by sole reference to instruments:

(i) straight and level flight at various air speeds and configurations;

(ii) climbing and descending;
(iii) standard rate turns, climbing and descending, onto selected headings;

(iv) recoveries from climbing and descending turns (unusual attitudes).

(b) Air exercise:

(1) attitude instrument flight and instrument scan;

(2) basic manoeuvres by sole reference to instruments:

(i) straight and level flight at various airspeeds and configurations;

(ii) climbing and descending;

(iii) standard rate turns, climbing and descending, onto selected headings;

(iv) recoveries from climbing and descending turns (unusual attitudes).

**EXERCISE 28: NIGHT FLYING (if night instructional qualification required)**

(a) Long briefing objectives:

(1) medical or physiological aspects of night vision;

(2) requirement for torch to be carried (pre-flight inspection, etc.);

(3) use of the landing light;

(4) take-off and hover taxi procedures at night;

(5) night take-off procedure;

(6) cockpit procedures at night;

(7) approach techniques;

(8) night landing techniques;

(9) night autorotation techniques (power recovery at safe height);

(10) technique for practice forced landing at night (using appropriate illumination);

(11) emergency procedures at night;

(12) navigation principles at night;

(13) map marking for night use (highlighting built up or lit areas with thicker lines, etc.).
(b) Air exercise:

(1) use of torch for pre-flight inspection;
(2) use of landing light;
(3) night take-off to hover (no sideways or backwards movement);
(4) night hover taxi (higher and slower than by day);
(5) night transition procedure;
(6) night circuit;
(7) night approach and landing (including use of landing light);
(8) night autorotation (power recovery at safe height);
(9) practice forced landing at night (using appropriate illumination);
(10) night emergency procedures;
(11) night cross country techniques, as appropriate.

C. Airships

Part 2

AIR EXERCISES

(a) The air exercises are similar to those used for the training of PPL (As) but with additional items designed to cover the needs of an FI.

(b) The numbering of exercises should be used primarily as an exercise reference list and as a broad instructional sequencing guide: therefore the demonstrations and practices need not necessarily be given in the order listed. The actual order and content will depend upon the following interrelated factors:

(1) the applicant’s progress and ability;
(2) the weather conditions affecting the flight;
(3) the flight time available;
(4) instructional technique considerations;
(5) the local operating environment.

(c) It follows that student instructors will eventually be faced with similar
interrelated factors. They should be shown and taught how to construct flight lesson plans, taking these factors into account, so as to make the best use of each flight lesson, combining parts of the set exercises as necessary.

**GENERAL**

(d) The briefing normally includes a statement of the aim and a brief allusion to principles of flight only if relevant. An explanation is to be given of exactly what air exercises are to be taught by the instructor and practised by the student during the flight. It should include how the flight will be conducted about who is to fly the airship and what airmanship, weather and flight safety aspects currently apply. The nature of the lesson will govern the order in which the constituent parts are to be taught.

(e) The four basic components of the briefing will be:

1. the aim;
2. principles of flight (briefest reference only);
3. the air exercise(s) (what, and how and by whom);
4. airmanship (weather, flight safety etc.).

**PLANNING OF FLIGHT LESSONS**

(f) The preparation of lesson plans is an essential prerequisite of good instruction and the student instructor is to be given supervised practice in the planning and practical application of flight lesson plans.

**GENERAL CONSIDERATIONS**

(g) The student instructor should complete flight training to practise the principles of basic instruction at the PPL (As) level.

(h) During this training, except when acting as a student pilot for mutual flights, the student instructor occupies the seat normally occupied by the FI (As).

(i) It is to be noted that airmanship and look-out is a vital ingredient of all flight operations. Therefore, in the following air exercises the relevant aspects of airmanship are to be stressed at all times.

(j) The exercises 15 and 16 of the flight instruction syllabus should be undertaken at night in addition to by day as part of the course.

(k) The student instructor should learn how to identify common errors and how to correct them properly, which should be emphasised at all times.

**SYLLABUS OF FLIGHT INSTRUCTION CONTENTS**

**LONG BRIEFINGS AND AIR EXERCISES**

Note: although exercise 16 is not required for the PPL (As) course it is a...
requirement for the FI (As) course.

**EXERCISE 1: FAMILIARISATION WITH THE AIRSHIP**

(a) Long briefing objectives:

(1) introduction to the airship;
(2) characteristics of the airship;
(3) cockpit layout;
(4) airship and engine systems;
(5) use of the checklist(s) and procedures;
(6) to familiarise the student with the airship controls;
(7) differences when occupying the instructor’s seat;
(8) emergency drills:
   (i) action if fire in the air or on the ground: engine, cockpit or cabin and electrical fire;
   (ii) system failure drills as applicable to type;
   (iii) escape drills: location and use of emergency equipment and exits.

(b) Air exercise: all long briefing objectives mentioned above should also be trained on site during the air exercise.

**EXERCISE 2: PREPARATION FOR AND ACTION AFTER FLIGHT**

(a) Long briefing objectives:

(1) flight authorisation and airship acceptance including tech log (if applicable) and certificate of maintenance;
(2) equipment required for flight (maps, etc.);
(3) external checks;
(4) internal checks;
(5) student comfort, harness, seat and rudder pedal adjustment;
(6) starting and after starting checks;
(7) system, power or serviceability checks (as applicable);
(8) closing down or shutting down the airship (including system checks);
(9) parking, masting and unmasting, leaving the airship (including safety or security as applicable);

(10) completion of the authorisation sheet and airship serviceability documents;

(b) Air exercise: all long briefing objectives mentioned above should also be trained on site during the air exercise.

**EXERCISE 3: AIR EXPERIENCE**

(a) Long briefing objectives:

Note: there is no requirement for a long briefing for this exercise.

(b) Air exercise:

(1) air experience;

(2) cockpit layout, ergonomics and controls;

(3) cockpit procedures: stability and control.

**EXERCISE 4: EFFECTS OF CONTROLS**

(a) Long briefing objectives:

(1) function of the flying controls (primary and secondary effect);

(2) effect of air speed;

(3) effect of power changes;

(4) effect of trimming and other controls;

(5) use of instruments;

(6) use of carburettor heat.

(b) Air exercise:

(1) function of the flying controls;

(2) effect of air speed;

(3) effect of power changes;

(4) effect of trimming and other controls;

(5) use of instruments (including instrument scan);

(6) use of carburettor heat.

**EXERCISE 5: GROUND MANOEUVERING**
(a) Long briefing objectives:
   (1) pre-taxi checks;
   (2) starting, control of speed and stopping;
   (3) engine handling;
   (4) masting procedures;
   (5) control of direction and turning;
   (6) effects of wind;
   (7) effects of ground surface;
   (8) marshalling signals;
   (9) instrument checks;
   (10) ATC procedures;
   (11) emergencies.

(b) Air exercise:
   (1) starting, control of speed and stopping;
   (2) engine handling;
   (3) masting procedures;
   (4) control of direction and turning;
   (5) effect of wind.

EXERCISE 6: TAKE-OFF PROCEDURES

(a) Long briefing objectives:
   (1) pre take-off checks;
   (2) take-off with different static heaviness;
   (3) drills during and after take-off;
   (4) noise abatement procedures.

(b) Air exercise:
   (1) take-off with different static heaviness;
(2) drills during and after take-off.

**EXERCISE 6e: EMERGENCIES**

(a) Long briefing objectives:

(1) abandoned take-off;
(2) engine failures and actions after take-off;
(3) malfunctions of thrust vector control;
(4) aerodynamic control failures;
(5) electrical and system failures.

(b) Air exercise:

(1) how to abandon a take-off;
(2) engine failure and suitable action;
(3) malfunctions of thrust vector control;
(4) aerodynamic control failures.

**EXERCISE 7: CLIMBING**

(a) Long briefing objectives:

(1) entry and how to maintain the normal and max rate of climb;
(2) levelling off procedure;
(3) how to level off at selected altitudes;
(4) maximum angle of climb;
(5) maximum rate of climb.

(b) Air exercise:

(1) how to level off at selected altitudes;
(2) maximum angle of climb.

**EXERCISE 8: STRAIGHT AND LEVEL FLIGHT**

(a) Long briefing objectives:

(1) how to attain and maintain straight and level flight;
(2) flight at or close to pressure height;
(3) control in pitch, including use of trim;
(4) at selected air speeds (use of power);
(5) during speed changes;
(6) use of instruments for precision.

(b) Air exercise:
(1) how to attain and maintain straight and level flight;
(2) flight at or close to pressure height;
(3) control in pitch, including use of trim;
(4) at selected air speeds (use of power);
(5) during speed changes.

**EXERCISE 9: DESCENDING**

(a) Long briefing objectives:
(1) entry, maintaining and levelling off techniques;
(2) levelling off at selected altitudes;
(3) maximum rate of descent;
(4) maximum angle of descent;
(5) use of instruments for precision flight.

(b) Air exercise:
(1) levelling off at selected altitudes;
(2) maximum rate of descent;
(3) maximum angle of descent.

**EXERCISE 10: TURNING**

(a) Long briefing objectives:
(1) entry and maintaining level turns;
(2) resuming straight flight;
(3) faults in the turn;
(4) climbing turns;
(5) descending turns;
(6) turns to selected headings use of gyro heading indicator and compass;
(7) use of instruments for precision.

(b) Air exercise

(1) faults in the turn and correction techniques;
(2) climbing turns;
(3) descending turns.

**EXERCISE 11: HOVERING**

(a) Long briefing objectives: hovering manoeuvres (as applicable).

(b) Air exercise: hovering manoeuvres (as applicable).

**EXERCISE 12: APPROACH AND LANDING**

(a) Long briefing objectives:

(1) effect of wind on approach and touchdown speeds;
(2) landing with different static heaviness;
(3) missed approach and go-around procedures;
(4) noise abatement procedures.

(b) Air exercise

(1) a landing with different static heaviness;
(2) missed approach and go-around procedures.

**EXERCISE 12e: EMERGENCIES**

(a) Long briefing objectives:

(1) aborted approach or go-around;
(2) malfunction of thrust vector control;
(3) envelope emergencies;
(4) fire emergencies;
(5) aerodynamic control failures;
(6) electrical and system failures.
(b) Air exercise: emergency drills and actions.

**EXERCISE 13: PRECAUTIONARY LANDING**

(a) Long briefing objectives:
   (1) occasions necessitating a precautionary landing;
   (2) in-flight conditions;
   (3) landing area selection;
   (4) circuit and approach.

(b) Air exercise:
   (1) how to perform the landing area selection;
   (2) circuit and approach.

**EXERCISE 14a: NAVIGATION**

(a) Long briefing objectives:
   (1) how to do the flight planning;
   (2) departure for a navigation flight;
   (3) in-flight navigational techniques;
   (4) arrival and aerodrome joining procedures;

(b) Air exercise:
   (1) complete flight planning of a navigation flight;
   (2) departure for a navigation flight;
   (3) in-flight navigational techniques;
   (4) arrival and aerodrome joining procedures.

**EXERCISE 14b: NAVIGATION AT LOWER LEVELS AND IN REDUCED VISIBILITY**

(a) Long briefing objectives:

(b) 
   (1) actions before descending;
   (2) possible hazards (for example obstacles and terrain) and actions;
   (3) student difficulties of map reading;
(4) effects of winds, turbulence and precipitation;
(5) vertical situational awareness;
(6) avoidance of noise sensitive areas;
(7) joining the circuit;
(8) bad weather circuit and landing.

(c) Air exercise:
(1) actions before descending;
(2) map reading techniques;
(3) vertical situational awareness;
(4) avoidance of noise sensitive areas;
(5) joining the circuit;
(6) bad weather circuit and landing.

**EXERCISE 14c: RADIO NAVIGATION**

(a) Long briefing objectives:
(1) use of VOR;
(2) use of ADF equipment;
(3) use of NDB stations;
(4) use of VHF/DF;
(5) use of en-route or terminal radar;
(6) use of DME equipment.

(b) Air exercise
(1) use of nav aids;
(2) procedure to deal with uncertainty of position.

**EXERCISE 15: BASIC INSTRUMENT FLIGHT**

(a) Long briefing objectives:
(1) physiological sensations;
(2) instrument appreciation;

(3) attitude instrument flight;

(4) instrument scan;

(5) instrument limitations;

(6) basic manoeuvres by sole reference to the instruments:
   (i) straight and level;
   (ii) climbing and descending;
   (iii) turns, climbing and descending, onto selected headings;
   (iv) recoveries from climbing and descending turns.

(b) Air exercise:

(1) attitude instrument flight and instrument scan;

(2) the basic manoeuvres:
   (i) straight and level;
   (ii) climbing and descending;
   (iii) turns, climbing and descending, onto selected headings;
   (iv) recoveries from climbing and descending turns.

**EXERCISE 16: NIGHT FLYING (if night instructional qualification required)**

(a) Long briefing objectives:

(1) medical and physiological aspects of night vision;

(2) requirement for torch to be carried (pre-flight inspection, etc.);

(3) use of the landing light;

(4) ground manoeuvring procedures at night;

(5) night take-off procedure;

(6) cockpit procedures at night;

(7) approach techniques;

(8) night landing techniques

(9) emergency procedures at night;
(10) navigation principles at night.

(b) **Air exercise:**

(1) use of landing light;

(2) night ground manoeuvring;

(3) night take-off, circuit or approach and landing (including use of landing light).

**AMC2 MFCL.930.FI — Training course**

**FI(S) AND FI (B) TRAINING COURSE GENERAL**

(a) The aim of the FI(S) and FI (B) training course is to train SPL and BPL holders to the level of competence defined in MFCL.920 as instructor competencies.

(b) The training course should develop safety awareness throughout by teaching the knowledge, skills and attitudes relevant to the FI task including at least the following:

(1) refresh the technical knowledge of the student instructor;

(2) train the student instructor to teach the ground subjects and air exercises;

(3) ensure that the student instructor’s flying is of a sufficiently high standard; and

(4) teach the student instructor the principles of basic instruction and to apply them at all training levels.

(c) With the exception of the section on teaching and learning, all the subject detail contained in the ground and flight training syllabus is complementary to the SPL and BPL course syllabus.

(d) The FI training course should give particular stress to the role of the individual in relation to the importance of human factors in the man-machine and theoretical knowledge environment interaction. Special attention should be paid to the applicant’s maturity and judgement including an understanding of adults, their behavioural attitudes and variable levels of education.

(e) During the training course, the applicants should be made aware of their own attitudes to the importance of flight safety. Improving safety awareness should be a fundamental objective throughout the training course. It will be of major importance for the training course to aim at giving applicants the knowledge, skills and attitudes relevant to a flight instructor’s task.

(f) On successful completion of the training course and final test the applicant may be issued with an FI certificate.
CONTENT

(g) The training course consists of two parts:

(1) Part 1, theoretical knowledge including the teaching and learning instruction that should comply with AMC1 MFCL.920;

(2) Part 2, flight instruction.

Part 1

The content of the teaching and learning part of the FI course, as established in AMC1 MFCL.930.FI, should be used as guidance to develop the course syllabus. The course should include at least 55 hours of theoretical knowledge including at least 25 hours teaching and learning instructions for the FI (S) and FI (B) certificate.

Part 2

FLIGHT INSTRUCTION SYLLABUS

An approved FI training course should comprise at least the minimum hours of flight instruction as defined in MFCL.930.FI.

AIR EXERCISES

(a) The air exercises are similar to those used for the training of SPL or BPL but with additional items designed to cover the needs of a flight instructor.

(b) The numbering of exercises should be used primarily as an exercise reference list and as a broad instructional sequencing guide; therefore the demonstrations and practices need not necessarily be given in the order listed. The actual order and content will depend upon the following interrelated factors:

(1) the applicant’s progress and ability;

(2) the weather conditions affecting the flight;

(3) the flight time available;

(4) instructional technique considerations;

(5) the local operating environment;

(6) Applicability of the exercises to the aircraft type.

(c) At the discretion of the instructors some of the exercises may be combined whereas some other exercises may be done in several flights.

(d) It follows that student instructors will eventually be faced with similar inter-related factors. They should be shown and taught how to construct flight lesson plans, taking these factors into account, so as to make the best use of each flight lesson, combining parts of the set exercises as necessary.
GENERAL

(e) The briefing normally includes a statement of the aim and a brief allusion to principles of flight only if relevant. An explanation is to be given of exactly what air exercises are to be taught by the instructor and practised by the student during the flight. It should include how the flight will be conducted with regard to who is to fly the aircraft and what airmanship, weather and flight safety aspects currently apply. The nature of the lesson will govern the order in which the constituent parts are to be taught.

(f) The five basic components of the briefing will be:

(1) the aim;
(2) the air exercise(s) (what, and how and by whom);
(3) flight briefing;
(4) check of understanding;
(5) airmanship.

PLANNING OF FLIGHT LESSONS

(g) The preparation of lesson plans is an essential prerequisite of good instruction and the student instructor is to be given supervised practice in the planning and practical application of flight lesson plans.

GENERAL CONSIDERATIONS

(h) The student instructor should complete flight training in order to practise the principles of basic instruction at the SPL or BPL level. During this training the student instructor occupies the seat normally occupied by the FI.

(i) The instructor providing this instructor training is normally taking over the role of the student pilot. In the case of the course for the FI (B) an additional person holding a BPL or LAPL (B) license or a student pilot for these licenses may be on board in order to function as a student pilot under the supervision of the instructor.

(j) It is to be noted that airmanship is a vital ingredient of all flight operations. Therefore, in the following air exercises the relevant aspects of airmanship are to be stressed at the appropriate times during each flight.

(k) The student instructor should learn how to identify common errors and how to correct them properly, which should be emphasised at all times.

SYLLABUS OF FLIGHT INSTRUCTION CONTENTS

A. SAILPLANES

LONG BRIEFINGS AND AIR EXERCISES
Note: although the fully developed spin in exercise 10 is not required for the LAPL course, it is a requirement for the FI course.

EXERCISE 1: FAMILIARISATION WITH THE SAILPLANE

(a) Objective:

To advise the student instructor on how to familiarise the student with the sailplane which will be used for the training and to test his/her position in the sailplane for comfort, visibility, and ability to use all controls and equipment.

(b) Briefing and exercise:

The student Instructor has to:

1. present the type of sailplane which will be used;
2. explain the cockpit layout: instruments and equipment;
3. explain the flight controls: stick, pedals, airbrakes, flaps, cable release, undercarriage;
4. check the position of the student on the seat for comfort, visibility, ability to use all controls;
5. explain the use of the harness;
6. demonstrate how to adjust the rudder pedal;
7. explain the differences when occupying the instructor’s position;
8. explain all checklists, drills, controls.

EXERCISE 2: PROCEDURE IN THE EVENT OF EMERGENCIES

(a) Objective:

To advise the student instructor on how to familiarise the student with the use of the parachute and how to explain the bail out procedure in case of emergency.

(b) Briefing and exercise:

The student instructor has to:

1. explain how to handle the parachute with care (transport, storage and drying after use);
2. demonstrate the adjustment of the parachute harness;
3. explain the bail out procedure (especially from a sailplane in unusual attitude);
4. explain the procedure for landing with a parachute in normal conditions and with a strong wind.
EXERCISE 3: PREPARATION FOR FLIGHT

(a) Objective:

To advise the student instructor on how to explain all the operations to be completed prior to flight. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:

The student instructor has to explain:

1. the need for a pre-flight briefing;
2. the structure and the content of this briefing;
3. which documents are required on board;
4. which equipment are required for a flight;
5. how to handle the sailplane on the ground, how to move it, how to tow it out and how to park it;
6. how to do the pre-flight external and internal checks;
7. the procedure for verifying in-limits mass and balance;
8. the pre-launch checks (checklist).

(c) Air exercise:

The student instructor has to demonstrate:

1. the need for a pre-flight briefing;
2. that the required documents are on board;
3. that the equipment required for the intended flight is on board;
4. how to handle the sailplane on the ground, move it to the start position, tow it out and park it;
5. how to perform a pre-flight external and internal check;
6. how to verify in-limits mass and balance;
7. how to adjust harness as well as seat or rudder pedals;
8. the pre-launch checks;
9. how to advise the student pilot in performing the pre-flight preparation;
(10) how to analyse and correct pre-flight preparation errors as necessary.

**EXERCISE 4: INITIAL AIR EXPERIENCE**

(a) **Objective:**

To advise the student instructor on how to familiarise the student with being in the air, with the area around the airfield, to note his/her reactions in this situation, and to draw his/her attention to safety and look-out procedures.

(b) **Briefing:**

The student instructor has to explain:

(1) the area around the airfield;
(2) the need for looking out;
(3) the change of aircraft control.

(c) **Air exercise:**

The student instructor has to:

(1) show the noteworthy references on the ground;
(2) analyse the reactions of the student;
(3) check that the student looks out (safety).

**EXERCISE 5: PRIMARY EFFECTS OF CONTROLS**

(a) **Objective:**

To advise the student instructor on how to:

(1) demonstrate the primary effects of each control with the help of visual references;
(2) train the student pilot to recognise when the sailplane is no longer in a normal attitude along one of the axes and to return to the normal attitude;
(3) train continuous and efficient look-out during these exercises;
(4) analyse and correct errors and student pilot mistakes as necessary.

(b) **Briefing:**

The student instructor has to explain:

(1) define the axes of a sailplane;
(2) the look-out procedures;
(3) the visual references along each axis;
(4) the primary effects of controls when laterally level;
(5) the relationship between attitude and speed;
(6) the use of flaps;
(7) the use of airbrakes.

(c) Air exercise:
The student instructor has to demonstrate:
(1) the visual references in flight;
(2) the primary effect of the elevator;
(3) the relationship between attitude and speed (inertia);
(4) the primary effect of rudder on the rotation of the sailplane around the vertical axis;
(5) the primary effect of ailerons on banking;
(6) the effect of airbrakes (including changes in pitch when airbrakes are extended or retracted);
(7) the effects of flaps (provided the sailplane has flaps);
(8) the look-out procedures during all the exercises;
(9) how to advise the student pilot to recognise the primary effects of each control;
(10) how to analyse and correct errors as necessary.

**EXERCISE 6: CO-ORDINATED ROLLING TO AND FROM MODERATE ANGLES OF BANK**

(a) Objective:
To advise the student instructor on secondary effects of controls and on how to teach the student to coordinate ailerons and rudder in order to compensate for the adverse yaw effect. Furthermore the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:
The student instructor has to explain:
(1) the secondary effects of controls;
(2) the adverse yaw effect;
(3) how to compensate for the adverse yaw;
(4) the further effect of the rudder (roll).

(c) Air exercise:

The student instructor has to demonstrate:

(1) the adverse yaw effect with a reference on ground;
(2) the further effect of the rudder (roll);
(3) the coordination of rudder and aileron controls to compensate for the adverse yaw effects;
(4) rolling to and from moderate angles of bank (20 to 30 °) and returning to the straight flight;
(5) how to advise the student pilot to coordinate ailerons and rudder;
(6) how to analyse and correct errors as necessary.

**EXERCISE 7: STRAIGHT FLYING**

(a) Objective:

To advise the student instructor on how to train the student to maintain straight flight with a constant heading without slipping and skidding. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:

The student instructor has to:

(1) explain how to maintain straight flight;
(2) explain different air speed limitations;
(3) explain the pitch stability of the sailplane;
(4) explain the effect of trimming.

(c) Air exercise:

The instructor student has to demonstrate:

(1) maintaining straight flight;
(2) inherent pitch stability;
(3) the control of the sailplane in pitch, including use of trim with visual references and speed;

(4) how to perform the instrument monitoring;

(5) the control of level attitude with visual references;

(6) the control of the heading with a visual reference on the ground;

(7) the look-out procedures during all the exercises;

(8) how to advise the student pilot to maintain straight flight;

(9) how to analyse and correct errors as necessary.

**EXERCISE 8: TURNING**

(a) **Objective:**

To advise the student instructor on how to teach students to fly turns and circles with a moderate constant bank of about 30 ° with constant attitude (speed) and coordinated flight. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) **Briefing:**

The student instructor has to explain:

(1) the forces on the sailplane during a turn;

(2) the need to look out before turning;

(3) the sequences of a turn (entry, stabilizing and exiting);

(4) the common faults during a turn;

(5) how to turn on to selected headings, use of compass;

(6) the use of instruments (ball indicator or slip string) for precision.

(c) **Air exercise:**

The student instructor has to demonstrate:

(1) the look-out procedure before turning;

(2) entering a turn (correction of adverse yaw);

(3) the stabilisation of a turn (keeping the attitude and compensating the induced roll);

(4) the exit from a turn;
DEPARTMENT OF CIVIL AVIATION
MFCL ACCEPTABLE MEANS OF COMPLIANCE AND GUIDANCE MATERIAL

(5) the most common faults in a turn;
(6) turns on to selected headings (use landmarks as reference);
(7) use of instruments (ball indicator or slip string) for precision:
(8) how to advise the student pilot to fly a turn or circle with a moderate bank;
(9) how to analyse and correct errors as necessary.

EXERCISE 9a: SLOW FLIGHT

(a) Objective:

To advise the student instructor on how to improve the student’s ability to recognise inadvertent flight at critically low speeds (high angle of attack) and to provide practice in maintaining the sailplane in balance while returning to normal attitude (speed). Furthermore the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:

The student instructor has to explain:
(1) the characteristics of slow flight;
(2) the risks of stalling.

(c) Air Exercise:

The student instructor has to check that the airspace below the sailplane is free of other aircraft before starting the exercise.

The student instructor has to demonstrate:

EXERCISE 9b: STALLING

(a) Objective:

To advise the student Instructor on how to improve the student’s ability to recognize a stall and to recover from it. This includes stall from a level flight and stalls when a wing drops. Furthermore the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:

The student instructor has to explain:
(1) the mechanism of a stall;
(2) the effectiveness of the controls at the stall;
(3) pre-stall symptoms, recognition and recovery;

(4) factors affecting the stall (importance of the angle of attack and high speed stall);

(5) effect of flaps if any on the sailplane;

(6) the effects of unbalance at the stall safety checks;

(7) stall symptoms, recognition and recovery;

(8) recovery when a wing drops;

(9) approach to stall in the approach and in the landing configurations: recognition and recovery from accelerated stalls.

c) Air Exercise:

The student instructor has to check that the airspace below the sailplane is free of other aircraft or traffic before starting the exercise.

The student instructor has to demonstrate:

(1) stall from a level flight;

(2) pre-stall symptoms, recognition and recovery;

(3) stall symptoms, recognition and recovery;

(4) recovery when a wing drops;

(5) approach to stall in the approach and in the landing configurations;

(6) recognition and recovery from accelerated stalls;

(7) stalling and recovery at the incipient stage with ‘instructor induced’ distractions;

(8) how to improve the student pilot’s ability to recognise a stall and to recover from it;

(9) how to analyse and correct errors as necessary.

Note: consideration is to be given to manoeuvre limitations and references to the flight manual or equivalent document (for example owner’s manual or pilot’s operating handbook) in relation to mass and balance limitations. The safety checks should take into account the minimum safe altitude for initiating such exercises in order to ensure an adequate margin of safety for the recovery. If specific procedures for stalling or spinning exercises and for the recovery techniques are provided by the flight manual or equivalent document (for example owner’s manual or pilot’s operating handbook), they have to be taken into consideration. These factors are also covered in the next exercise.
EXERCISE 10a: SPIN RECOGNITION AND AVOIDANCE

(a) Objective:

To advise the student Instructor on how to improve the student’s ability to recognize a spin at the incipient stage and to recover from it. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:

The student instructor has to explain:

1. why a sailplane spins;
2. how to recognise the symptoms of a spin (not to be confused with spiral dive);
3. what are the parameters influencing the spin;
4. how to recover from a spin.

(c) Air exercise:

The student instructor has to check that the airspace below the sailplane is free of other aircraft or traffic before starting the exercise.

The student instructor has to:

1. demonstrate stalling and recovery at the incipient spin stage (stall with excessive wing drop, about 45°);
2. make sure that the student recognises the spin entry;
3. make sure that the student pilot is able to recover from the spin;
4. check if the student still reacts properly if the instructor induces distractions during the spin entry;
5. demonstrate how to analyse and correct errors as necessary.

Note: consideration of manoeuvre limitations and the need to refer to the sailplane manual and mass and balance calculations.

EXERCISE 10b: DEVELOPED SPINS: ENTRY AND RECOVERY

(a) Objective:

To advise the student instructor on how to recognize a developed spin and to recover from it. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:
The student instructor has to explain:

(1) the spin entry;
(2) the symptoms of a real spin and the recognition and identification of spin direction;
(3) the spin recovery;
(4) use of controls;
(5) effects of flaps (flap restriction applicable to type);
(6) the effect of the CG upon spinning characteristics;
(7) the spinning from various flight attitudes;
(8) the sailplane limitations;
(9) safety checks;
(10) common errors during recovery.

(c) Air exercise:

The student instructor has to check that the airspace below the sailplane is free of other aircraft or traffic before starting the exercise.

The student instructor has to demonstrate:

(1) safety checks;
(2) the spin entry;
(3) the recognition and identification of the spin direction;
(4) the spin recovery (reference to flight manual);
(5) the use of controls;
(6) the effects of flaps (restrictions applicable to sailplane type);
(7) spinning and recovery from various flight attitudes;
(8) how to improve the student pilot’s ability to recognise a spin and how to recover from it;
(9) how to analyse and correct errors as necessary.

**EXERCISE 11: TAKE OFF OR LAUNCH METHODS**

Note: the student instructor has to teach at least one of the following launch methods: winch launch, aero tow, self-launch. At least three launch failure exercises
should be completed. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

**EXERCISE 11a: WINCH LAUNCH**

(a) **Objective:**

To advise the student instructor on how to teach winch launches and on how to make sure that their student will manage an aborted launch. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) **Briefing:**

The student instructor has to explain:

1. the signals or communication before and during launch;
2. the use of the launching equipment;
3. the pre-take-off checks;
4. the procedure for into wind take-off;
5. the procedure for crosswind take-off;
6. the optimum profile of winch launch and limitations;
7. the launch failure procedures.

(c) **Air exercise:**

The student instructor has to demonstrate:

1. the use of the launching equipment;
2. the pre-take-off checks;
3. the into wind take-off;
4. the crosswind take-off;
5. the optimum profile of winch launch and limitations;
6. the procedure in case of cable break or aborted launch, launch failure procedures;
7. how to teach the student pilot to perform safe winch launches;
8. how to teach the student pilot to manage an aborted launch (different altitudes);
9. how to analyse and correct errors as necessary.
EXERCISE 11b: AERO TOW

(a) Objective:

To advise the student instructor on how to teach aero towing and on how to make sure that their student will manage an aborted launch. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:

The student instructor has to explain:

1. the signals or communication before and during launch;
2. the use of the launch equipment;
3. the pre-take-off checks;
4. the procedure for into wind take-off;
5. the procedure for crosswind take-off;
6. the procedure on tow: straight flight, turning and slip stream;
7. the recovery from out-of-position on tow;
8. the procedures in case of launch failure and abandonment;
9. the descending procedure on tow (towing aircraft and sailplane);
10. the reasons for launch failures and abandonment or procedures.

(c) Air exercise:

The student instructor has to demonstrate:

1. the signals before and during launch;
2. the use of the launch equipment;
3. the pre-take-off checks;
4. the procedure for into wind take-off;
5. the procedure for a crosswind take-off;
6. the procedures on tow: straight flight, turning and slip stream;
7. the recovery from out-of-position on tow;
8. the procedure in case of launch failure and abandonment;
(9) the descending procedure on tow;

(10) how to teach the student pilot to perform safe aero tow launches;

(11) how to teach the student pilot to manage an aborted launch;

(12) how to analyse and correct errors as necessary.

**EXERCISE 11c: SELF LAUNCH**

(a) **Objective:**

To advise the student instructor on how to teach launching with a self-launching sailplane and on how to make sure that his/her student will manage an aborted launch. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) **Briefing:**

The student instructor has to explain:

(1) the engine extending and retraction procedures;

(2) the engine starting and safety precautions;

(3) the pre-take-off checks;

(4) the noise abatement procedures;

(5) the checks during and after take-off;

(6) the into wind take-off;

(7) the crosswind take-off;

(8) the procedure in case of power failure;

(9) the procedure in case of abandoned take-off;

(10) the maximum performance (short field and obstacle clearance) take-off;

(11) the short take-off and soft field procedure or techniques and performance calculations.

(c) **Air exercise:**

The student instructor has to demonstrate:

(1) the engine extending and retraction procedures;

(2) the engine starting and safety precautions;
(3) the pre-take-off checks;
(4) the noise abatement procedures;
(5) the checks during and after take-off;
(6) the into wind take-off;
(7) the crosswind take-off;
(8) the power failures and procedures;
(9) the procedure in case of abandoned take-off;
(10) the maximum performance (short field and obstacle clearance) take-off;
(11) the short take-off and soft field procedure or techniques and performance calculations;
(12) how to teach the student pilot to perform safe self-launches;
(13) how to teach the student pilot to manage an aborted launch (different altitudes);
(14) how to analyse and correct errors as necessary.

**EXERCISE 12: CIRCUIT APPROACH AND LANDING**

(a) **Objective:**

To advise the student instructor on how to teach their students to fly a safe circuit approach and to land the sailplane. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) **Briefing:**

The student instructor has to explain:

(1) the procedures for rejoining the circuit;
(2) the procedures for collision avoidance and the lookout techniques;
(3) the pre-landing check;
(4) the normal circuit procedures, downwind, base leg;
(5) the effect of wind on approach and touchdown speeds;
(6) the visualisation of a reference point;
(7) the approach control and use of airbrakes;
(8) the use of flaps (if applicable);
(9) the procedures for normal and crosswind approach and landing.

(c) Air exercise:
The student instructor has to demonstrate:
(1) the procedures for rejoining the circuit;
(2) the procedures for collision avoidance and the look-out techniques;
(3) the pre-landing check;
(4) the standard circuit and contingency planning (for example running out of height);
(5) the effect of wind on approach and touchdown speeds;
(6) the visualisation of an aiming point;
(7) the approach control and use of airbrakes;
(8) the use of flaps (if applicable);
(9) the procedures for normal and crosswind approaches and landings;
(10) how to teach the student pilot to fly a safe circuit approach;
(11) how to improve the student pilot's ability to perform a safe landing;
(12) how to analyse and correct errors as necessary.

**EXERCISE 13: FIRST SOLO**

(a) Objective:
To advise the student instructor on how to prepare their students for the first solo flight.

(b) Briefing:
The student instructor has to explain:
(1) the limitations of the flight (awareness of local area and restrictions);
(2) the use of required equipment.

(c) Air exercise:
The student instructor has to;
(1) check with another or more senior instructor if the student can fly solo;
(2) monitor the flight;

(3) debrief the flight with the student.

**EXERCISE 14: ADVANCED TURNING**

(a) **Objective:**

To advise the student instructor on how to fly steep turns or circles (45° banking) at constant attitude (speed) and with the yaw string centred. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) **Briefing:**

The student instructor has to explain;

(1) the relationship between banking and speed;

(2) how to master steep turns or circles;

(3) the unusual attitudes which can occur (stalling or spinning and spiral dive);

(4) how to recover from these unusual attitudes.

(c) **Air exercise:**

The student has to demonstrate:

(1) steep turns (45°) at constant speed and with the yaw string centred;

(2) common errors (slipping and skidding);

(3) unusual attitudes and how to recover from them;

(4) how to teach the student pilot to fly steep turns or circles;

(5) how to analyse and correct errors as necessary.

**EXERCISE 15: SOARING TECHNIQUES**

Note: if the weather conditions during the instructor training do not allow the practical training of soaring techniques, all items of the air exercises have to be discussed and explained during a long briefing exercise only.

**EXERCISE 15a: THERMALLING**

(a) **Objective:**

To advise the student instructor on how to teach their students to recognise and detect thermals, on how to join a thermal and on how to look out, in order to
avoid mid-air collisions. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:

The student instructor has to explain;

(1) the look-out procedures;
(2) the detection and recognition of thermals;
(3) the use of audio soaring instruments;
(4) the procedure for joining a thermal and giving way;
(5) how to fly in close proximity to other sailplanes;
(6) how to centre in thermals;
(7) how to leave thermals.

(c) Air exercise:

The student instructor has to demonstrate;

(1) the look-out procedures;
(2) the detection and recognition of thermals;
(3) the use of audio soaring instruments;
(4) the procedure for joining a thermal and giving way;
(5) the procedure for flying in close proximity to other sailplanes;
(6) the centering in thermals;
(7) the procedure for leaving thermals;
(8) how to improve the student pilot’s ability to recognise and detect thermals;
(9) how to improve the student pilot’s ability to join a thermal and how to look out;
(10) how to analyse and correct errors as necessary.

**EXERCISE 15b: RIDGE FLYING**

(a) Objective:

To advise the student instructor on how to teach his/her students to fly safely on ridges, to control their speed, and to apply the rules in order to
avoid mid-air collisions. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:

The student instructor has to explain:

(1) the look-out procedures;
(2) the ridge flying rules;
(3) the recognition of optimum flight path;
(4) speed control.

(c) Air exercise: (if applicable during training and, if possible, at training site) The student instructor has to demonstrate:

(1) the look-out procedures;
(2) the practical application of ridge flying rules;
(3) the recognition of optimum flight path;
(4) speed control;
(5) how to teach the student pilot to fly safely on ridges;
(6) how to analyse and correct errors as necessary.

**EXERCISE 15c: WAVE FLYING**

(a) Objective:

To advise the student instructor on how to introduce students to wave flying and to teach them to fly safely at high altitude. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:

The student instructor has to explain:

(1) the look-out procedures;
(2) the techniques to be used to accede to a wave;
(3) the speed limitations with increasing height;
(4) the risks of hypoxia and the use of oxygen.

(c) Air exercise: (if applicable during training and if possible at training site) The
student instructor has to demonstrate:

(1) the look-out procedures;
(2) the wave access techniques;
(3) the speed limitations with increasing height;
(4) the use of oxygen (if available);
(5) how to improve the student pilot’s ability to recognise and detect waves;
(6) how to teach the student pilot to fly safely in a wave;
(7) how to analyse and correct errors as necessary.

**EXERCISE 16: OUT-LANDINGS**

Note: if the weather conditions during the instructor training do not allow the practical training of out-landing procedures (a touring motor glider may be used) all items of the air exercise have to be discussed and explained during a long briefing exercise only. Instructors may only teach the safe out-landing exercise after they have demonstrated the practical ability to do so.

(a) Objective:

To advise the student instructor on how to teach students to select an out-landing field, to fly the circuit and how to master the unusual landing situation. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:

The student instructor has to explain:

(1) the gliding range at max L/D;
(2) the engine re-start procedures (only for self-launching and self-sustaining sailplanes);
(3) the selection of a landing area;
(4) the circuit judgement and key positions;
(5) the circuit and approach procedures;
(6) the actions to be done after landing.

(c) Air exercise:

The student instructor has to demonstrate:
(1) precision landings on the airfield;
(2) the gliding range;
(3) the procedures for joining, arrival and circuit at a remote aerodrome;
(4) the selection of an out-landing area;
(5) the procedures for circuit and approach on an out-landing field;
(6) the actions to be done after landing; The student instructor also has to be trained:
(7) how to advise the student pilot to do perform a safe out-landing;
(8) how to master an unusual landing situation;
(9) how to analyse and correct errors as necessary.

EXERCISE 17: CROSS COUNTRY FLYING

Note: if the weather conditions during the instructor training do not allow a cross country training flight the items of the air exercise have to be discussed and explained during a long briefing exercise only.

EXERCISE 17a: FLIGHT PLANNING

(a) Objective:
To advise the student instructor on how plan and prepare a cross-country flight.

(b) Briefing:
The student instructor has to explain:

(1) the weather forecast and current situation;
(2) the selection of the amount of water to be carried as a function of the weather forecast;
(3) the method for selecting a task, taking into account the average speed to be expected;
(4) the map selection and preparation;
(5) the NOTAMs and airspace considerations;
(6) the radio frequencies (if applicable);
(7) the pre-flight administrative procedures;
(8) the procedure for filing a flight plan where required;

(9) alternate aerodromes and landing areas.

**EXERCISE 17b: IN-FLIGHT NAVIGATION**

(a) **Objective:**

To advise the student instructor on how to teach performing a cross-country flight.

(b) **Briefing:**

The student instructor has to explain:

1. how to maintain track and re-route if necessary;
2. the altimeter settings;
3. the use of radio and phraseology;
4. the in-flight planning;
5. the procedures for transiting regulated airspace or ATC liaison where required;
6. the procedure in case of uncertainty of position;
7. the procedure in case of becoming lost;

(c) **Air exercise:**

The student instructor has to demonstrate:

1. maintaining track and re-routing if necessary;
2. altimeter settings;
3. the use of radio and phraseology;
4. in-flight planning;
5. procedures for transiting regulated airspace or ATC liaison where required;
6. uncertainty of position procedure;
7. lost procedure;
8. use of additional equipment where required;
9. joining, arrival and circuit procedures at remote aerodrome;
(10) how to teach the student pilot to perform a cross-country flight;

(11) how to analyse and correct errors as necessary.

**EXERCISE 17c: CROSS-COUNTRY SOARING TECHNIQUES**

(a) **Objective:**

To advise the student instructor on the techniques for an efficient cross country flight.

(b) **Briefing:**

The student instructor has to explain:

(1) the speed to fly at maximal L/D ratio;
(2) the speed to fly to maximise the cruise speed (Mc Cready theory);
(3) how to select the optimal track (efficient use of cloud streets etc.);
(4) how to calculate the final glide;
(5) how to perform a safe out-landing.

(c) **Air exercise:**

The student instructor has to demonstrate:

(1) a cross-country flight;
(2) the selection of the optimal track (efficient use of cloud streets, etc.);
(3) the use of the Mc Cready ring;
(4) use of final glide computers;
(5) how to reduce risk and to react to potential dangers;
(6) how to plan and perform an out-landing;
(7) how to teach the student pilot techniques for an efficient cross-country flight;
(8) how to analyse and correct errors as necessary.

**B. BALLOONS**

**LONG BRIEFINGS AND AIR EXERCISES**

**EXERCISE 1: FAMILIARISATION WITH THE BALLOON**

(a) **Objective:**
To advise the student Instructor on how to familiarise the student with the balloon which will be used for the training and to test his position in the basket for comfort, visibility, and ability to use all controls and equipment. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing and exercise:

The student instructor has to:

(1) present the type of balloon which will be used;
(2) explain the characteristics of the balloon;
(3) explain the components, instruments and equipment;
(4) explain the re-fueling procedures (in the case of hot air balloons);
(5) to familiarise the student with the balloon controls;
(6) explain the differences when occupying the instructor’s position;
(7) explain all checklists, drills and controls.

**EXERCISE 2: PREPARATION FOR FLIGHT**

(a) Objective:

To advise the student instructor on how to explain all the operations and necessary preparation to be completed before the flight. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing

The student instructor has to explain:

(1) the need for a pre-flight briefing;
(2) the structure and the content of this briefing;
(3) which documents are required on board;
(4) which equipment are required for a flight;
(5) the use of weather forecasts or actuals;
(6) the flight planning with particular regard to NOTAMs, airspace structure, sensitive areas, expected track and distance, pre-flight picture and possible landing fields;
(7) the use of load calculation chart;
(8) the selection of launch field with particular regard to permission, behaviour and adjacent fields.

(c) Air exercise:

The student instructor has to prepare and give a pre-flight briefing. The student instructor has to demonstrate:

(1) that the required documents are on board;
(2) that the equipment required for the intended flight is on board;
(3) how to advice the student to do the pre-planning procedures for each flight;
(4) how to perform a pre-launch check;
(5) how to select a launch field with particular regard to permission, behaviour and adjacent fields;
(6) how to teach the student pilot to perform the preparation to be completed prior to flight;
(7) how to analyse and correct errors of the student pilot as necessary.

**EXERCISE 3: CREW AND PASSENGER BRIEFING**

(a) Objective:

To advise the student instructor on how to explain all the importance of correct clothing for pilot, passengers and crew and how to perform the briefing of ground- and retrieve crew and the briefing of passengers. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:

The student instructor has to explain:

(1) the correct clothing for passengers and crew;
(2) the briefings for ground- and retrieve crew and passengers.

(c) Air exercise:

The student instructor has to demonstrate:

(1) how to advise the passengers and crew about the correct clothing;
(2) the briefing of ground- and retrieve crew;
(3) the briefing of passengers;
(4) how to familiarise the student pilot with the different type of briefings;

(5) how to analyse and correct errors of the student pilot.

**EXERCISE 4: ASSEMBLY AND LAYOUT**

(a) **Objective:**

To advise the student instructor on how to familiarise the student pilot with the control of the crowd and how to perform the securing of launch site. Furthermore the student instructor has to demonstrate how to familiarise the student pilot with the correct rigging of envelope and basket, the burner test procedure (hot air balloons) and the pre-inflation checks. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) **Briefing:**

The student instructor has to explain:

(1) the control of the crowd;

(2) the securing of the launch site;

(3) the correct rigging procedure;

(4) the use of the restraint line;

(5) the pre-inflation checks.

(c) **Air exercise:**

The student instructor has to demonstrate:

(1) how to control the crowd and securing of launch site;

(2) the correct rigging of envelope and basket;

(3) the correct use of the restraint line;

(4) the burner test procedure (hot air balloons);

(5) the pre-inflation checks;

(6) how to teach the student pilot to perform the correct rigging;

(7) how to analyse and correct assembly errors of the student pilot as necessary.

**EXERCISE 5: INFLATION**

(a) **Objective:**
To advise the student instructor on how to familiarise the student pilot with the different phases of the inflation procedure, the use of restraint line and inflation fan (hot air balloons) and the avoidance of electrostatic discharge (gas balloons). Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:

The student instructor has to explain:

1. the different phases of the inflation procedure;
2. the crowd control and securing procedures during inflation;
3. the use of the inflation fan (hot air balloons);
4. how to avoid electronic discharge (gas balloons).

(c) Air exercise:

The student instructor has to demonstrate:

1. how to control of crowd and securing of launch site during inflation procedure;
2. the cold inflation procedure and use of restraint line and inflation fan (hot air balloons);
3. the hot inflation procedure (hot air balloons);
4. the avoidance of electrostatic discharge (gas balloons);
5. the inflation procedure (gas balloons);
6. how to teach the student pilot to perform the inflation procedures;
7. how to analyse and correct errors of the student pilot during the inflation procedure as necessary.

**EXERCISE 6: TAKE OFF IN DIFFERENT WIND CONDITIONS**

(a) Objective:

To advise the student instructor how to explain the pre take-off checks and briefings, the preparation for controlled climb and the use of restraint equipment. Furthermore the student instructor should be able to demonstrate the assessment of wind and obstacles, the preparation for false lift and the take-off techniques in different wind conditions. In addition to this the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:

The student instructor has to explain:
(1) the pre take-off checks and briefings;
(2) the preparation for controlled climb;
(3) the ‘hands off and hands on’ procedure for ground crew;
(4) the assessment of lift;
(5) the use of the restraint equipment;
(6) the assessment of wind and obstacles;
(7) the preparation for false lift;
(8) the take-off techniques from sheltered and non-sheltered launch fields.

(c) Air exercise:

The student instructor has to demonstrate:

(1) how to perform the pre take-off checks and briefings;
(2) how to prepare for controlled climb;
(3) how to perform the ‘hands off and hands on’ procedure for ground crew;
(4) how to perform the assessment of lift without endangering the ground crew;
(5) how to use the restraint equipment;
(6) how to perform the assessment of wind and obstacles;
(7) how to prepare for false lift;
(8) how to teach the student pilot the correct take-off techniques from sheltered and non-sheltered launch fields;
(9) how to analyse and correct errors of the student pilot as necessary.

**EXERCISE 7: CLIMB TO LEVEL FLIGHT**

(a) Objective:

To advise the student instructor on how to explain and demonstrate the climb to flight level. Furthermore the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:
The student instructor has to explain:

1. the climbing with a predetermined rate of climb;
2. the effect on envelope temperature (hot air balloons);
3. the maximum rate of climb according to manufacturer’s flight manual;
4. how to level off at selected altitude.

(c) Air exercise:

The student instructor has to demonstrate:

1. how to climb with a predetermined rate of climb;
2. how to perform look out techniques;
3. the effect on envelope temperature (hot air balloons);
4. the maximum rate of climb according to manufacturer’s flight manual;
5. the levelling off techniques at selected altitude;
6. how to advise the student pilot to perform the climb to level flight;
7. how to analyse and correct faults or errors of the student pilot during the climb.

**EXERCISE 8: LEVEL FLIGHT**

(a) Objective:

To advise the student instructor on how to explain and demonstrate level flight. Furthermore the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:

The student instructor has to explain:

1. how to maintain level flight by use of instruments;
2. how to maintain level flight by use of visual references;
3. how to maintain level flight by use of all available means;
4. the use of parachute;
5. the use of turning vents if installed (hot air balloons).

(c) Air exercise:
The student instructor has to demonstrate:

(1) how to maintain level flight by use of instruments;
(2) how to maintain level flight by use of visual references;
(3) how to maintain level flight by use of all available means;
(4) the use of parachute;
(5) the use of turning vents if installed (hot air balloons);
(6) how to advise the student pilot to perform the level flight;
(7) how to analyse and correct faults or errors of the student pilot during the level flight.

**EXERCISE 9: DESCENT TO LEVEL FLIGHT**

(a) **Objective:**

To advise the student instructor on how to explain and demonstrate the descent to a certain flight level. Furthermore the student instructor should learn how to identify student errors and how to correct them properly.

(b) **Briefing:**

The student instructor has to explain:

(1) how to descend with a predetermined rate of descent;
(2) a fast descent;
(3) the maximum rate of descent according to manufacturer’s flight manual;
(4) the use of parachute;
(5) a parachute stall and cold descent (hot air balloons);
(6) the levelling off technique at selected altitude.

(c) **Air exercise:**

The student instructor has to demonstrate:

(1) a descent with a predetermined rate of descent;
(2) how to perform look out techniques;
(3) a fast descent;
(4) the maximum rate of descent according to manufacturer’s flight manual;
(5) the use of parachute;
(6) how to level off at selected altitudes;
(7) how to advise the student pilot to perform a descent to a certain flight level;
(8) how to analyse and correct faults or errors of the student pilot during the descent.

**EXERCISE 10: EMERGENCIES**

(a) **Objective:**

To advise the student instructor on how to explain and demonstrate the different emergency situations and how to react. Furthermore the student instructor should learn how to identify student errors during the simulated emergency exercises and how to correct them properly.

(b) **Briefing:**

The student instructor has to explain:

(1) the pilot light failure (hot air balloons);
(2) burner failures, valve leaks, flame out and re-light (hot air balloons);
(3) gas leaks;
(4) closed appendix during take-off and climb (gas balloons);
(5) the envelope over temperature (hot air balloons);
(6) envelope damage in flight;
(7) the parachute or rapid deflation system failure;
(8) fire on ground and in the air;
(9) how to avoid an obstacle contact including contact with electrical power lines;
(10) escape drills, location and use of emergency equipment.

(c) **Air exercise:**

The student instructor has to demonstrate:

(1) a pilot light failure (hot air balloons);
(2) a burner failure, valve leaks, flame out and re-light (hot air balloons);
(3) gas leaks;

(4) a closed appendix during take-off and climb (gas balloons);

(5) envelope over temperature (hot air balloons);

(6) envelope damage in flight;

(7) parachute or rapid deflation system failure;

(8) a fire on ground and in the air;

(9) the escape drills, location and use of emergency equipment;

(10) how to advise the student pilot in performing the different emergency drills;

(11) how to analyse and correct faults or errors of the student pilot.

**EXERCISE 11: NAVIGATION**

(a) Objective:

To advise the student instructor on how to explain and demonstrate the advanced navigational flight preparation. Furthermore the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:

The student instructor has to explain:

(1) the maps selection;

(2) the plotting of the expected track;

(3) the marking of positions and time;

(4) the calculation of distance and speed;

(5) the calculation of fuel consumption (hot air balloons);

(6) the calculation of ballast consumption (gas balloons);

(7) the ceiling limitations (ATC or weather);

(8) how to plan ahead;

(9) the monitoring of weather development;

(10) the monitoring of fuel or ballast consumption;

(11) ATC liaison (if applicable);
(12) the communication with retrieve crew;
(13) the use of GNSS.

(c) Air exercise:

The student instructor has to demonstrate:

(1) the use of selected maps;
(2) the plotting of the expected track;
(3) the marking of positions and time;
(4) how to monitor of distance and speed;
(5) how to monitor the fuel or ballast consumption;
(6) the observance of ceiling limitations (ATC or weather);
(7) the planning ahead;
(8) the monitoring of weather development;
(9) the monitoring of envelope temperature (hot air balloons);
(10) ATC liaison (if applicable);
(11) communication with retrieve crew;
(12) use of GNSS;
(13) how to advise the student pilot in performing the navigational preparation;
(14) how to advise the student pilot in performing the different navigational in-flight tasks;
(15) how to analyse and correct faults or errors of the student pilot.

**EXERCISE 12a: FUEL MANAGEMENT HOT AIR BALLOONS**

(a) Objective:

To advise the student instructor on how to explain and demonstrate the fuel management techniques. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:

The student instructor has to explain:
(1) the cylinder arrangement and the burner systems;
(2) the function of the pilot light supply (vapour or liquid);
(3) the use of master cylinders (if applicable);
(4) the fuel requirement and expected fuel consumption;
(5) the fuel state and pressure;
(6) the minimum fuel reserves;
(7) cylinder contents gauge and change procedure;
(8) the use of cylinder manifolds.

(c) Air exercise:
The student instructor has to demonstrate:
(1) the cylinder arrangement and burner systems;
(2) the pilot light supply (vapour or liquid);
(3) the use of master cylinders (if applicable);
(4) how to monitor of fuel requirement and expected fuel consumption;
(5) the monitoring of fuel state and pressure;
(6) the monitoring of fuel reserves;
(7) the use of cylinder contents gauge and change procedure;
(8) the use of cylinder manifolds;
(9) how to advise the student pilot to perform the fuel management;
(10) how to analyse and correct faults or errors of the student pilot.

**EXERCISE 12b: BALLAST MANAGEMENT GAS BALLOONS**

(a) Objective:

To advise the student instructor on how to explain and demonstrate the ballast management. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:

The student instructor has to explain:

(1) the minimum ballast;
(2) the arrangement and securing of ballast;
(3) the ballast requirement and expected ballast consumption;
(4) the ballast reserves.

(c) Air exercise:

The student instructor also has to demonstrate:

(1) the arrangement of minimum ballast;
(2) the arrangement and securing of ballast;
(3) the ballast requirement calculation and expected ballast consumption;
(4) how to secure ballast reserves;
(5) how to advise the student pilot to perform the ballast management;
(6) how to analyse and correct faults or errors of the student pilot.

**EXERCISE 13: APPROACH FROM LOW LEVEL**

(a) Objective:

To advise the student instructor on how to explain and demonstrate the approach from level. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:

The student instructor has to explain:

(1) the pre landing checks;
(2) passenger pre-landing briefing;
(3) the selection of field;
(4) the use of burner and parachute (hot air balloons);
(5) the use of ballast or parachute and valve (gas balloons);
(6) the use of trail rope (if applicable) (gas balloons);
(7) the look-out;
(8) missed approach and fly on procedures.

(c) Air exercise:
The student instructor has to demonstrate:

1. the use of the pre landing checks;
2. the selection of fields;
3. the use of burner and parachute (hot air balloons);
4. the use of ballast or parachute and valve (gas balloons);
5. the use of trail rope (if applicable) (gas balloons);
6. the lookout procedures and how to avoid possible distractions;
7. the missed approach and fly on techniques;
8. how to advise the student pilot to perform an approach from low level;
9. how to analyse and correct faults or errors of the student pilot.

**EXERCISE 14: APPROACH FROM HIGH LEVEL**

(a) **Objective:**

To advise the student instructor on how to explain and demonstrate the approach from high level. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) **Briefing:**

The student instructor has to explain:

1. the pre-landing checks;
2. passenger pre-landing briefing;
3. the selection of field;
4. the rate of descent;
5. the use of burner and parachute (hot air balloons);
6. the use of ballast and parachute (gas balloons);
7. the use of trail rope (if applicable) (gas balloons);
8. the look-out;
9. the missed approach and fly on procedures.

(c) **Air exercise:**

The student instructor has to demonstrate:
(1) the pre-landing checks;
(2) the selection of field;
(3) the rate of descent;
(4) the use of burner and parachute (hot air balloons);
(5) the use of ballast and parachute (gas balloons);
(6) the use of trail rope (if applicable) (gas balloons);
(7) the lookout procedures and how to avoid potential distraction;
(8) the missed approach and fly on techniques;
(9) how to advise the student pilot to perform an approach from a higher level;
(10) how to analyse and correct faults or errors of the student pilot.

**EXERCISE 15: OPERATING AT LOW LEVEL**

(a) **Objective:**

To advise the student instructor on how to explain and demonstrate the operation at a low height. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) **Briefing:**

The student instructor has to explain:

(1) the use of burner and parachute (hot air balloons);
(2) the use of ballast and parachute (gas balloons);
(3) the look out;
(4) how to avoid a contact with low level obstacles;
(5) how to avoid sensitive areas (for example nature protection areas);
(6) landowner relations.

(c) **Air exercise:**

The student instructor has to demonstrate:

(1) the use of burner and parachute (hot air balloons);
(2) the use of ballast and parachute (gas balloons);
(3) the lookout procedures and how to avoid potential distraction;
(4) how to avoid low level obstacles;
(5) good landowner relations;
(6) how to advise the student pilot to operate the balloon at a low level;
(7) how to analyse and correct faults or errors of the student pilot.

EXERCISE 16: LANDING IN DIFFERENT WIND CONDITIONS

(a) Objective:
To advise the student instructor on how to explain and demonstrate landings in different wind conditions. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:
The student instructor has to explain:
(1) the correct actions for turbulences during the approach or landing;
(2) the passenger pre-landing briefing;
(3) the use of burner and pilot lights (hot air balloons);
(4) the use of ballast, parachute, valve and rip panel (gas balloons);
(5) the use of parachute and turning vents (if applicable);
(6) the look out;
(7) the landing, dragging and deflation;
(8) landowner relations.

(c) Air exercise:
The student instructor has to demonstrate:
(1) the pre-landing checks;
(2) the passenger briefing;
(3) the selection of field;
(4) the effect of turbulence;
(5) the use of burner and pilot lights (hot air balloons);
(6) the use of ballast, parachute, valve and rip panel (gas balloons);

(7) the use of parachute and turning vents (if applicable);

(8) the lookout procedures and how to avoid potential distraction;

(9) the landing, dragging and deflation procedures;

(11) how to advise the student pilot to perform a safe landing in different wind conditions;

(12) how to analyse and correct faults or errors of the student pilot.

**EXERCISE 17: FIRST SOLO**

(a) **Objective:**

To advise the student instructor on how to prepare their students for the first solo flight.

(b) **Briefing:**

The student instructor has to explain:

(1) the limitations of the flight;

(2) the use of required equipment.

(c) **Air exercise:**

The student instructor has to:

(1) check with another or more senior instructor if the student can fly solo;

(2) monitor the pre-flight preparation;

(3) brief the student (expected flight time or emergency actions);

(4) monitor the flight as far as possible;

(5) debrief the flight with the student.

**EXERCISE 18: TETHERED FLIGHT HOT AIR BALLOONS (if tethered flight instructional qualification is required)**

(a) **Objective:**

To advise the student instructor on how to explain and demonstrate the tethering techniques. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) **Briefing:**
The student instructor has to explain:

(1) the ground preparations;
(2) the weather suitability;
(3) the tethering techniques and equipment;
(4) the maximum all-up-weight limitation;
(5) the crowd control;
(6) the pre take-off checks and briefings;
(7) the heating for controlled lift off;
(8) the ‘hands off and hands on’ procedure for ground crew;
(9) the assessment of wind and obstacles;
(10) the controlled climb to a pre-defined altitude (at least 60 ft.).

(c) Air exercise:

The student instructor has to demonstrate:

(1) the ground preparations;
(2) the tethering techniques;
(3) the reason for maximum all-up-weight limitation;
(4) how to perform the crowd control;
(5) the pre take-off checks and briefings;
(6) the heating for controlled lift off;
(7) the ‘hands off and hands on’ procedure for ground crew;
(8) the assessment of wind and obstacles;
(9) the controlled climb;
(10) the landing techniques;
(11) how to advise the student pilot to perform a tethered flight;
(12) how to analyse and correct faults or errors of the student pilot.

**EXERCISE 19: NIGHT FLYING (if night instructional qualification required)**

(a) **Objective:**
To advise the student instructor on how to explain and demonstrate the night flying techniques. Furthermore, the student instructor should learn how to identify student errors and how to correct them properly.

(b) Briefing:

The student instructor has to explain:

1. the medical or physiological aspects of night vision;
2. the use of lights for assembly, layout and inflation;
3. the requirement for torch to be carried, (pre-flight inspection, etc.);
4. the use of the external- and instrument lights;
5. the night take-off procedure;
6. the checklist procedures at night;
7. the emergency procedures at night;
8. the navigation principles at night;
9. map marking for night use (highlighting built up or lit areas with thicker lines, etc.).

(c) Air exercise:

The student instructor has to demonstrate:

1. the use of lights for assembly, layout and inflation;
2. the use of torch for pre-flight inspection;
3. the use of external- and instrument lights;
4. the night take-off procedure;
5. how to perform the checklist procedures at night;
6. simulated night emergency procedures;
7. night cross country techniques, as appropriate;
8. how to advise the student pilot to perform a flight at night;
9. how to analyse and correct faults or errors of the student pilot.

**AMC1 MFCL.940.FI (a) (2) — Revalidation and renewal**

FI OR IRI REFRESHER SEMINAR
(a) FI or IRI refresher seminars made available in Member States should have due regard to geographical location, numbers attending, and periodicity throughout the territory of the Member State concerned.

(b) Such seminars should run for at least 2 days, and attendance from participants will be required for the whole duration of the seminar including breakout groups and workshops. Different aspects, such as inclusion of participants holding certificates in other categories of aircraft should be considered.

(c) Some experienced FIs or IRIs currently involved with flying training and with a practical understanding of the revalidation requirements and current instructional techniques should be included as speakers at these seminars.

(d) The attendance form will be completed and signed by the organiser of the seminar as approved by the Authority, following attendance and satisfactory participation by the FI or IRI.

(e) The content of the FI or IRI refresher seminar should be selected from the following:

   (1) new or current rules or regulations, with emphasis on knowledge of Part-MFCL and operational requirements;
   (2) teaching and learning;
   (3) instructional techniques;
   (4) the role of the instructor;
   (5) national regulations (as applicable);
   (6) human factors;
   (7) flight safety, incident and accident prevention;
   (8) airmanship;
   (9) legal aspects and enforcement procedures;
   (10) navigational skills including new or current radio navigation aids;
   (11) teaching instrument flying;
   (12) weather related topics including methods of distribution.
   (13) any additional topic selected by the Authority.

(f) Formal sessions should allow for a presentation time of 45 minutes, with 15 minutes for questions. The use of visual aids is recommended, with interactive video and other teaching aids (where available) for breakout groups and workshops.
**GM1 MFCL.940.FI (a) (2) — Revalidation and renewal**

*FI CERTIFICATE: REVALIDATION AND RENEWAL FORM*

### A. AEROPLANES

#### INSTRUCTIONAL FLYING EXPERIENCE

Instructors applying for revalidation of the FI certificate should enter the instructional hours flown during the preceding 36 months.

AMC1 MFCL.930.TRI — Training course

TRI TRAINING COURSE: AEROPLANES

GENERAL

(a) The aim of the TRI (A) training course is to train aeroplane license holders to the level of competence defined in MFCL.920 and adequate for a TRI.

(b) The training course should develop safety awareness throughout by teaching the knowledge, skills and attitudes relevant to the TRI task, and should be designed to give adequate training to the applicant in theoretical knowledge instruction, flight instruction and FSTD instruction to instruct for an aeroplane type rating for which the applicant is qualified.

(c) The TRI (A) training course should give particular emphasis to the role of the individual in relation to the importance of human factors in the man-machine environment and the role of CRM.

(d) Special attention should be given to the applicant’s maturity and judgment including an understanding of adults, their behavioural attitudes and variable levels of learning ability. During the training course the applicants should be made aware of their own attitudes to the importance of flight safety. It will be important during the training course to aim at giving the applicant the knowledge, skills and attitudes relevant to the role of the TRI.

(e) For a TRI (A) the amount of flight training will vary depending on the complexity of the aeroplane type. A similar number of hours should be used for the instruction and practice of pre-flight and post flight briefing for each exercise. The flight instruction should aim to ensure that the applicant is able to teach the air exercises safely and efficiently and should be related to the type of aeroplane on which the applicant wishes to instruct. The content of the training programme should cover training exercises applicable to the aeroplane type as set out in the applicable type rating courses.

(f) A TRI (A) may instruct in a TRI (A) course once he or she has conducted a minimum of four type rating instruction courses.

(g) It is to be noted that airmanship is a vital ingredient of all flight operations. Therefore, in the following air exercises the relevant aspects of airmanship are to be stressed at the appropriate times during each flight.

(h) The student instructor should learn how to identify common errors and how to correct them properly, which should be emphasised at all times.

CONTENT

(i) The training course consists of three parts:

(1) Part 1: teaching and learning instruction that should comply with AMC1 MFCL.920;

(2) Part 2: technical theoretical knowledge instruction (technical training);
(3) Part 3: flight instruction.

Part 1

The content of the teaching and learning part of the FI training course, as established in AMC1 MFCL.930.FI, should be used as guidance to develop the course syllabus.

Part 2

TECHNICAL THEORETICAL KNOWLEDGE INSTRUCTION SYLLABUS

(a) The technical theoretical knowledge instruction should comprise of not less than 10 hours training to include the revision of technical knowledge, the preparation of lesson plans and the development of classroom instructional skills to enable the TRI (A) to instruct the technical theoretical knowledge syllabus.

(b) If a TRI (A) certificate for MP aeroplanes is sought, particular attention should be given to multi-crew cooperation. If a TRI (A) certificate for SP aeroplanes is sought, particular attention should be given to the duty in SP operations.

(c) The type rating theoretical syllabus should be used to develop the TRI (A)’s teaching skills in relation to the type technical course syllabus. The course instructor should deliver example lectures from the applicable type technical syllabus and the candidate instructor should prepare and deliver lectures on topics selected by the course instructor from the type rating course.

Part 3

FLIGHT INSTRUCTION SYLLABUS

(a) The course should be related to the type of aeroplane on which the applicant wishes to instruct.

(b) TEM, CRM and the appropriate use of behavioural markers should be integrated throughout.

(c) The content of the training programme should cover all the significant exercises applicable to the aeroplane type.

(d) The applicant for a TRI (A) certificate should be taught and made familiar with the device, its limitations, capabilities and safety features, and the instructor station, including emergency evacuation.

FSTD TRAINING

(e) The applicant for a TRI (A) certificate should be taught and made familiar with giving instruction from the instructor station. In addition, before being checked for base training instruction, the applicant for a TRI (A) should be taught and made familiar with giving instruction from all operating positions, including demonstrations of appropriate handling exercises.

(f) Training courses should be developed to give the applicant experience in
training a variety of exercises, covering both normal and abnormal operations. The syllabus should be tailored appropriate to the aeroplane type, using exercises considered more demanding for the student. This should include engine-out handling and engine-out operations in addition to representative exercises from the type transition course.

(g) The applicant should be required to plan, brief, train and debrief sessions using all relevant training techniques.

**AEROPLANE TRAINING**

(h) The applicant for a TRI(A) certificate should receive instruction in an FFS to a satisfactory level in:

1. right hand seat familiarisation, which should include at least the following as pilot flying:
   
   (i) re-flight preparation and use of checklists;
   
   (ii) taxiing;
   
   (iii) take-off;
   
   (iv) rejected take-off;
   
   (v) engine failure during take-off, after V1;
   
   (vi) engine inoperative approach and go-around;
   
   (vii) one engine (critical) simulated inoperative landing;
   
   (viii) other emergency and abnormal operating procedures (as necessary).

2. aeroplane training techniques:
   
   (i) methods for giving appropriate commentary;
   
   (ii) particularities of handling the aeroplane in touch and go manoeuvres;
   
   (iii) intervention strategies developed from situations role-played by a TRI course instructor, taken from but not limited to:

   
   (A) take-off configuration warning;
   
   (B) over controlling;
   
   (C) high flare: long float;
   
   (D) long flare;
   
   (E) baulked landing;
(F) immediate go-around from touch;

(G) too high on approach: no flare;

(H) incorrect configuration;

(I) TAWS warning;

(J) misuse of rudder;

(K) over control in roll axis during flare;

(L) incapacitation;

(M) actual abnormal or emergencies.

(j) Additionally, if the applicant is required to train emergency or abnormal procedures in an aeroplane, synthetic device training as follows:

(1) appropriate methods and minimum altitudes for simulating failures;

(2) incorrect rudder inputs;

(3) failure of a critical engine;

(4) approach and full-stop landing with simulated engine-out.

(k) In this case, the abnormal manoeuvres refer to engine-out handling as necessary for completion of type rating training. If the applicant is required to train other abnormal items in the transition course, additional training will be required.

(l) Upon successful completion of the training above, the applicant should receive training in an aeroplane in-flight under the supervision of a TRI (A). At the completion of training the applicant instructor should be required to conduct a training flight under the supervision and to the satisfaction of a TRI (A) nominated for this purpose by the training organisation.

TRAINING FOR ASYMMETRIC POWER FLIGHT ON SP MET AEROPLANES

(m) During this part of the training, special emphasis is to be placed on the:

(1) circumstances in which actual feathering and un-feathering practice will be done, for example safe altitude; compliance with regulations about minimum altitude or height for feathering practice, weather conditions, distance from nearest available aerodrome.

(2) procedure to use for instructor and student co-operation, for example the correct use of touch drills and the prevention of misunderstandings, especially during feathering and unfeathering practice and when zero thrust is being used for asymmetric circuits. This procedure is to include positive agreement as to which engine is being shut down or re-started or set at zero thrust and identifying
each control and naming the engine it is going to affect.

(3) consideration to be given to avoid over-working the operating engine, and the degraded performance when operating the aeroplane during asymmetric flight.

(4) need to use the specific checklist for the aeroplane type.

LONG BRIEFINGS:

(n) Flight on asymmetric power

(1) introduction to asymmetric flight;

(2) feathering the propeller: method of operation;

(3) effects on aeroplane handling at cruising speed;

(4) introduction to effects upon aeroplane performance;

(5) note foot load to maintain a constant heading (no rudder trim);

(6) un-feathering the propeller: regain normal flight;

(7) finding the zero thrust setting: comparison of foot load when feathered and with zero thrust set.

(8) effects and recognition of engine failure in level flight;

(9) the forces and the effects of yaw;

(10) types of failure:

   (i) sudden or gradual;

   (ii) complete or partial.

(11) yaw, direction and further effects of yaw;

(12) flight instrument indications;

(13) identification of failed engine;

(14) the couples and residual out of balance forces: resultant flight attitude;

(15) use of rudder to counteract yaw;

(16) use of aileron: dangers of misuse;

(17) use of elevator to maintain level flight;

(18) use of power to maintain a safe air speed and altitude;

(19) supplementary recovery to straight and level flight: simultaneous
increase of speed and reduction in power;

(20) identification of failed engine: = idle engine;

(21) use of engine instruments for identification:
   (i) fuel pressure or flow;
   (ii) RPM gauge response effect of CSU action at lower and higher air speed;
   (iii) engine temperature gauges.

(22) confirmation of identification: close the throttle of identified failed engine;

(23) effects and recognition of engine failure in turns;

(24) identification and control;

(25) side forces and effects of yaw.

(o) During turning flight:
   (1) effect of 'inside' engine failure: effect sudden and pronounced;
   (2) effect of 'outside' engine failure: effect less sudden and pronounced;
   (3) the possibility of confusion in identification (particularly at low power):
      (i) correct use of rudder;
      (ii) possible need to return to lateral level flight to confirm correct identification;
   (4) visual and flight instrument indications;
   (5) effect of varying speed and power;
   (6) speed and thrust relationship;
   (7) at normal cruising speed and cruising power: engine failure clearly recognised;
   (8) at low safe speed and climb power: engine failure most positively recognised;
   (9) high speed descent and low power: possible failure to notice asymmetry (engine failure);

(p) Minimum control speeds:
   (1) ASI colour coding: red radial line
Note: this exercise is concerned with the ultimate boundaries of controllability in various conditions that a student can reach in a steady asymmetric power state, approached by a gradual speed reduction. Sudden and complete failure should not be given at the flight manual vmca. The purpose of the exercise is to continue the gradual introduction of a student to control an aeroplane in asymmetric power flight during extreme or critical situations. It is not a demonstration of vmca.

(2) techniques for assessing critical speeds with wings level and recovery – dangers involved when minimum control speed and the stalling speed are very close: use of vsse;

(3) establish a minimum control speed for each asymmetrically disposed engine: to establish critical engine (if applicable);

(4) effects on minimum control speeds of:

(i) bank;

(ii) zero thrust setting;

(iii) take-off configuration:

(A) landing gear down and take-off flap set;

(B) landing gear up and take-off flap set.

Note: it is important to appreciate that the use of 5 ° of bank towards the operating engine produces a lower vmca and also a better performance than that obtained with the wings held level. It is now normal for manufacturers to use 5 ° of bank in this manner when determining the vmca for the specific type. Thus the vmca quoted in the aeroplane manual will have been obtained using the technique.

(q) Feathering and un-feathering:

(1) minimum heights for practising feathering or un-featherung drills;

(2) engine handling: precautions (overheating, icing conditions, priming, warm up and method of simulating engine failure: reference to aircraft engine manual and service instructions and bulletins).

(r) Engine failure procedure:

(1) once the maintenance of control has been achieved, the order in which the procedures are carried out will be determined by the phase of operation and the aircraft type;

(2) flight phase:

(i) in cruising flight;
(ii) critical phase such as immediately after take-off or during the approach to landing or during a go-around.

(s) Aircraft type

Variations will inevitably occur in the order of certain drills and checks due to differences between aeroplane types and perhaps between models of the same type. The flight manual or equivalent document (for example owner’s manual or pilot’s operating handbook) is to be consulted to establish the exact order of these procedures.

For example, one flight manual or equivalent document (for example owner’s manual or pilot’s operating handbook) may call for the raising of flaps and landing gear before feathering, whilst another may recommend feathering as a first step. The reason for this latter procedure could be due to the fact that some engines cannot be feathered if the rpm drops below a certain figure.

Again, in some aeroplanes, the raising of the landing gear may create more drag during retraction due to the transient position of the landing gear doors and as a result of this retraction would best be left until feathering has been accomplished and propeller drag reduced.

Therefore, the order in which the drills and checks are shown in this syllabus under immediate and subsequent actions are to be used as a general guide only and the exact order of precedence is determined by reference to the flight manual or equivalent document (for example owner’s manual or pilot’s operating handbook) for the specific aeroplane type being used on the course.

(t) In-flight engine failure in cruise or other flight phase not including take-off or landing:

(1) immediate actions:

(i) recognition of asymmetric condition;

(ii) identification and confirmation of failed engine:

(A) idle leg = idle engine;

(B) closing of throttle for confirmation.

(iii) cause and fire check:

(A) typical reasons for failure;

(B) methods of rectification.

(iv) feathering decision and procedure:

(A) reduction of other drag;

(B) need for speed but not haste;
(C) use of rudder trim.

(2) subsequent actions:

(i) live engine:
   (A) temperature, pressures and power;
   (B) remaining services;
   (C) electrical load: assess and reduce as necessary;
   (D) effect on power source for air driven instruments;
   (E) landing gear;
   (F) flaps and other services.

(ii) re-plan flight:
   (A) ATC and weather;
   (B) terrain clearance, SE cruise speed;
   (C) decision to divert or continue.

(iii) fuel management: best use of remaining fuel;

(iv) dangers of re-starting damaged engine;

(v) action if unable to maintain altitude: effect of altitude on power available;

(vi) effects on performance;

(vii) effects on power available and power required;

(viii) effects on various airframe configuration and propeller settings;

(ix) use of flight or owner’s manual:
   (A) cruising;
   (B) climbing: ASI colour coding (blue line);
   (C) descending;
   (D) turning.

(x) ‘live’ engine limitations and handling;

(xi) take-off and approach: control and performance;
(u) Significant factors:

(1) significance of take-off safety speed:
   (i) effect of landing gear, flap, feathering, take-off, trim setting and systems for operating landing gear and flaps;
   (ii) effect on mass, altitude and temperature (performance).

(2) significance of best SE climb speed (vyse):
   (i) acceleration to best engine climb speed and establishing a positive climb;
   (ii) relationship of SE climb speed to normal climb speed;
   (iii) action if unable to climb.

(3) significance of asymmetric committal height and speed: action if baulked below asymmetric committal height;

(v) Engine failure during take-off:

(1) below vmca or unstick speed:
   (i) accelerate or stop distance considerations;
   (ii) prior use of flight manual data if available.

(2) above vmca or unstick speed and below safety speed;

(3) immediate re-landing or use of remaining power to achieve forced landing;

(4) considerations:
   (i) degree of engine failure;
   (ii) speed at the time;
   (iii) mass, altitude, temperature (performance);
   (iv) configuration;
   (v) length of runway remaining;
   (vi) position of any obstacles ahead;

(w) Engine failure after take-off:

(1) simulated at a safe height and at or above take-off safety speed;

(2) considerations:
(i) need to maintain control;
(ii) use of bank towards operating engine;
(iii) use of available power achieving best SE climb speed;
(iv) mass, altitude, temperature (performance);
(v) effect of prevailing conditions and circumstances.

(3) Immediate actions:
(i) maintenance of control, including air speed and use of power;
(ii) recognition of asymmetric condition;
(iii) identification and confirmation of failed engine;
(iv) feathering and removal of drag (procedure for type);
(v) establishing best SE climb speed.

(4) Subsequent actions: whilst carrying out an asymmetric power climb to the downwind position at SE best rate of climb speed:
(i) cause and fire check;
(ii) live engine, handling considerations;
(iii) remaining services;
(iv) ATC liaison;
(v) fuel management.

Note: these procedures are applicable to aeroplane type and flight situation.

(x) Asymmetric committal height:

(1) Asymmetric committal height is the minimum height needed to establish a positive climb whilst maintaining adequate speed for control and removal of drag during an approach to a landing. Because of the significantly reduced performance of many CS-23 aeroplanes when operating on one engine, consideration is to be given to a minimum height from which it would be safely possible to attempt a go-around procedure, during an approach when the flight path will have to be changed from a descent to a climb with the aeroplane in a high drag configuration.

Due to the height loss which will occur during the time that the operating engine is brought up to full power, landing gear and flap retracted, and the aeroplane established in a climb at v minimum
height (often referred to as 'asymmetric committal height’) is to be selected, below which the pilot should not attempt to take the aeroplane round again for another circuit. This height will be compatible with the aeroplane type, all up weight, altitude of the aerodrome being used, air temperature, wind, the height of obstructions along the climb out path, and pilot competence.

(2) Circuit approach and landing on asymmetric power:
(i) definition and use of asymmetric committal height;
(ii) use of standard pattern and normal procedures;
(iii) action if unable to maintain circuit height;
(iv) speed and power settings required;
(v) decision to land or go-around at asymmetric committal height: factors to be considered;

(3) Undershooting: importance of maintaining correct air speed, (not below vyse).

(x) Speed and heading control:
(1) height, speed and power relationship: need for minimum possible drag;
(2) establishing positive climb at best SE rate of climb speed:
   (i) effect of availability of systems, power for flap and landing gear;
   (ii) operation and rapid clean up.

Note 1: The air speed at which the decision is made to commit the aeroplane to a landing or to go-around should normally be the best SE rate of climb speed and in any case not less than the safety speed.

Note 2: On no account should instrument approach ‘decision height’ and its associated procedures be confused with the selection of minimum height for initiating a go-around in asymmetric power flight.

(y) Engine failure during an all engines approach or missed approach:
(1) use of asymmetric committal height and speed considerations;
(2) speed and heading control: decision to attempt a landing, go-around or force land as circumstances dictate.

Note: at least one demonstration and practice of engine failure in this situation should be performed during the course.

(z) Instrument flying on asymmetric power:
(1) considerations relating to aircraft performance during:
(i) straight and level flight;
(ii) climbing and descending;
(iii) standard rate turns;
(iv) level, climbing and descending turns including turns onto pre-selected headings.

(2) vacuum operated instruments: availability;
(3) electrical power source.

ADDITIONAL TRAINING FOR PRIVILEGES TO CONDUCT LINE FLYING UNDER SUPERVISION

(AA) In order to be able to conduct line flying under supervision, as provided in MFCL.910.TRI (a), the TRI should have received the additional training described in paragraph (k) of this AMC.

TRAINING WHERE NO FSTD EXISTS

(ab) Where no FSTD exists for the type for which the certificate is sought, a similar course of training should be conducted in the applicable aeroplane type. This includes all elements listed under this sub paragraph, the synthetic device elements being replaced with appropriate exercises in an aeroplane of the applicable type.

AMC2 MFCL.930.TRI — training course

HELICOPTERS GENERAL

(a) The aim of the TRI (H) course is to train helicopter license holders to the level of competence defined in MFCL.920 and adequate for a TRI.

(b) The training course should develop safety awareness throughout by teaching the knowledge, skills and attitudes relevant to the TRI (H) task, and should be designed to give adequate training to the applicant in theoretical knowledge instruction, flight instruction and FSTD instruction to instruct for a helicopter type rating for which the applicant is qualified.

(c) The TRI (H) training course should give particular emphasis to the role of the individual in relation to the importance of human factors in the man-machine environment and the role of CRM.

(d) Special attention should be given to the applicant’s maturity and judgment including an understanding of adults, their behavioural attitudes and variable levels of learning ability. During the training course the applicants should be made aware of their own attitudes to the importance of flight safety. It will be important during the course of training to aim at giving the applicant the knowledge, skills and attitudes relevant to the role of the TRI.

(e) For a TRI (H) certificate the amount of flight training will vary depending on the complexity of the helicopter type.
(f) A similar number of hours should be used for the instruction and practice of pre-flight and post flight briefing for each exercise. The flight instruction should aim to ensure that the applicant is able to teach the air exercises safely and efficiently and should be related to the type of helicopter on which the applicant wishes to instruct. The content of the training program should cover training exercises applicable to the helicopter type as set out in the applicable type rating course syllabus.

(g) A TRI (H) may instruct in a TRI (H) course once he or she has conducted a minimum of four type rating instruction courses.

CONTENT

(h) The training course consists of three parts:

(1) Part 1: teaching and learning, that should comply with AMC1 MFCL.920;

(2) Part 2: technical theoretical knowledge instruction (technical training);

(3) Part 3: flight instruction.

Part 1

The content of the teaching and learning part of the FI training course, as established in AMC1 MFCL.930.FI, should be used as guidance to develop the course syllabus.

Part 2

TECHNICAL THEORETICAL KNOWLEDGE INSTRUCTION SYLLABUS

(a) The technical theoretical knowledge instruction should comprise of not less than 10 hours training to include the revision of technical knowledge, the preparation of lesson plans and the development of classroom instructional skills to enable the TRI (H) to instruct the technical theoretical knowledge syllabus.

(b) If a TRI (H) certificate for MP helicopters is sought, particular attention should be given to multi-crew cooperation.

(c) The type rating theoretical syllabus should be used to develop the TRI (H)’s teaching skills in relation to the type technical course syllabus. The course instructor should deliver example lectures from the applicable type technical syllabus and the candidate instructor should prepare and deliver lectures on topics selected by the course instructor from the subject list below:

(1) helicopter structure, transmissions, rotor and equipment, normal and abnormal operation of systems:

   (i) dimensions;

   (ii) engine including aux. power unit, rotors and transmissions;
(iii) fuel system;
(iv) air-conditioning;
(v) ice protection, windshield wipers and rain repellent;
(vi) hydraulic system;
(vii) landing gear;
(viii) flight controls, stability augmentation and autopilot systems;
(ix) electrical power supply;
(x) Flight instruments, communication, radar and navigation equipment; cockpit, cabin and cargo compartment;
(xi) emergency equipment.

(2) limitations:
(i) general limitations, according to the helicopter flight manual;
(ii) minimum equipment list.

(3) performance, flight planning and monitoring:
(i) performance;
(ii) light planning.

(4) load and balance and servicing:
(i) load and balance;
(ii) servicing on ground;

(5) emergency procedures;

(6) special requirements for helicopters with EFIS;

(7) optional equipment.

Part 3

FLIGHT INSTRUCTION SYLLABUS

(a) The amount of flight training will vary depending on the complexity of the helicopter type. At least 5 hours flight instruction for a SP helicopter and at least 10 hours for a MP ME helicopter should be counted. A similar number of hours should be used for the instruction and practice of pre-flight and post flight briefing for each exercise. The flight instruction should aim to ensure that
the applicant is able to teach the air exercises safely and efficiently and related to the type of helicopter on which the applicant wishes to instruct. The content of the training programme should only cover training exercises applicable to the helicopter type as set out in Appendix 9 to Part-MFCL.

(b) If a TRI (H) certificate for MP helicopters is sought, particular attention should be given to MCC.

(c) If a TRI (H) certificate for revalidation of instrument ratings is sought, then the applicant should hold a valid instrument rating.

FLIGHT OR FSTD TRAINING

(d) The training course should be related to the type of helicopter on which the applicant wishes to instruct.

(e) For MP helicopter type ratings MCC, CRM and the appropriate use of behavioural markers should be integrated throughout.

(f) The content of the training programme should cover identified and significant exercises applicable to the helicopter type.

FSTD TRAINING

(g) The applicant for a TRI (H) certificate should be taught and made familiar with the device, its limitations, capabilities and safety features, and the instructor station.

(h) The applicant for a TRI (H) certificate should be taught and made familiar with giving instruction from the instructor station seat as well as the pilot’s seats, including demonstrations of appropriate handling exercises.

(i) Training courses should be developed to give the applicant experience in training a variety of exercises, covering both normal and abnormal operations. The syllabus should be tailored appropriate to the helicopter type, using exercises considered more demanding for the student. This should include engine-out handling and engine-out operations in addition to representative exercises from the type transition course.

(j) The applicant should be required to plan, brief, train and debrief sessions using all relevant training techniques.

HELICOPTER TRAINING

(k) The applicant for a TRI(H) certificate should receive instruction in an FSTD to a satisfactory level in:

(1) left hand seat familiarisation, and in addition right hand seat familiarisation where instruction is to be given to co-pilots operating in the left hand seat, which should include at least the following as pilot flying:

   (i) pre-flight preparation and use of checklists;

   (ii) taxiing: ground and air;
(iii) take-off and landings;
(iv) engine failure during take-off, before DPATO;
(v) engine failure during take-off, after DPATO;
(vi) engine inoperative approach and go-around;
(vii) one engine simulated inoperative landing;
(viii) autorotation to landing or power recovery;
(ix) other emergency and abnormal operating procedures (as necessary);
(x) instrument departure, approach and go-around with one engine
simulated inoperative should be covered where TRI (H) privileges
include giving instrument instruction for the extension of an IR (H)
to additional types.

(2) helicopter training techniques:
(i) methods for giving appropriate commentary;
(ii) instructor demonstrations of critical manoeuvres with commentary;
(iii) particularities and safety considerations associated with handling
the helicopter in critical manoeuvres such as one-engine-
inoperative and autorotation exercises;
(iv) where relevant, the conduct of instrument training with particular
emphasis on weather restrictions, dangers of icing and limitations
on the conduct of critical manoeuvres in instrument
meteorological conditions;
(v) intervention strategies developed from situations role-played by a
TRI(H) course instructor, taken from but not limited to:
   (A) incorrect helicopter configuration;
   (B) over controlling;
   (C) incorrect control inputs;
   (D) excessive flare close to the ground;
   (E) one-engine-inoperative take-off and landings;
   (F) incorrect handling of autorotation;
   (G) static or dynamic rollover on take-off or landing;
(H) too high on approach with associated danger of vortex ring or settling with power;

(I) incapacitation;

(L) abnormal and emergency procedures and appropriate methods and minimum altitudes for simulating failures in the helicopter;

(M) failure of the driving engine during OEI manoeuvres.

Upon successful completion of the training above, the applicant should receive sufficient training in a helicopter in-flight under the supervision of a TRI (H) to a level where the applicant is able to conduct the critical items of the type rating course to a safe standard. Of the minimum course requirements of 5 hours flight training for a SP helicopter or 10 hours for a MP helicopter, up to 3 hours of this may be conducted in an FSTD.

TRAINING WHERE NO FSTD EXISTS

(m) Where no FSTD exists for the type for which the TRI (H) certificate is sought, a similar course of training should be conducted in the applicable helicopter type. This includes all elements listed under sub paragraphs (k) (1) and (2) of this AMC, the FSTD elements being replaced with appropriate exercises in a helicopter of the applicable type, subject to any restrictions placed on the conduct of critical exercises associated with helicopter flight manual limitations and safety considerations.

AMC1 MFCL.930.CRI — Training course

GENERAL

(a) The aim of the CRI training course is to train aircraft license holders to the level of competence defined in MFCL.920 and adequate to a CRI.

(b) The training course should be designed to give adequate training to the applicant in theoretical knowledge instruction, flight instruction and FSTD instruction to instruct for any class or type rating for non-complex non-high performance SP aeroplanes for which the applicant is qualified.

(c) The flight training should be aimed at ensuring that the applicant is able to teach the air exercises safely and efficiently to students undergoing a course of training for the issue of a class or type rating for non-complex non-high performance SP aeroplanes. The flight training may take place on the aeroplane or an FFS.

(d) It is to be noted that airmanship is a vital ingredient of all flight operations. Therefore, in the following air exercises the relevant aspects of airmanship are to be stressed at the appropriate times during each flight.

(e) The student instructor should learn how to identify common errors and how to correct them properly, which should be emphasised at all times.
CONTENT

The training course consists of three parts:

1. Part 1: teaching and learning that should follow the content of AMC1 MFCL.920;
2. Part 2: technical theoretical knowledge instruction (technical training);

Part 1

The content of the teaching and learning part of the FI training course, as established in AMC1 MFCL.930.FI, should be used as guidance to develop the course syllabus.

Part 2

This syllabus is concerned only with the training on ME aeroplanes. Therefore, other knowledge areas, common to both SE and ME aeroplanes, should be revised as necessary to cover the handling and operating of the aeroplane with all engines operative, using the applicable sections of the ground subjects syllabus for the FI course. Additionally, the ground training should include 25 hours of classroom work to develop the applicant’s ability to teach a student the knowledge and understanding required for the air exercise section of the ME training course. This part will include the long briefings for the air exercises.

GENERAL SUBJECTS
(a) Air legislation:
   (1) aeroplane performance group definitions;
   (2) methods of factoring gross performance.
(b) Asymmetric power flight;
(c) Principles of flight;
(d) The problems:
   (1) asymmetry;
   (2) control;
   (3) performance;
(e) The forces and couples:
   (1) offset thrust line;
   (2) asymmetric blade effect;
   (3) offset drag line;
   (4) failed engine propeller drag;
   (5) total drag increase;
   (6) asymmetry of lift;
   (7) uneven propeller slipstream effect;
   (8) effect of yaw in level and turning flight;
   (9) thrust and rudder side force couples;
   (10) effect on moment arms.
(f) Control in asymmetric power flight:
   (1) use, misuse and limits of:
      (i) rudder;
      (ii) aileron;
      (iii) elevators.
   (2) effect of bank or sideslip and balance;
   (3) decrease of aileron and rudder effectiveness;
(4) fin stall possibility;
(5) effect of IAS and thrust relationship;
(6) effect of residual unbalanced forces;
(7) foot loads and trimming.

(g) Minimum control and safety speeds:
(1) minimum control speed (vmc);
(2) definition;
(3) origin;
(4) factors affecting (vmc):
   (i) thrust;
   (ii) mass and centre of gravity position;
   (iii) altitude;
   (iv) landing gear;
   (v) flaps;
   (vi) cowl flaps or cooling gills;
   (vii) turbulence or gusts;
   (viii) pilot reaction or competence;
   (ix) banking towards the operating engine;
   (x) drag;
   (xi) feathering;
   (xii) critical engine.
(5) take-off safety speed;
(6) definition or origin of v2;
(7) other relevant v codes;

(h) Aeroplane performance: one engine inoperative:
(1) effect on excess power available;
(2) SE ceiling;
(3) cruising, range and endurance;
(4) acceleration and deceleration;
(5) zero thrust, definition and purpose;

(i) Propellers:
(1) variable pitch: general principles;
(2) feathering and un-feathering mechanism and limitations (for example minimum RPM);

(j) Specific aeroplane type;

(k) Aeroplane and engine systems:
(1) operation normal;
(2) operation abnormal;
(3) emergency procedures.

(l) Limitations: airframe:
(1) load factors;
(2) landing gear and flap limiting speeds ($V_{lo}$ and $V_{fe}$);
(3) rough air speed ($V_{RA}$);
(4) maximum speeds ($V_{no}$ and $V_{ne}$).

(m) Limitations: engine:
(1) RPM and manifold pressure;
(2) oil temperature and pressure;
(3) emergency procedures.

(n) Mass and balance:
(to be covered in conjunction with the flight manual or equivalent document (for example owner’s manual or pilot’s operating handbook))
(1) mass and balance documentation for aeroplane type;
(2) revision of basic principles;
(3) calculations for specific aeroplane type.

(o) Mass and performance:

(to be covered in conjunction with the flight manual or equivalent document (for example owner’s manual or pilot’s operating handbook))

(1) calculations for specific aeroplane type (all engines operating);
(2) take-off run;
(3) take-off distance;
(4) accelerate and stop distance;
(5) landing distance;
(6) landing run;
(7) take-off or climb out flight path;
(8) calculations for specific aeroplane type (one engine operating);
(9) climb out flight path;
(10) landing distance;
(11) landing run.

Part 3

FLIGHT INSTRUCTION SYLLABUS: NORMAL FLIGHT

(a) This part is similar to the air exercise sections of the SE FI course, including ‘Introduction to instrument flying’ except that the objectives, airmanship considerations and common errors are related to the operation of an ME aeroplane.

(b) The purpose of this part is to acquaint the applicant with the teaching aspects of the operational procedures and handling of an ME aeroplane with all engines functioning.

(c) The following items should be covered:

(1) aeroplane familiarisation;
(2) pre-flight preparation and aeroplane inspection;
(3) engine starting procedures;
(4) taxiing;
(5) pre take-off procedures;
(6) the take-off and initial climb:
   (i) into wind;
   (ii) crosswind;
   (iii) short field.
(7) climbing;
(8) straight and level flight;
(9) descending (including emergency descent procedures);
(10) turning;
(11) slow flight;
(12) stalling and recoveries;
(13) instrument flight: basic;
(14) emergency drills (not including engine failure);
(15) circuit, approach and landing:
   (i) into wind;
   (ii) crosswind;
   (iii) short field;
(16) mislanding and going round again;
(17) actions after flight.

AIR EXERCISES

(d) The following air exercises are developments of the basic SE syllabus which are to be related to the handling of ME types to ensure that the student learns the significance and use of controls and techniques which may be strange to the student in all normal, abnormal and emergency situations, except that engine failure and flight on asymmetric power are dealt with separately in the air exercises in Part 2.

EXERCISE 1: FAMILIARISATION WITH THE AEROPLANE

(a) Long briefing objectives:
   (1) introduction to the aeroplane;
   (2) explanation of the cockpit layout;
(3) systems and controls;
(4) aeroplane power plant;
(5) checklists and drills;
(6) differences when occupying the instructor’s seat;
(7) emergency drills:
   (i) action in event of fire in the air and on the ground;
   (ii) escape drills: location of exits and use of emergency equipment (for example fire extinguishers, etc.).
(8) pre-flight preparation and aeroplane inspection:
   (i) aeroplane documentation;
   (ii) external checks;
   (iii) internal checks;
   (iv) harness, seat or rudder pedal adjustment;
(9) engine starting procedures:
   (i) use of checklists;
   (ii) checks before starting;
   (iii) checks after starting.

(b) Air exercise:
(1) external features;
(2) cockpit layout;
(3) aeroplane systems;
(4) checklists and drills;
(5) action if fire in the air and on the ground;
   (i) engine;
   (ii) cabin;
   (iii) electrical.
(6) systems failure (as applicable to type);
(7) escape drills (location and use of emergency equipment and exits);

(8) preparation for and action after flight:

   (i) flight authorisation and aeroplane acceptance;
   (ii) technical log or certificate of maintenance release;
   (iii) mass and balance and performance considerations;
   (iv) external checks;
   (v) internal checks, adjustment of harness or rudder pedals;
   (vi) starting and warming up engines;
   (vii) checks after starting;
   (viii) radio navigation and communication checks;
   (ix) altimeter checks and setting procedures;
   (x) power checks;
   (xi) running down and switching off engines;
   (xii) completion of authorisation sheet and aeroplane serviceability documents.

EXERCISE 2: TAXIING

(a) Long briefing objectives:

   (1) pre-taxiing area precautions (greater mass: greater inertia);
   (2) effect of differential power;
   (3) precautions on narrow taxiways;
   (4) pre take-off procedures:
       (i) use of checklist;
       (ii) engine power checks;
       (iii) pre take-off checks;
       (iv) instructor’s briefing to cover the procedure to be followed should an emergency occur during take-off, for example engine failure.

   (5) the take-off and initial climb:
(i) ATC considerations;
(ii) factors affecting the length of the take-off run or distance;
(iii) correct lift-off speed;
(iv) importance of safety speed;
(v) crosswind take-off, considerations and procedures;
(vi) short field take-off, considerations and procedures;
(vii) engine handling after take-off: throttle, pitch and engine synchronisation.

(6) climbing:
   (i) pre-climbing checks;
   (ii) engine considerations (use of throttle or pitch controls);
   (iii) maximum rate of climb speed;
   (iv) maximum angle of climb speed;
   (v) synchronising the engines.

(b) Air exercise
   (1) pre-taxing checks;
   (2) starting, control of speed and stopping;
   (3) control of direction and turning;
   (4) turning in confined spaces;
   (5) leaving the parking area;
   (6) freedom of rudder movement (importance of pilot ability to use full rudder travel);
   (7) instrument checks;
   (8) emergencies (brake or steering failure);
   (9) pre take-off procedures:
       (i) use of checklist;
       (ii) engine power and system checks;
(iii) pre take-off checks;
(iv) instructor’s briefing if emergencies during take-off.

(10) the take-off and initial climb:
(i) ATC considerations;
(ii) directional control and use of power;
(iii) lift-off speed;
(iv) crosswind effects and procedure;
(v) short field take-off and procedure.
(vi) procedures after take-off (at an appropriate stage of the course):
   (A) landing gear retraction;
   (B) flap retraction (as applicable);
   (C) selection of manifold pressure and RPM;
   (D) engine synchronisation;
   (E) other procedures (as applicable).

(11) climbing:
(i) pre-climbing checks;
(ii) power selection for normal and maximum rate climb;
(iii) engine and RPM limitations;
(iv) effect of altitude on manifold pressure, full throttle;
(v) levelling off: power selection;
(vi) climbing with flaps down;
(vii) recovery to normal climb;
(viii) en-route climb (cruise climb);
(ix) maximum angle of climb;
(x) altimeter setting procedures;
(xi) prolonged climb and use of cowl flaps or cooling gills;
(xii) instrument appreciation.

**EXERCISE 3: STRAIGHT AND LEVEL FLIGHT**

(a) Long briefing objectives:

(1) selection of power: throttle or pitch controls;

(2) engine synchronisation;

(3) fuel consumption aspects;

(4) use of trimming controls: elevator and rudder (aileron as applicable);

(5) operation of flaps:
   
   (i) effect on pitch attitude;
   
   (ii) effect on air speed.

(6) operation of landing gear:

   (i) effect on pitch attitude;

   (ii) effect on air speed.

(7) use of mixture controls;

(8) use of alternate air or carburettor heat controls;

(9) operation of cowl flaps or cooling gills;

(10) use of cabin ventilation and heating systems;

(11) operation and use of the other systems (as applicable to type);

(12) descending:

   (i) pre-descent checks;

   (ii) normal descent;

   (iii) selection of throttle or pitch controls;

   (iv) engine cooling considerations;

   (v) emergency descent procedure.

(13) turning:

   (i) medium turns;
(ii) climbing and descending turns;

(iii) steep turns (45 ° of bank or more).

(b) Air exercise:

(1) at normal cruising power:
   (i) selection of cruise power;
   (ii) manifold pressure or RPM;
   (iii) engine synchronisation;
   (iv) use of trimming controls;
   (v) performance considerations: range or endurance.

(2) instrument appreciation;

(3) operation of flaps (in stages):
   (i) air speed below vfe;
   (ii) effect on pitch attitude;
   (iii) effect on air speed.

(4) operation of landing gear:
   (i) air speed below vlo / vle;
   (ii) effect on pitch attitude;
   (iii) effect on air speed.

(5) use of mixture controls;

(6) use of alternate air or carburettor control;

(7) operation of cowl flaps or cooling gills;

(8) operation of cabin ventilation or heating systems;

(9) operation and use of other systems (as applicable to type);

(10) descending;
   (i) pre-descent checks;
   (ii) power selection: manifold pressure or RPM;
   (iii) powered descent (cruise descent);
(iv) engine cooling considerations: use of cowl flaps or cooling gills;

(v) levelling off;

(vi) descending with flaps down;

(vii) descending with landing gear down;

(viii) altimeter setting procedure;

(ix) instrument appreciation;

(x) emergency descent:

(A) as applicable to type;

(B) limitations in turbulence $v_{no}$.

(11) turning:

(i) medium turns;

(ii) climbing and descending turns;

(iii) steep turns: 45° of ban;

(iv) instrument appreciation.

**EXERCISE 4: SLOW FLIGHT**

(a) Long briefing objectives:

(1) aeroplane handling characteristics during slow flight: flight at $v_{s1}$ and $v_{so}$ +5 knots;

(2) simulated go-around from slow flight:

(i) at $V_{sse}$ with flaps down;

(ii) note pitch trim change.

(3) stalling:

(i) power selection;

(ii) symptoms approaching the stall;

(iii) full stall characteristics;

(iv) recovery from the full stall;
(v) recovery at the incipient stall;
(vi) stalling and recovery in the landing configuration;
(vii) recovery at the incipient stage in the landing configuration.

(4) instrument flight (basic):
(i) straight and level;
(ii) climbing;
(iii) turning;
(iv) descending.

(5) emergency drills (not including engine failure), as applicable to type;

(6) circuit approach and landing:
(i) downwind leg:
   (A) air speed below vfe;
   (B) use of flaps (as applicable);
   (C) pre-landing checks;
   (D) position to turn onto base leg.
(ii) base leg:
   (A) selection of power (throttle or pitch), flaps and trimming controls;
   (B) maintenance of correct air speed.
(iii) final approach:
   (A) power adjustments (early reaction to undershooting);
   (B) use of additional flaps (as required);
   (C) confirmation of landing gear down;
   (D) selection ‘touch down’ point;
   (E) air speed reduction to Vat;
   (F) maintenance of approach path.
(iv) landing:
(A) greater sink rate;
(B) longer landing distance and run;
(C) crosswind approach and landing;
(D) crosswind considerations;
(E) short field approach and landing;
(F) short field procedure: considerations.

(b) Air exercise

(1) safety checks;
(2) setting up and maintaining (flaps up);
   (i) vs1 + 5 knots;
   (ii) note aeroplane handling characteristics.
(3) setting up and maintaining (flaps down):
   (i) vso + 5 knots;
   (ii) note aeroplane handling characteristics.
(4) simulated go-around from a slow flight with flaps:
   (i) down and air speed not below Vsse, for example air speed at Vsse or vmca + 10 knots;
   (ii) increase to full power and enter a climb;
   (iii) note pitch change.
(5) resume normal flight.
(6) stalling;
   (i) selection of RPM;
   (ii) stall symptoms;
   (iii) full stall characteristics;
(iv) recovery from the full stall: care in application of power;
(v) recovery at the incipient stage;
(vi) stalling and recovery in landing configuration;
(vii) stall recovery at the incipient stage in the landing configuration.

(7) instrument flight (basic):
(i) straight and level;
(ii) climbing;
(iii) turning;
(iv) descending.

(8) emergency drills (not including engine failure), as applicable to type;

(9) circuit, approach and landing:
(i) downwind leg:
   (A) control of speed (below vfe);
   (B) flaps as applicable;
   (C) pre-landing checks;
   (D) control of speed and height;
   (E) base leg turn.

(ii) base leg:
   (A) power selection;
   (B) use of flap and trimming controls;
   (C) maintenance of correct air speed.

(iii) final approach:
   (A) use of additional flap (as required);
   (B) confirmation of landing gear down;
   (C) selection of touchdown point;
   (D) air speed reduction to Vat;
   (E) maintaining correct approach path: use of power.

(iv) landing:
   (A) control of sink rate during flare;
(B) crosswind considerations;

(C) longer landing roll;

(D) short or soft field approach and landing;

(E) considerations and precautions.

(10) Asymmetric power flight.

During this part, special emphasis is to be placed on the:

(i) circumstances in which actual feathering and un-feathered practice will be done, for example safe altitude; compliance with regulations about minimum altitude or height for feathering practice, weather conditions, distance from nearest available aerodrome;

(ii) procedure to use for instructor and student co-operation, for example the correct use of touch drills and the prevention of misunderstandings, especially during feathering and un-feathering practice and when zero thrust is being used for asymmetric circuits. This procedure is to include positive agreement as to which engine is being shut down or re-started or set at zero thrust and identifying each control and naming the engine it is going to affect;

(iii) consideration to be given to avoid over-working the operating engine, and the degraded performance when operating the aeroplane during asymmetric flight;

(iv) need to use the specific checklist for the aeroplane type.

**EXERCISE 5: FLIGHT ON ASYMMETRIC POWER**

(a) Long briefing objectives:

(1) introduction to asymmetric flight;

(2) feathering the propeller: method of operation;

(3) effects on aeroplane handling at cruising speed;

(4) introduction to effects upon aeroplane performance;

(5) note foot load to maintain a constant heading (no rudder trim);

(6) un-feathering the propeller;

(7) return to normal flight finding the zero thrust setting;

(8) comparison of foot load when feathered and with zero thrust set.
(9) effects and recognition of engine failure in level flight;
(10) forces and the effects of yaw;
(11) types of failure:
   (i) sudden or gradual;
   (ii) complete or partial.
(12) yaw, direction and further effects of yaw;
(13) flight instrument indications;
(14) identification of failed engine;
(15) the couples and residual out of balance forces: resultant flight attitude;
(16) use of rudder to counteract yaw;
(17) use of aileron: dangers of misuse;
(18) use of elevator to maintain level flight;
(19) use of power to maintain a safe air speed and altitude;
(20) supplementary recovery to straight and level flight: simultaneous increase of speed and reduction in power;
(21) identification of failed engine: idle leg = idle engine;
(22) use of engine instruments for identification:
   (i) fuel pressure or flow;
   (ii) RPM gauge response effect of CSU action at lower and higher air speed;
   (iii) engine temperature gauges.
(23) confirmation of identification: close the throttle of identified failed engine;
(24) effects and recognition of engine failure in turns;
(25) identification and control;
(26) side forces and effects of yaw.
(27) During turning flight:
   (i) effect of 'inside' engine failure: effect sudden and pronounced;

The DEPARTMENT OF CIVIL AVIATION MFCL ACCEPTABLE MEANS OF COMPLIANCE AND GUIDANCE MATERIAL

(ii) effect of 'outside' engine failure: effect less sudden and pronounced;

(iii) the possibility of confusion in identification (particularly at low power):

(A) correct use of rudder;

(B) possible need to return to lateral level flight to confirm correct identification.

(iv) visual and flight instrument indications;

(v) effect of varying speed and power;

(vi) speed and thrust relationship;

(vii) at normal cruising speed and cruising power: engine failure clearly recognised;

(viii) at low safe speed and climb power: engine failure most positively recognised;

(ix) high speed descent and low power: possible failure to notice asymmetry (engine failure).

(28) Minimum control speeds:

(i) ASI colour coding: red radial line. Note: this exercise is concerned with the ultimate boundaries of controllability in various conditions that a student can reach in a steady asymmetric power state, approached by a gradual speed reduction. Sudden and complete failure should not be given at the Flight Manual vmca. The purpose of the exercise is to continue the gradual introduction of a student to control an aeroplane in asymmetric power flight during extreme or critical situations. It is not a demonstration of vmca.

(ii) Techniques for assessing critical speeds with wings level and recovery: dangers involved when minimum control speed and the stalling speed are very close: use of Vsse;

(iii) Establish a minimum control speed for each asymmetrically disposed engine to establish critical engine (if applicable);

(iv) Effects on minimum control speeds of:

(A) bank;

(B) zero thrust setting;

(C) take-off

(D) configuration:
(a) landing gear down and take-off flap set;

(b) landing gear up and take-off flap set.

Note: it is important to appreciate that the use of 5 ° of bank towards the operating engine produces a lower \( v_{mca} \) and also a better performance than that obtained with the wings held level. It is now normal for manufacturers to use 5 ° of bank in this manner when determining the \( v_{mca} \) for the specific type. Thus, the \( v_{mca} \) quoted in the aeroplane manual will have been obtained using the technique.

(29) Feathering and un-feathering:

(i) minimum heights for practising feathering or un-feathering drills;

(ii) engine handling: precautions (overheating, icing conditions, priming, warm-up, method of simulating engine failure: reference to aircraft engine manual and service instructions and bulletins).

(30) Engine failure procedure:

(i) once the maintenance of control has been achieved, the order in which the procedures are carried out will be determined by the phase of operation and the aircraft type.

(ii) flight phase:

(A) in cruising flight;

(B) critical phase such as immediately after take-off or during the approach to landing or during a go-around.

(31) Aircraft type:

Variations will inevitably occur in the order of certain drills and checks due to differences between aeroplane types and perhaps between models of the same type, and the flight manual or equivalent document (for example owner’s manual or pilot’s operating handbook) is to be consulted to establish the exact order of these procedures.

For example, one flight manual or equivalent document (for example owner’s manual or pilot’s operating handbook) may call for the raising of flaps and landing gear before feathering, whilst another may recommend feathering as a first step. The reason for this latter procedure could be due to the fact that some engines cannot be feathered if the RPM drops below a certain figure.

Again, in some aeroplanes, the raising of the landing gear may create more drag during retraction due to the transient position of the landing gear doors and as a result of this retraction would best be left until feathering has been accomplished and propeller drag
reduced. Therefore, the order in which the drills and checks are shown in this syllabus under ‘immediate actions’ and ‘subsequent actions’ are to be used as a general guide only and the exact order of precedence is determined by reference to the flight manual or equivalent document (for example owner’s manual or pilot’s operating handbook) for the specific aeroplane type being used on the course.

(32) In-flight engine failure in cruise or other flight phase not including take-off or landing:

(i) immediate actions:

(A) recognition of asymmetric condition and control of the aircraft;

(B) identification and confirmation of failed engine:

(a) idle leg = idle engine;

(b) closing of throttle for confirmation.

(C) cause and fire check:

(a) typical reasons for failure;

(b) methods of rectification.

(D) feathering decision and procedure:

(a) reduction of other drag;

(b) need for speed but not haste;

(c) use of rudder trim.

(ii) subsequent actions;

(A) live engine:

(a) temperature, pressures and power;

(b) remaining services;

(c) electrical load: assess and reduce as necessary;

(d) effect on power source for air driven instruments;

(e) landing gear;

(f) flaps and other services.

(B) re-plan flight:
(a) ATC and weather;
(b) terrain clearance, SE cruise speed;
(c) decision to divert or continue.
(C) fuel management: best use of remaining fuel;
(D) dangers of re-starting damaged engine;
(E) action if unable to maintain altitude: effect of altitude on power available;
(F) effects on performance;
(G) effects on power available and power required;
(H) effects on various airframe configuration and propeller settings;
(I) use of flight manual or equivalent document (for example owner’s manual or pilot’s operating handbook):
   (a) cruising;
   (b) climbing: ASI colour coding (blue line);
   (c) descending;
   (d) turning.
(J) ‘live’ engine limitations and handling;
(K) take-off and approach: control and performance.

(33) Significant factors:

   (i) significance of take-off safety speed:
      (A) effect of landing gear, flap, feathering, take-off, trim setting, systems for operating landing gear and flaps;
      (B) effect on mass, altitude and temperature (performance).

   (ii) significance of best SE climb speed (Vyse):
      (A) acceleration to best engine climb speed and establishing a positive climb;
      (B) relationship of SE climb speed to normal climb speed;
      (C) action if unable to climb.
(iii) significance of asymmetric committal height and speed: action if baulked below asymmetric committal height.

(34) Engine failure during take-off:

(i) below $v_{mca}$ or unstick speed:

(A) accelerate or stop distance considerations;
(B) prior use of flight manual data if available.

(ii) above $v_{mca}$ or unstick speed and below safety speed;

(iii) immediate re-landing or use of remaining power to achieve forced landing;

(iv) considerations:

(A) degree of engine failure;
(B) speed at the time;
(C) mass, altitude and temperature (performance);
(D) configuration
(E) length of runway remaining;
(F) position of any obstacles ahead.

(35) Engine failure after take-off:

(i) simulated at a safe height and at or above take-off safety speed;

(ii) considerations:

(A) need to maintain control;
(B) use of bank towards operating engine;
(C) use of available power achieving best SE climb speed;
(D) mass, altitude, temperature (performance);
(E) effect of prevailing conditions and circumstances.
(36) **Immediate actions: maintenance of control, including air speed and use of power:**

(i) recognition of asymmetric condition;

(ii) identification and confirmation of failed engine;

(iii) feathering and removal of drag (procedure for type);

(iv) establishing best SE climb speed.

(37) **Subsequent actions: whilst carrying out an asymmetric power climb to the downwind position at SE best rate of climb speed:**

(i) cause and fire check;

(ii) live engine, handling considerations;

(iii) remaining services;

(iv) ATC liaison;

(v) Fuel management.

Note: these procedures are applicable to aeroplane type and flight situation.

(38) **Significance of asymmetric committal height:**

(i) Asymmetric committal height is the minimum height needed to establish a positive climb whilst maintaining adequate speed for control and removal of drag during an approach to a landing. Because of the significantly reduced performance of many CS/JAR/FAR 23 aeroplanes when operating on one engine, consideration is to be given to a minimum height from which it would be safely possible to attempt a go-around procedure, during an approach when the flight path will have to be changed from a descent to a climb with the aeroplane in a high drag configuration. Due to the height loss which will occur during the time that the operating engine is brought up to full power, landing gear and flap retracted, and the aeroplane established in a climb at vyse a minimum height (often referred to as 'Asymmetric committal height') is to be selected, below which the pilot should not attempt to take the aeroplane round again for another circuit. This height will be compatible with the aeroplane type, all up weight, altitude of the aerodrome being used, air temperature, wind, the height of obstructions along the climb out path, and pilot competence.

(ii) circuit approach and landing on asymmetric power:
(A) definition and use of asymmetric committal height;

(B) use of standard pattern and normal procedures;

(C) action if unable to maintain circuit height;

(D) speed and power settings required;

(E) decision to land or go-around at asymmetric committal height: factors to be considered.

(iii) undershooting importance of maintaining correct air speed (not below \(v_{YSE}\)).

(39) Speed and heading control:

(i) height, speed and power relationship: need for minimum possible drag;

(ii) establishing positive climb at best SE rate of climb speed:

(A) effect of availability of systems, power for flap and landing gear;

(B) operation and rapid clean up.

Note 1: The air speed at which the decision is made to commit the aeroplane to a landing or to go-around should normally be the best SE rate of climb speed and in any case not less than the safety speed. Note 2: On no account should instrument approach ‘decision height’ and its associated procedures be confused with the selection of minimum height for initiating a go-around in asymmetric power flight.

(40) Engine failure during an all engines approach or missed approach:

(i) use of asymmetric committal height and speed considerations;

(ii) speed and heading control;

(iii) decision to attempt a landing, go-around or force land as circumstances dictate.

Note: at least one demonstration and practice of engine failure in this situation should be performed during the course.

(41) Instrument flying on asymmetric power:

(i) considerations relating to aircraft performance during:

(A) straight and level flight;
(B) climbing and descending;

(C) standard rate turns;

(D) level, climbing and descending turns including turns onto pre-selected headings.

(ii) availability of vacuum operated instruments;

(iii) availability of electrical power source.

(b) Air exercise

This section covers the operation of a SP ME aeroplane when one engine has failed and it is applicable to all such light piston aeroplanes. Checklists should be used as applicable.

(1) introduction to asymmetric flight:

(2) close the throttle of one engine;

(3) feather its propeller;

(4) effects on aeroplane handling at cruising speed;

(5) effects on aeroplane performance for example cruising speed and rate of climb;

(6) note foot load to maintain a constant heading;

(7) un-feather the propeller;

(8) return to normal flight finding the zero thrust throttle setting;

(9) comparison of foot load when feathered and with zero thrust set.

(10) effects and recognition of engine failure in level flight with the aeroplane straight and level at cruise speed:

(i) slowly close the throttle of one engine;

(ii) note yaw, roll and spiral descent.

(11) return to normal flight:

(i) close throttle of other engine;

(ii) note same effects in opposite direction.

(12) methods of control and identification of failed engine close one throttle and maintain heading and level flight by use of:

(i) rudder to control yaw;
(ii) aileron to hold wings level;
(iii) elevators to maintain level flight;
(iv) power (as required) to maintain air speed and altitude.

(13) alternative or supplementary method of control:
(i) simultaneously;
(ii) lower aeroplane nose to increase air speed;
(iii) reduce power;
(iv) loss of altitude: inevitable.

(14) identification of failed engine: idle foot = idle engine;

(15) use of instruments for identification:
(i) fuel pressure or fuel flow;
(ii) RPM gauge or CSU action may mask identification;
(iii) engine temperature gauges.

(16) confirmation of identification: close the throttle of the identified failed engine;

(17) effects and recognition of engine failure in turns and effects of 'inside' engine failure:
(i) more pronounced yaw;
(ii) more pronounced roll;
(iii) more pronounced pitch down.

(18) effects of 'outside' engine failure:
(i) less pronounced yaw;
(ii) less pronounced roll;
(iii) less pronounced pitch down.

(19) possibility of confusion in identification:
(i) use of correct rudder application;
(ii) return to lateral level flight if necessary.

(20) flight instrument indications;
(21) effect of varying speed and power;

(22) failure of one engine at cruise speed and power: engine failure clearly recognised;

(23) failure of one engine at low speed and high power (not below vsse): engine failure most positively recognised;

(24) failure of one engine at higher speeds and low power: possible failure to recognise engine failure;

(25) minimum control speeds;

(26) establish the vyse:

(i) select maximum permitted manifold pressure and RPM;

(ii) close the throttle on one engine;

(iii) raise the aeroplane nose and reduce the air speed;

(iv) note the air speed when maximum rudder deflection is being applied and when directional control can no longer be maintained;

(v) lower the aeroplane nose and reduce power until full directional control is regained;

(vi) the lowest air speed achieved before the loss of directional control will be the Vmc for the flight condition;

(vii) repeat the procedure closing the throttle of the other engine;

(viii) the higher of these two air speeds will identify the most critical engine to fail.

Note: warning - in the above situations the recovery is to be initiated immediately before directional control is lost with full rudder applied, or when a safe margin above the stall remains, for example when the stall warning device operates, for the particular aeroplane configuration and flight conditions. On no account should the aeroplane be allowed to decelerate to a lower air speed.

(27) establish the effect of using 5° of bank at Vmc:

(i) close the throttle of one engine;

(ii) increase to full power on the operating engine;

(iii) using 5° of bank towards the operating engine reduce speed to the Vmc;

(iv) note lower Vmc when 5° of bank is used.
(28) 'in-flight’ engine failure procedure;

(29) in cruise and other flight circumstances not including take-off and landing.

(30) Immediate actions: maintenance of control including air speed and use of power:

(i) identification and confirmation of failed engine;

(ii) failure cause and fire check;

(iii) feathering decision and implementation;

(iv) reduction of any other drag, for example flaps, cowl flaps etc.;

(v) retrim and maintain altitude.

(31) Subsequent actions:

(i) live engine:

(A) oil temperature, pressure, fuel flow and power;

(B) remaining services;

(C) electrical load: assess and reduce as necessary;

(D) effect on power source for air driven instruments;

(E) landing gear;

(F) flaps and other services.

(ii) re-plan flight:

(A) ATC and weather;

(B) terrain clearance;

(C) SE cruise speed;

(D) decision to divert or continue;

(iii) fuel management: best use of fuel;

(iv) dangers of re-starting damaged engine;

(v) action if unable to maintain altitude:

(A) adopt Vyse;

(B) effect of altitude on power available.
(vi) effects on performance;

(vii) effects on power available and power required;

(viii) effects on various airframe configurations and propeller settings;

(ix) use of flight manual or equivalent document (for example owner’s manual or pilot’s operating handbook):

(A) cruising;

(B) climbing: ASI colour coding (blue line);

(C) descending;

(D) turning.

(x) ‘live’ engine limitations and handling;

(xi) take-off and approach: control and handling;

Note: to be done at a safe height away from the circuit;

(xii) take-off case with landing gear down and take-off flap set (if applicable);

(xiii) significance of take-off at or above safety speed (at safety speed. The ability to maintain control and to accelerate to SE climb speed with aeroplane clean and zero thrust set. Thereafter to achieve a positive climb);

(xiv) significance of flight below safety speed (below safety speed and above \( v_{mca} \). A greater difficulty to maintain control, a possible loss of height whilst maintaining speed, cleaning up, accelerating to SE climb speed and establishing a positive climb);

(xv) significance of best SE climb speed (the ability to achieve the best rate of climb on one engine with minimum delay).

(32) Significance of asymmetric committal height:

(i) the ability to maintain or accelerate to the best SE rate of climb speed and to maintain heading whilst cleaning up with perhaps a slight height loss before climbing away;

(ii) below this height, the aeroplane is committed to continue the approach to a landing.

(33) Engine failure during take-off run and below safety speed briefing only;

(34) Engine failure after take-off;

Note: to be initiated at a safe height and at not less than take-off
safety speed with due regard to the problems of a prolonged SE climb in the prevailing conditions.

(i) immediate actions:

(A) control of direction and use of bank;
(B) control of air speed and use of power;
(C) recognition of asymmetric condition;
(D) identification and confirmation of failed engine feathering and reduction of drag (procedure for type);
(E) re-trim;

(ii) subsequent actions: whilst carrying out an asymmetric power climb to the downwind position at SE best rate of climb speed:

(A) cause and fire check;
(B) live engine, handling considerations;
(C) drills and procedures applicable to aeroplane type and flight situation;
(D) ATC liaison;
(E) fuel management.

(35) Asymmetric circuit, approach and landing;

(i) downwind and base legs:

(A) use of standard pattern;
(B) normal procedures;
(C) landing gear and flap lowering considerations;
(D) position for base leg;
(E) live engine handling;
(F) air speed and power settings;
(G) maintenance of height.

(ii) final approach:

(A) asymmetric committal height drill;
(B) control of air speed and descent rate;
(C) flap considerations.

(iii) going round again on asymmetric power (missed approach):

(A) not below asymmetric committal height;
(B) speed and heading control;
(C) reduction of drag, landing gear retraction;
(D) maintaining Vyse;
(E) establish positive rate of climb.

(36) Engine failure during all engines approach or missed approach:

Note: to be started at not less than asymmetric committal height and speed and not more than part flap set:

(i) speed and heading control;
(ii) reduction of drag flap;
(iii) decision to attempt landing or go-around;
(iv) control of descent rate if approach is continued;
(v) if go-around is initiated, maintain Vyse, flaps and landing gear retracted and establish positive rate of climb.

Note: at least one demonstration and practice of engine failure in this situation should be performed during the course.

(37) Instrument flying on asymmetric power;

(38) Flight instrument checks and services available:

(i) straight and level flight;
(ii) climbing and descending;
(iii) standard rate turns;
(iv) level, climbing and descending turns including turns onto pre-selected headings.

AMC1 MFCL.940.CRI — Revalidation and renewal

REFRESHER TRAINING

(a) Paragraph (c) (1) of MFCL.940.CRI determine that an applicant for renewal of a CRI certificate shall complete refresher training as a CRI at an ATO. Paragraph (a) (2) also establishes that an applicant for revalidation of the CRI certificate that has not completed a minimum amount of instruction hours (established in paragraph (a) (1)) during the validity period of the certificate
shall undertake refresher training at an ATO for the revalidation of the certificate. The amount of refresher training needed should be determined on a case by case basis by the ATO, taking into account the following factors:

(1) the experience of the applicant;
(2) whether the training is for revalidation or renewal;
(3) the amount of time lapsed since the last time the applicant has conducted training, in the case of revalidation, or since the certificate has lapsed, in the case of renewal. The amount of training needed to reach the desired level of competence should increase with the time lapsed.

(b) Once the ATO has determined the needs of the applicant, it should develop an individual training programme that should be based on the CRI training course and focus on the aspects where the applicant has shown the greatest needs.

**AMC1 MFCL.930.IRI — Training course**

**GENERAL**

(a) The aim of the IRI training course is to train aircraft license holders to the level of competence defined in MFCL.920, and adequate for an IRI.

(b) The IRI training course should give particular stress to the role of the individual in relation to the importance of human factors in the man-machine environment.

(c) Special attention should be paid to the applicant’s levels of maturity and judgement including an understanding of adults, their behavioural attitudes and variable levels of education.

(d) With the exception of the section on ‘teaching and learning’, all the subject detail contained in the theoretical and flight training syllabus is complementary to the instrument rating pilot course syllabus which should already be known by the applicant. Therefore, the objective of the course is to:

(1) refresh and bring up to date the technical knowledge of the student instructor;

(2) train pilots in accordance with the requirements of the modular instrument flying training course;

(3) enable the applicant to develop the necessary instructional techniques required for teaching of instrument flying, radio navigation and instrument procedures to the level required for the issue of an instrument rating;

(4) ensure that the student instrument rating instructor’s flying is of a sufficiently high standard.

(e) In part 3 some of the air exercises of the flight instruction syllabus of this AMC may be combined in the same flight.
(f) During the training course the applicants should be made aware of their own attitudes to the important aspects of flight safety. Improving safety awareness should be a fundamental objective throughout the training course. It will be of major importance for the training course to aim at giving applicants the knowledge, skills and attitudes relevant to an instructor’s task. To achieve this, the course curriculum, in terms of objectives, should comprise at least the following areas.

(g) It is to be noted that airmanship is a vital ingredient of all flight operations. Therefore, in the following air exercises the relevant aspects of airmanship are to be stressed at the appropriate times during each flight.

(h) The student instructor should learn how to identify common errors and how to correct them properly, which should be emphasised at all times.

CONTENT

(i) The training course consists of three parts:

(1) Part 1: teaching and learning that should follow the content of AMC1 MFCL.920.

(2) Part 2: instrument technical theoretical knowledge instruction (technical training).

(3) Part 3: flight instruction.

Part 1
The content of the teaching and learning part of the FI training course, as established in AMC1 MFCL.930.FI, should be used as guidance to develop the course syllabus.

Part 2
THEORETICAL KNOWLEDGE INSTRUCTION SYLLABUS

(a) The instrument theoretical knowledge instruction should comprise not less than 10 hours training to include the revision of instrument theoretical knowledge, the preparation of lesson plans and the development of classroom instructional skills to enable the IRI to instruct the instrument theoretical knowledge syllabus.

(b) All the subject detail contained in the instrument theoretical knowledge instruction syllabus and flight instruction syllabus is complementary to the instrument rating pilot course syllabus which should already be known by the applicant. Therefore, the objective of the course is to:

(1) refresh and bring up to date the technical knowledge of the student instructor;

(2) train pilots in accordance with the requirements of the modular instrument flying training course;

(3) enable the applicant to develop the necessary instructional techniques required for teaching of instrument flying, radio navigation and
instrument procedures to the level required for the issue of an instrument rating; and

(4) ensure that the student instrument rating instructor’s flying is of a sufficiently high standard.

(c) The theoretical subjects covered below should be used to develop the instructor’s teaching skills. The items selected should relate to the student’s background and should be applied to training for an IR.

GENERAL SUBJECTS

(d) Physiological and psychological factors:

(1) the senses;

(2) spatial disorientation;

(3) sensory illusions;

(4) stress.

(e) Flight instruments:

(1) air speed indicator;

(2) altimeter;

(3) vertical speed indicator;

(4) attitude indicator;

(5) heading indicator;

(6) turn and slip indicator;

(7) magnetic compass;

(8) in relation to the above instruments the following items should be covered:

(i) principles of operation;

(ii) errors and in-flight serviceability checks;

(iii) system failures.

(f) Radio navigation aids:

(1) basic radio principles;

(2) use of VHF RTF channels;

(3) the Morse code;
(4) basic principles of radio aids;
(5) use of VOR;
(6) ground and aeroplane equipment;
(7) use of NDB/ADF;
(8) ground and aeroplane equipment;
(9) use of VHF/DF;
(10) radio detection and ranging (radar);
(11) ground equipment;
(12) primary radar;
(13) secondary surveillance radar;
(14) aeroplane equipment;
(15) transponders;
(16) precision approach system;
(17) other navigational systems (as applicable) in current operational use;
(18) ground and aeroplane equipment;
(19) use of DME;
(20) ground and aeroplane equipment;
(21) marker beacons;
(22) ground and aeroplane equipment;
(23) pre-flight serviceability checks;
(24) range, accuracy and limitations of equipment.

(g) Flight planning considerations;

(h) Aeronautical information publications:

(1) the training course should cover the items listed below, but the applicant’s aptitude and previous aviation experience should be taken into account when determining the amount of instructional time allotted. Although a number of items contained under this heading are complementary to those contained in the PPL/CPL/IR syllabi, the instructor should ensure that they have been covered during the applicant’s training and due allowance should be made for the time needed to revise these items as necessary.
(2) AIP
(3) NOTAM class 1 and 2;
(4) AIC;
(5) information of an operational nature;
(6) the rules of the air and ATS;
(7) visual flight rules and instrument flight rules;
(8) flight plans and ATS messages;
(9) use of radar in ATS;
(10) radio failure;
(11) classification of airspace;
(12) airspace restrictions and hazards;
(13) holding and approach to land procedures;
(14) precision approaches and non-precision approaches;
(15) radar approach procedures;
(16) missed approach procedures;
(17) visual manoeuvring after an instrument approach;
(18) conflict hazards in uncontrolled airspace;
(19) communications;
(20) types of services;
(21) extraction of AIP data relating to radio aids;
(22) charts available;
(23) en-route;
(24) departure and arrival;
(25) instrument approach and landing;
(26) amendments, corrections and revision service.

(i) flight planning general:

(27) the objectives of flight planning;
(28) factors affecting aeroplane and engine performance;
(29) selection of alternate(s);
(30) obtaining meteorological information;
(31) services available;
(32) meteorology briefing;
(33) telephone or electronic data processing;
(34) actual weather reports (TAFs, METARs and SIGMET messages);
(35) the route forecast;
(36) the operational significance of the meteorological information obtained (including icing, turbulence and visibility);
(37) altimeter considerations;
(38) definitions of:
   (i) transition altitude;
   (ii) transition level;
   (iii) flight level;
   (iv) QNH;
   (v) regional QNH;
   (vi) standard pressure setting;
   (vii) QFE.
(39) altimeter setting procedures;
(40) pre-flight altimeter checks;
(41) take-off and climb;
(42) en-route;
(43) approach and landing;
(44) missed approach;
(45) terrain clearance;
(46) selection of a minimum safe en-route altitude;
(47) IFR;
(48) preparation of charts;
(49) choice of routes and flight levels;
(50) compilation of flight plan or log sheet;
(51) log sheet entries;
(52) navigation ground aids to be used;
(53) frequencies and identification;
(54) radials and bearings;
(55) tracks and fixes;
(56) safety altitude(s);
(57) fuel calculations;
(58) ATC frequencies (VHF);
(59) tower, approach, en-route, radar, FIS, ATIS, and weather reports;
(60) minimum sector altitudes at destination and alternate aerodromes;
(61) determination of minimum safe descent heights or altitudes (decision heights) at destination and alternate aerodromes.

(j) The privileges of the instrument rating:
(1) outside controlled airspace;
(2) within controlled airspace;
(3) period of validity and renewal procedures.

Part 3
FLIGHT INSTRUCTION SYLLABUS

(a) An approved IRI course should comprise of at least 10 hours of flight instruction, of which a maximum of 8 hours may be conducted in an FSTD. A similar number of hours should be used for the instruction and practice of pre-flight and post-flight briefing for each exercise.

(b) The flight instruction should aim to ensure that the applicant is able to teach the air exercises safely and efficiently.

A. AEROPLANES

LONG BRIEFINGS AND AIR EXERCISES EXERCISE 1: INTRUMENT FLYING (Basic)

(for revision, as deemed necessary by the instructor)
(a) Long briefing objectives:

(1) flight instruments;

(2) physiological considerations;

(3) instrument appreciation:
   (i) attitude instrument flight;
   (ii) pitch indications;
   (iii) bank indications;
   (iv) different instrument presentations;
   (v) introduction to the use of the attitude indicator;
   (vi) pitch attitude;
   (vii) bank attitude;
   (viii) maintenance of heading and balanced flight;
   (ix) instrument limitations (inclusive system failures).

(4) attitude, power and performance:
   (i) attitude instrument flight;
   (ii) control instruments;
   (iii) performance instruments;
   (iv) effect of changing power and configuration;
   (v) cross-checking the instrument indications;
   (vi) instrument interpretation;
   (vii) direct and indirect indications (performance instruments);
   (viii) instrument lag;
   (ix) selective radial scan.

(5) the basic flight manoeuvres (full panel):
   (i) straight and level flight at various air speeds and aeroplane configurations;
   (ii) climbing;
   (iii) descending;
(iv) standard rate turns;
(v) level, climbing and descending on to pre-selected headings.

(b) Air exercise:

(1) instrument flying (basic);
   (i) physiological sensations;
   (ii) instrument appreciation;
   (iii) attitude instrument flight;
   (iv) pitch attitude;
   (v) bank attitude;
   (vi) maintenance of heading and balanced flight;
   (vii) attitude instrument flight;
   (viii) effect of changing power and configuration;
   (ix) cross-checking the instruments;
   (x) selective radial scan;

(2) the basic flight manoeuvres (full panel):

   (i) straight and level flight at various air speeds and aeroplane configurations;
   (ii) climbing;
   (iii) descending;
   (iv) standard rate turns;
   (v) level, climbing and descending on to pre-selected headings.

**EXERCISE 2: INTRUMENT FLYING (Advanced)**

(a) Long briefing objectives:

   (1) full panel;
   (2) 30 ° level turns;
   (3) unusual attitudes: recoveries;
   (4) transference to instruments after take-off;
   (5) limited panel;
   (6) basic flight manoeuvres;
(7) unusual attitudes: recoveries.

(b) Air exercise:

(1) full panel;
(2) 30° level turns;
(3) unusual attitudes: recoveries;
(4) limited panel;
(5) repeat of the above exercises.

EXERCISE 3: RADIO NAVIGATION (APPLIED PROCEDURES): USE OF VOR

(a) Long briefing objectives:

(1) availability of VOR stations en-route;
(2) station frequencies and identification;
(3) signal reception range;
(4) effect of altitude;
(5) VOR radials;
(6) use of OBS;
(7) to or from indicator;
(8) orientation;
(9) selecting radials;
(10) intercepting a pre-selected radial;
(11) assessment of distance to interception;
(12) effects of wind;
(13) maintaining a radial;
(14) tracking to and from a VOR station;
(15) procedure turns;
(16) station passage;
(17) use of two stations for obtaining a fix;
(18) pre-selecting fixes along a track;
(19) assessment of ground speed and timing;
(20) holding procedures;
(21) various entries;
(22) communication (R/T procedures and ATC liaison).

(b) Air exercise:

(1) station selection and identification;
(2) orientation;
(3) intercepting a pre-selected radial;
(4) R/T procedures and ATC liaison;
(5) maintaining a radial inbound;
(6) recognition of station passage;
(7) maintaining a radial outbound;
(8) procedure turn;
(9) use of two stations to obtain a fix along the track;
(10) assessment of ground speed and timing;
(11) holding procedures and entries;
(12) holding at a pre-selected fix;
(13) holding at a VOR station.

**EXERCISE 4: RADIO NAVIGATION (APPLIED PROCEDURES): USE OF NDB**

(a) Long briefing objectives:

(1) availability of an NDB facilities en-route;
(2) location, frequencies, tuning (as applicable) and identification codes;
(3) signal reception range;
(4) static interference;
(5) night effect;
(6) station interference;
(7) mountain effect;
(8) coastal refraction;

(9) orientation in relation to an NDB;

(10) homing;

(11) intercepting a pre-selected magnetic bearing and tracking inbound;

(12) station passage;

(13) tracking outbound;

(14) time and distance checks;

(15) use of two NDBs to obtain a fix or alternatively use of one NDB and one other navaid;

(16) holding procedures and various approved entries;

(17) communication (R/T procedures and ATC liaison).

(b) Air exercise:

(1) selecting, tuning and identifying an NDB;

(2) ADF orientation;

(3) communication (R/T procedures and ATC liaison);

(4) homing;

(5) tracking inbound;

(6) station passage;

(7) tracking outbound;

(8) time and distance checks;

(9) intercepting a pre-selected magnetic bearing;

(10) determining the aeroplane’s position from two NDBs or alternatively from one NDB and one other navaid;

(11) ADF holding procedures and various approved entries.

EXERCISE 5: RADIO NAVIGATION (APPLIED PROCEDURES): USE OF VHF/DF

(a) Long briefing objectives:

(1) availability of VHF/DF facilities en-route;

(2) location, frequencies, station call signs and hours of operation;

(3) signal and reception range;
(4) effect of altitude;
(5) communication (R/T procedures and ATC liaison);
(6) obtaining and using types of bearings, for example QTE, QDM and QDR;
(7) homing to a station;
(8) effect of wind;
(9) use of two VHF/DF stations to obtain a fix (or alternatively one VHF/DF station and one other navaid);
(10) assessment of groundspeed and timing.

(b) Air exercise:
(1) establishing contact with a VHF/DF station;
(2) R/T Procedures and ATC liaison;
(3) obtaining and using a QDR and QTE;
(4) homing to a station;
(5) effect of wind;
(6) use of two VHF/DF stations to obtain a fix (or alternatively one VHF/DF station and one other navaid);
(7) assessment of groundspeed and timing.

EXERCISE 6: RADIO NAVIGATION (APPLIED PROCEEDURES): USE OF DME

(a) Long briefing objectives:
(1) availability of DME facilities;
(2) location, frequencies and identification codes;
(3) signal reception range;
(4) slant range;
(5) use of DME to obtain distance, groundspeed and timing;
(6) use of DME to obtain a fix.

(b) Air exercise:
(1) station selection and identification;
(2) use of equipment functions;
(3) distance;
(4) groundspeed;
(5) timing;
(6) DME arc approach;
(7) DME holding.

**EXERCISE 7: RADIO NAVIGATION (APPLIED PROCEDURES): USE OF TRANSPOUNDERS (SSR)**

(a) Long briefing objectives:
(1) operation of transponders;
(2) code selection procedure;
(3) emergency codes;
(4) precautions when using airborne equipment.

(b) Air exercise:
(1) operation of transponders;
(2) types of transponders;
(3) code selection procedure;
(4) emergency codes;
(5) precautions when selecting the required code.

**EXERCISE 8: RADIO NAVIGATION (APPLIED PROCEDURES): USE OF EN-ROUTE RADAR**

(a) Long briefing objectives:
(1) availability of radar services;
(2) location, station frequencies, call signs and hours of operation;
(3) AIP and NOTAMs;
(4) provision of service;
(5) communication (R/T, procedures and ATC liaison);
(6) airspace radar advisory service;
(7) emergency service;
(8) aircraft separation standards.

(b) Air exercise:

(1) communication (R/T procedures and ATC liaison);
(2) establishing the service required and position reporting;
(3) method of reporting conflicting traffic;
(4) terrain clearance.

EXERCISE 9: PRE-FLIGHT AND AERODROME DEPARTURE AND ARRIVAL PROCEDURES

(a) Long briefing objectives:

(1) determining the serviceability of the aeroplane radio;
(2) navigation equipment;
(3) obtaining the departure clearance;
(4) setting up radio navaids before take-off for example VOR frequencies, required radials, etc.;
(5) aerodrome departure procedures, frequency changes;
(6) altitude and position reporting as required;
(7) SID procedures;
(8) obstacle clearance considerations.

(b) Air exercise:

(1) radio equipment serviceability checks;
(2) departure clearance;
(3) navaid selection;
(4) frequencies, radials, etc.;
(5) aerodrome departure checks, frequency changes, altitude and position reports;
(6) SID procedures.

EXERCISE 10: INSTRUMENT APPROACH: ILS APPROACHES TO SPECIFIED MINIMA AND MISSED APPROACH PROCEDURE

(a) Long briefing objectives:
(1) precision approach charts;
(2) approach to the initial approach fix and minimum sector altitude;
(3) navaid requirements, for example radar, ADF, etc.;
(4) communication (ATC liaison and R/T phraseology);
(5) holding procedure;
(6) the final approach track;
(7) forming a mental picture of the approach;
(8) completion of aerodrome approach checks;
(9) initial approach procedure;
(10) selection of the ILS frequency and identification;
(11) obstacle clearance altitude or height;
(12) operating minima;
(13) achieving the horizontal and vertical patterns;
(14) assessment of distance, groundspeed time, and rate of descent from the final approach fix to the aerodrome;
(15) use of DME (as applicable);
(16) go-around and missed approach procedure;
(17) review of the published instructions;
(18) transition from instrument to visual flight (sensory illusions);
(19) visual manoeuvring after an instrument approach:
   (i) circling approach;
   (ii) visual approach to landing.

(b) Air exercise:
(1) initial approach to the ILS;
(2) completion of approach planning;
(3) holding procedure;
(4) frequency selection and identification of ILS;
(5) review of the published procedure and minimum sector altitude;
(6) communication (ATC liaison and R/T phraseology);
(7) determination of operating minima and altimeter setting;
(8) weather consideration, for example cloud base and visibility;
(9) availability of runway lighting;
(10) ILS entry methods;
(11) radar vectors;
(12) procedural method;
(13) assessment of approach time from the final approach fix to the aerodrome;
(14) determination of:
      (i) the descent rate on final approach;
      (ii) the wind velocity at the surface and the length of the landing runway;
      (iii) the obstruction heights to be borne in mind during visual manoeuvring after an instrument approach;
(15) circling approach;
(16) the approach:
      (i) at the final approach fix;
      (ii) use of DME (as applicable);
      (iii) ATC liaison;
      (iv) note time and establish air speed and descent rate;
      (v) maintaining the localiser and glide path;
      (vi) anticipation in change of wind velocity and its effect on drift;
      (vii) decision height;
(17) runway direction;
(18) overshoot and missed approach procedure;
(19) transition from instrument to visual flight;
(20) circling approach;
(21) visual approach to landing.

**EXERCISE 11: INSTRUMENTS APPROACH: NDB APPROACHES TO**
SPECIFIED MINIMA AND MISSED APPROACH PROCEDURES

(a) Long briefing objectives:
   (1) non-precision approach charts;
   (2) initial approach to the initial approach fix and minimum sector altitude;
   (3) ATC liaison;
   (4) communication (ATC procedures and R/T phraseology);
   (5) approach planning;
   (6) holding procedure;
   (7) the approach track;
   (8) forming a mental picture of the approach;
   (9) initial approach procedure;
   (10) operating minima;
   (11) completion of approach planning;
   (12) achieving the horizontal and vertical patterns;
   (13) assessment of distance, groundspeed time, and rate of descent from the final approach fix to the aerodrome;
   (14) use of DME (as applicable);
   (15) go-around and missed approach procedure;
   (16) review of the published instructions;
   (17) transition from instrument to visual flight (sensory illusions);
   (18) visual manoeuvring after an instrument approach;
   (19) circling approach;
   (20) visual approach to landing.

(b) Air exercise:
   (1) completion of approach planning including determination of:
      (i) descent rate from the final approach fix;
      (ii) the wind velocity at the surface and length of the landing runway;
      (iii) the obstruction heights to be borne in mind during visual manoeuvring after an instrument approach;
(2) circling approach;
(3) go-around and missed approach procedure;
(4) initial approach;
(5) frequency selection and identification;
(6) review of the published procedure and minimum safe sector altitude;
(7) ATC liaison and R/T phraseology;
(8) determination of decision height and altimeter setting;
(9) weather considerations, for example cloud base and visibility;
(10) availability of runway lighting;
(11) determination of inbound track;
(12) assessment of time from final approach fix to the missed approach point;
(13) ATC liaison;
(14) The outbound procedure (inclusive completion of pre-landing checks);
(15) the inbound procedure;
(16) re-check of identification code;
(17) altimeter setting re-checked;
(18) the final approach;
(19) note time and establish air speed and descent rate;
(20) maintaining the final approach track;
(21) anticipation of change in wind velocity and its effect on the drift;
(22) minimum descent altitude or height;
(23) runway direction;
(24) go-around and missed approach procedure;
(25) transition from instrument to visual flight (sensory illusions);
(26) visual approach.

**EXERCISE 12: RADIO NAVIGATION (APPLIED PROCEDURES): USE OF GNSS (to be developed)**
(a) Long briefing objectives: use of GNSS.

(b) Air exercise: use of GNSS.

B. HELICOPTERS

LONG BRIEFINGS AND AIR EXERCISES

EXERCISE 1: INSTRUMENT FLYING (Basic)
(for revision as deemed necessary by the instructor)

(a) Long briefing objectives:

(1) flight instruments;

(2) physiological considerations;

(3) instrument appreciation:
   (i) attitude instrument flight;
   (ii) pitch indications;
   (iii) bank indications;
   (iv) different instrument presentations;
   (v) introduction to the use of the attitude indicator;
   (vi) pitch attitude;
   (vii) bank attitude;
   (viii) maintenance of heading and balanced flight;
   (ix) instrument limitations (inc. system failures);

(4) attitude, power and performance:
   (i) attitude instrument flight;
   (ii) control instruments;
   (iii) performance instruments;
   (iv) effect of changing power;
   (v) cross-checking the instrument indications;
   (vi) instrument interpretation;
   (vii) direct and indirect indications (performance instruments);
   (viii) instrument lag;
(ix) selective radial scan;

(5) the basic flight manoeuvres (full panel):
   (i) straight and level flight at various air speeds;
   (ii) climbing;
   (iii) descending;
   (iv) standard rate turns;
   (v) level, climbing and descending on to pre-selected headings.

(b) Air exercise:
   (1) physiological sensations;
   (2) instrument appreciation;
   (3) attitude instrument flight;
   (4) pitch attitude;
   (5) bank attitude;
   (6) maintenance of heading and balanced flight;
   (7) attitude instrument flight;
   (8) effect of changing power;
   (9) cross-checking the instruments;
   (10) selective radial scan;
   (11) the basic flight manoeuvres (full panel):
      (i) straight and level flight at various air speeds and helicopter configurations;
      (ii) climbing;
      (iii) descending;
      (iv) standard rate turns;
      (v) level, climbing and descending on to pre-selected headings;
      (vi) manoeuvring at minimum and maximum IMC speed.

EXERCISE 2: INSTRUMENT FLYING (Advanced)

(a) Long briefing objectives:
(1) full panel;
(2) 30° level turns;
(3) unusual attitudes: recoveries;
(4) transition to instruments after take-off;
(5) limited panel;
(6) basic flight manoeuvres;
(7) unusual attitudes: recoveries.

(b) Air exercise:
(1) full panel;
(2) 30° level turns;
(3) unusual attitudes: recoveries;
(4) identification and recovery from low pitch steep bank and high pitch steep bank attitudes (at low and high power settings);
(5) limited panel;
(6) repeat of the above exercises.

**EXERCISE 3: RADIO NAVIGATION (APPLIED PROCEDURES): USE OF VOR**

(a) Long briefing objectives:
(1) availability of VOR stations en-route;
(2) station frequencies and identification;
(3) signal reception range;
(4) effect of altitude;
(5) VOR radials;
(6) use of OBS;
(7) to and from indicator;
(8) orientation;
(9) selecting radials;
(10) intercepting a pre-selected radial;
(11) assessment of distance to interception;
(12) effects of wind;
(13) maintaining a radial;
(14) tracking to and from a VOR station;
(15) procedure turns;
(16) station passage;
(17) use of two stations for obtaining a fix;
(18) pre-selecting fixes along a track;
(19) assessment of ground speed and timing;
(20) holding procedures;
(21) various entries;
(22) communication (R/T procedures and ATC liaison).

(b) Air exercise:
(1) station selection and identification;
(2) orientation;
(3) intercepting a pre-selected radial;
(4) R/T procedures and ATC liaison;
(5) maintaining a radial inbound;
(6) recognition of station passage;
(7) maintaining a radial outbound;
(8) procedure turns;
(9) use of two stations to obtain a fix along the track;
(10) assessment of ground speed and timing;
(11) holding procedures and entries;
(12) holding at a pre-selected fix;
(13) holding at a VOR station.
EXERCISE 4: RADIO NAVIGATION (APPLIED PROCEDURES): USE OF NDB

(a) Long briefing objectives:
   (1) availability of NDB facilities en-route;
   (2) location, frequencies, tuning (as applicable) and identification codes;
   (3) signal reception range;
   (4) static interference;
   (5) night effect;
   (6) station interference;
   (7) mountain effect;
   (8) coastal refraction;
   (9) orientation in relation to an NDB;
   (10) homing;
   (11) intercepting a pre-selected magnetic bearing and tracking inbound;
   (12) station passage;
   (13) tracking outbound;
   (14) time and distance checks;
   (15) use of two NDBs to obtain a fix or alternatively use of one NDB and
        one other navaid;
   (16) holding procedures;
   (17) communication (R/T procedures and ATC liaison).

(b) Air exercise:
   (1) selecting, tuning and identifying an NDB;
   (2) ADF orientation;
   (3) communication (R/T procedures and ATC liaison);
   (4) homing;
   (5) tracking inbound;
   (6) station passage;
(7) tracking outbound;
(8) time and distance checks;
(9) intercepting a pre-selected magnetic bearing;
(10) determining the helicopter’s position from two NDBs or alternatively from one NDB and one other navaid;
(11) ADF holding procedures.

**EXERCISE 5: RADIO NAVIGATION (APPLIED PROCEDURES): USE OF VHF/DF**

(a) Long briefing objectives:

(1) availability of VHF/DF facilities en-route;
(2) location, frequencies, station call signs and hours of operation;
(3) signal and reception range;
(4) effect of altitude;
(5) communication (R/T procedures and ATC liaison);
(6) obtaining and using types of bearings, for example QTE, QDM, QDR;
(7) homing to a station;
(8) effect of wind;
(9) use of two VHF/DF stations to obtain a fix (or alternatively one VHF/DF station and one other navaid);
(10) assessment of groundspeed and timing.

(b) Air exercise:

(1) establishing contact with a VHF/DF station;
(2) R/T procedures and ATC liaison;
(3) obtaining and using a QDR and QTE;
(4) homing to a station;
(5) effect of wind;
(6) use of two VHF/DF stations to obtain a fix (or alternatively one VHF/DF station and one other navaid);
(7) assessment of groundspeed and timing.
EXERCISE 6: RADIO NAVIGATION (APPLIED PROCEDURES): USE OF DME

(a) Long briefing objectives:
   (1) availability of DME facilities;
   (2) location, frequencies and identification codes;
   (3) signal reception range;
   (4) slant range;
   (5) use of DME to obtain distance, groundspeed and timing;
   (6) use of DME to obtain a fix;

(b) Air exercise:
   (1) station selection and identification;
   (2) use of equipment functions;
   (3) distance;
   (4) groundspeed;
   (5) timing;
   (6) DME arc approach;
   (7) DME holding.

EXERCISE 7: RADIO NAVIGATION (APPLIED PROCEDURES): USE OF TRANSPONDERS

(a) Long briefing objectives:
   (1) operation of transponders;
   (2) code selection procedure;
   (3) emergency codes;
   (4) precautions when using airborne equipment.

(b) Air exercise:
   (1) operation of transponders;
   (2) types of transponders;
   (3) code selection procedure;
(4) emergency codes;
(5) precautions when selecting the required code.

**EXERCISE 8: RADIO NAVIGATION (APPLIED PROCEDURES): USE OF EN-ROUTE RADAR SERVICES**

(a) Long briefing objectives:

(1) availability of radar services;
(2) location, station frequencies, call signs and hours of operation;
(3) AIP and NOTAMS;
(4) provision of service;
(5) communication (R/T procedures and ATC liaison);
(6) airspace radar advisory service;
(7) emergency service;
(8) aircraft separation standards.

(b) Air exercise:

(1) communication (R/T procedures and ATC liaison);
(2) establishing the service required and position reporting;
(3) method of reporting conflicting traffic;
(4) terrain clearance.

**EXERCISE 9: PRE-FLIGHT AND AERODROME DEPARTURE AND ARRIVAL PROCEDURES**

(a) Long briefing objectives:

(1) determining the serviceability of the radio equipment;
(2) navigation equipment;
(3) obtaining the departure clearance;
(4) setting up radio navaids before take-off for example VOR frequencies, required radials, etc.;
(5) aerodrome departure procedures, frequency changes;
(6) altitude and position reporting as required;
(7) SID procedures;
(8) obstacle clearance considerations.

(b) Air exercise:
(1) radio equipment serviceability checks;
(2) departure clearance;
(3) navaid selection;
(4) frequencies, radials, etc.;
(5) aerodrome departure checks, frequency changes, altitude and position reports;
(6) SID procedures.

**EXERCISE 10: INSTRUMENT APPROACH: PRECISION APPROACH AID TO SPECIFIED MINIMA AND MISSED APPROACH PROCEDURES**

(a) Long briefing objectives:
(1) precision approach charts;
(2) approach to the initial approach fix and minimum sector altitude;
(3) navaid requirements, for example radar, ADF, etc.;
(4) communication (ATC liaison and R/T phraseology);
(5) holding procedure;
(6) the final approach track;
(7) forming a mental picture of the approach;
(8) completion of aerodrome approach checks;
(9) initial approach procedure;
(10) selection of the ILS frequency and identification;
(11) obstacle clearance altitude or height;
(12) operating minima;
(13) achieving the horizontal and vertical patterns;
(14) assessment of distance, groundspeed time, and rate of descent from the final approach fix to the aerodrome;
(15) use of DME (as applicable);
(16) go-around and missed approach procedure;
(17) review of the published instructions;
(18) transition from instrument to visual flight (sensory illusions);
(19) visual manoeuvring after an instrument approach;
   (i) circling approach;
   (ii) visual approach to landing.
(b) Air exercise:
   (1) initial approach to the ILS;
   (2) completion of approach planning;
   (3) holding procedure;
   (4) frequency selection and identification of ILS;
   (5) review of the published procedure and minimum sector altitude;
   (6) communication (ATC liaison and R/T phraseology);
   (7) determination of operating minima and altimeter setting;
   (8) weather consideration, for example cloud base and visibility;
   (9) availability of landing site lighting;
   (10) ILS entry methods;
   (11) radar vectors;
   (12) procedural method;
   (13) assessment of approach time from the final approach fix to the aerodrome;
   (14) determination of:
       (i) the descent rate on final approach;
       (ii) the wind velocity at the surface and the length of the landing site;
       (iii) the obstruction heights to be borne in mind during visual manoeuvring after an instrument approach;
   (15) circling approach;
   (16) the approach:
(i) at the final approach fix;
(ii) use of DME (as applicable);
(iii) ATC liaison;
(iv) note time and establish air speed and descent rate;
(v) maintaining the localizer and glide path;
(vi) anticipation in change of wind velocity and its effect on drift;
(vii) decision height.

(17) landing direction;
(18) go-around and missed approach procedure;
(19) transition from instrument to visual flight;
(20) circling approach;
(21) visual approach to landing.

**EXERCISE 11: INSTRUMENT APPROACH: NON-PRECISION APPROACH TO SPECIFIED MINIMA AND MISSED APPROACH PROCEDURES**

(a) Long briefing objectives:

(1) non-precision approach charts;
(2) initial approach to the initial approach fix and minimum sector altitude;
(3) ATC liaison;
(4) communication (ATC procedures and R/T phraseology);
(5) approach planning;
(6) holding procedure;
(7) the approach track;
(8) forming a mental picture of the approach;
(9) initial approach procedure;
(10) operating minima;
(11) completion of approach planning;
(12) achieving the horizontal and vertical patterns;
(13) assessment of distance, groundspeed time, and rate of descent from the final approach fix to the aerodrome;

(14) use of DME (as applicable);

(15) go-around and missed approach procedure;

(16) review of the published instructions;

(17) transition from instrument to visual flight (sensory illusions);

(18) visual manoeuvring after an instrument approach;

(19) circling approach;

(20) visual approach to landing.

(b) Air exercise:

(1) completion of approach planning, including determination of:
   (i) descent rate from the final approach fix;
   (ii) the wind velocity at the surface and length of the landing site;
   (iii) the obstruction heights to be borne in mind during visual manoeuvring after an instrument approach.

(2) circling approach;

(3) go-around and missed approach procedure;

(4) initial approach;

(5) frequency selection and identification;

(6) review of the published procedure and minimum safe sector altitude;

(7) ATC liaison and R/T phraseology;

(8) determination of decision height and altimeter setting;

(9) weather considerations, for example cloud base and visibility;

(10) availability of landing site lighting;

(11) determination of inbound track;

(12) assessment of time from final approach fix to the missed approach point;
(13) ATC liaison;
(14) the outbound procedure (incl. completion of pre-landing checks);
(15) the inbound procedure;
(16) re-check of identification code;
(17) altimeter setting re-checked;
(18) the final approach;
(19) note time and establish air speed and descent rate;
(20) maintaining the final approach track;
(21) anticipation of change in wind velocity and its effect on the drift;
(22) minimum descent altitude or height;
(23) landing site direction;
(24) go-around and missed approach procedure;
(25) transition from instrument to visual flight (sensory illusions);
(26) visual approach.

**EXERCISE 12: USE OF GNSS (to be developed)**

(a) Long briefing objectives: use of GNSS.
(b) Air exercise: use of GNSS.

**C. AIRSHIPS**

**LONG BRIEFINGS AND AIR EXERCISES**

**EXERCISE 1: INSTRUMENT FLYING (Basic)**

(for revision as deemed necessary by the instructor)

(a) Long briefing objectives:

(1) flight instruments;
(2) physiological considerations;
(3) instrument appreciation:
   (i) attitude instrument flight;
   (ii) pitch indications;
(iii) different instrument presentations;
(iv) introduction to the use of the attitude indicator;
(v) pitch attitude;
(vi) maintenance of heading and balanced flight;
(vii) instrument limitations (inclusive system failures).

(4) attitude, power and performance:
   (i) attitude instrument flight;
   (ii) control instruments;
   (iii) performance instruments;
   (iv) effect of changing power, trim and configuration;
   (v) cross-checking the instrument indications;
   (vi) instrument interpretation;
   (vii) direct and indirect indications (performance instruments);
   (viii) instrument lag;
   (ix) selective radial scan.

(5) the basic flight manoeuvres (full panel):
   (i) straight and level flight at various air speeds and airship configurations;
   (ii) climbing;
   (iii) descending;
   (iv) standard rate turns;
   (v) level, climbing and descending on to pre-selected headings.

(b) Air exercise:
   (1) physiological sensations;
   (2) instrument appreciation;
   (3) attitude instrument flight;
   (4) pitch attitude;
(5) bank attitude;
(6) maintenance of heading and balanced flight;
(7) attitude instrument flight;
(8) effect of changing power and configuration;
(9) cross-checking the instruments;
(10) selective radial scan;
(11) the basic flight manoeuvres (full panel):
   (i) straight and level flight at various air speeds and airship configurations;
   (ii) climbing;
   (iii) descending;
   (iv) standard rate turns;
   (v) level, climbing and descending on to pre-selected headings.

**EXERCISE 2: INSTRUMENT FLYING (Advanced)**

(a) Long briefing objectives:
   (1) full panel;
   (2) unusual attitudes: recoveries;
   (3) transference to instruments after take-off;
   (4) limited panel;
   (5) basic flight manoeuvres;
   (6) unusual attitudes: recoveries.

(b) Air exercise:
   (1) full panel;
   (2) unusual attitudes: recoveries;
   (3) limited panel;
   (4) repeat of the above exercises.

**EXERCISE 3: RADIO NAVIGATION (APPLIED PROCEDURES): USE OF VOR**
(a) Long briefing objectives:

(1) availability of VOR stations en-route;
(2) station frequencies and identification;
(3) signal reception range;
(4) effect of altitude;
(5) VOR radials;
(6) use of OBS;
(7) to or from indicator;
(8) orientation;
(9) selecting radials;
(10) intercepting a pre-selected radial;
(11) assessment of distance to interception;
(12) effects of wind;
(13) maintaining a radial;
(14) tracking to and from a VOR station;
(15) procedure turns;
(16) station passage;
(17) use of two stations for obtaining a fix;
(18) pre-selecting fixes along a track;
(19) assessment of ground speed and timing;
(20) holding procedures;
(21) various entries;
(22) communication (R/T procedures and ATC liaison).

(b) Air exercise:

(1) station selection and identification;
(2) orientation;
(3) intercepting a pre-selected radial;
(4) R/T procedures and ATC liaison;
(5) maintaining a radial inbound;
(6) recognition of station passage;
(7) maintaining a radial outbound;
(8) procedure turns;
(9) use of two stations to obtain a fix along the track;
(10) assessment of ground speed and timing;
(11) holding procedures and entries;
(12) holding at a pre-selected fix;
(13) holding at a VOR station.

**EXERCISE 4: RADIO NAVIGATION (APPLIED PROCEDURES): USE OF ADF**

(Automatic DF equipment)

(a) Long briefing objectives:

(1) availability of NDB facilities en-route;
(2) location, frequencies, tuning (as applicable) and identification codes;
(3) signal reception range;
(4) static interference;
(5) night effect;
(6) station interference;
(7) mountain effect;
(8) coastal refraction;
(9) orientation in relation to an NDB;
(10) homing;
(11) intercepting a pre-selected magnetic bearing and tracking inbound;
(12) station passage;
(13) tracking outbound;
(14) time and distance checks;
(15) use of two NDBs to obtain a fix or alternatively use of one NDB and one other navaid;
(16) holding procedures and various approved entries;
(17) Communication (R/T procedures and ATC liaison).

(b) Air exercise:

(1) selecting, tuning and identifying an NDB;
(2) ADF orientation;
(3) communication (R/T procedures and ATC liaison);
(4) homing;
(5) tracking inbound;
(6) station passage;
(7) tracking outbound;
(8) time and distance checks;
(9) intercepting a pre-selected magnetic bearing;
(10) determining the airship’s position from two NDBs or alternatively from one NDB and one other navaid;
(11) ADF holding procedures and various approved entries.

EXERCISE 5: RADIO NAVIGATION (APPLIED PROCEDURES): USE OF VHF/DF

(a) Long briefing objectives:

(1) availability of VHF/DF facilities en-route;
(2) location, frequencies, station call signs and hours of operation;
(3) signal and reception range;
(4) effect of altitude;
(5) communication (R/T procedures and ATC liaison);
(6) obtaining and using types of bearings, for example QTE, QDM, QDR;
(7) homing to a station;
(8) effect of wind;
(9) use of two VHF/DF stations to obtain a fix (or alternatively one VHF/DF station and one other navaid);
(10) assessment of groundspeed and timing.

(b) Air exercise:
(1) establishing contact with a VHF/DF station;
(2) R/T procedures and ATC liaison;
(3) obtaining and using a QDR and QTE;
(4) homing to a station;
(5) effect of wind;
(6) use of two VHF/DF stations to obtain a fix (or alternatively one VHF/DF station and one other navaid);
(7) assessment of groundspeed and timing.

EXERCISE 6: RADIO NAVIGATION (APPLIED PROCEDURES): USE OF DME

(a) Long briefing objectives:
(1) availability of DME facilities;
(2) location, frequencies and identification codes;
(3) signal reception range;
(4) slant range;
(5) use of DME to obtain distance, groundspeed and timing;
(6) use of DME to obtain a fix.

(b) Air exercise:
(1) station selection and identification;
(2) use of equipment functions;
(3) distance;
(4) groundspeed;
(5) Timing
(6) DME arc approach;
(7) DME holding

**EXERCISE 7: RADIO NAVIGATION (APPLIED PROCEDURES): USE OF TRANSPONDERs**

(a) Long briefing objectives:

1. operation of transponders;
2. code selection procedure;
3. emergency codes;
4. precautions when using airborne equipment.

(b) Air exercise:

1. operation of transponders;
2. types of transponders;
3. code selection procedure;
4. emergency codes;
5. precautions when selecting the required code.

**EXERCISE 8: RADIO NAVIGATION (APPLIED PROCEDURES): USE OF EN-ROUTE RADAR SERVICES**

(a) Long briefing objectives:

1. availability of radar services;
2. location, station frequencies, call signs and hours of operation;
3. AIP and NOTAMS;
4. provision of service;
5. communication (R/T, procedures and ATC liaison);
6. airspace radar advisory service;
7. emergency service;
8. aircraft separation standards.

(b) Air exercise:

1. communication (R/T procedures and ATC liaison);
2. establishing the service required and position reporting;
(3) method of reporting conflicting traffic;

(4) terrain clearance.

**EXERCISE 9: PRE-FLIGHT AND AERODROME DEPARTURE AND ARRIVAL PROCEDURES**

(a) Long briefing objectives:

(1) determining the serviceability of the airship radio;
(2) navigation equipment;
(3) obtaining the departure clearance;
(4) setting up radio nav aids before take-off for example VOR frequencies, required radials, etc.;
(5) aerodrome departure procedures, frequency changes;
(6) altitude and position reporting as required;
(7) SID procedures;
(8) obstacle clearance considerations.

(b) Air exercise:

(1) radio equipment serviceability checks;
(2) departure clearance;
(3) nav aid selection;
(4) frequencies, radials, etc.;
(5) aerodrome departure checks, frequency changes, altitude and position reports;
(6) SID procedures.

**EXERCISE 10: INSTRUMENT APPROACHES: ILS APPROACHES TO SPECIFIED MINIMA AND MISSED APPROACHES PROCEDURES**

(a) Long briefing objectives:

(1) precision approach charts;
(2) approach to the initial approach fix and minimum sector altitude;
(3) nav aid requirements, for example radar, ADF, etc.;
(4) communication (ATC liaison and R/T phraseology);
(5) review;
(6) holding procedure;
(7) the final approach track;
(8) forming a mental picture of the approach;
(9) completion of aerodrome approach checks;
(10) initial approach procedure;
(11) selection of the ILS frequency and identification;
(12) obstacle clearance altitude or height;
(13) operating minima;
(14) achieving the horizontal and vertical patterns;
(15) assessment of distance, groundspeed time, and rate of descent from the final approach fix to the aerodrome;
(16) use of DME (as applicable);
(17) go-around and missed approach procedure;
(18) review of the published instructions;
(19) transition from instrument to visual flight (sensory illusions);
(20) visual manoeuvring after an instrument approach;
  (i) circling approach;
  (ii) visual approach to landing.

(b) Air exercise:
(1) initial approach to the ILS;
(2) completion of approach planning;
(3) holding procedure;
(4) frequency selection and identification of ILS;
(5) review of the published procedure and minimum sector altitude;
(6) communication (ATC liaison and R/T phraseology);
(7) determination of operating minima and altimeter setting;

(8) weather consideration, for example cloud base and visibility;

(9) availability of runway lighting;

(10) ILS entry methods;

(11) radar vectors;

(12) procedural method;

(13) assessment of approach time from the final approach fix to the aerodrome;

(14) determination of:

   (i) the descent rate on final approach;

   (ii) the wind velocity at the surface (and the length of the landing runway);

   (iii) the obstruction heights to be borne in mind during visual manoeuvring after an instrument approach;

(15) circling approach;

(16) the approach:

   (i) at the final approach fix;

   (ii) use of DME (as applicable);

   (iii) ATC liaison;

   (iv) note time and establish air speed and descent rate;

   (v) maintaining the localiser and glide path;

   (vi) anticipation in change of wind velocity and its effect on drift;

   (vii) decision height;

   (viii) runway direction.

(17) missed approach procedure;

(18) transition from instrument to visual flight;

(19) circling approach;

(20) visual approach to landing.
EXERCISE 11: INSTRUMENT APPROACHES: NDB APPROACHES TO SPECIFIED MINIMA AND MISSED APPROACHES PROCEDURE

(a) Long briefing objectives:

(1) non-precision approach charts;
(2) initial approach to the initial approach fix and minimum sector altitude;
(3) ATC liaison;
(4) communication (ATC procedures and R/T phraseology);
(5) approach planning:
   (i) holding procedure;
   (ii) the approach track;
   (iii) forming a mental picture of the approach;
   (iv) initial approach procedure;
   (v) operating minima;
   (vi) Completion of approach planning.
(6) achieving the horizontal and vertical patterns;
(7) assessment of distance, groundspeed time, and rate of descent from the final approach fix to the aerodrome;
(8) use of DME (as applicable);
(9) go-around and missed approach procedure;
(10) review of the published instructions;
(11) transition from instrument to visual flight (sensory illusions);
(12) visual manoeuvring after an instrument approach;
(13) circling approach;
(14) visual approach to landing.

(b) Air exercise:

(1) completion of approach planning including;
(2) determination of:
   (i) descent rate from the final approach fix;
(ii) the wind velocity at the surface and length of the landing runway;

(iii) the obstruction heights to be borne in mind during visual manoeuvring after an instrument approach.

(3) circling approach;

(4) go-around and missed approach procedure;

(5) initial approach;

(6) frequency selection and identification;

(7) review of the published procedure and minimum safe sector altitude;

(8) ATC liaison and R/T phraseology;

(9) determination of decision height and altimeter setting;

(10) weather considerations, for example cloud base and visibility;

(11) availability of runway lighting;

(12) determination of inbound track;

(13) assessment of time from final approach fix to the missed approach point;

(14) ATC liaison;

(15) The outbound procedure (inclusive completion of pre-landing checks);

(16) the inbound procedure;

(17) re-check of identification code;

(18) altimeter setting re-checked;

(19) the final approach;

(20) note time and descent rate;

(21) maintaining the final approach track;

(22) anticipation of change in wind velocity and its effect on the drift;

(23) minimum descent altitude or height;

(24) runway direction;
(25) go-around and missed approach procedure;

(26) transition from instrument to visual flight (sensory illusions);

(27) visual approach.

**EXERCISE 12: RADIO NAVIGATION (APPLIED PROCEDURES): USE OF GNNS (to be developed)**

(a) Long briefing objectives: use of GNSS.

(b) Air exercise: use of GNSS.

**AMC1 MFCL.930.MCCI — Training course**

**AEROPLANES**

**GENERAL**

(a) The objective of the technical training is to apply the core instructor competencies acquired during the teaching and learning training to MCC training.

(b) During the practical training the applicant should demonstrate the ability to instruct a pilot in MCC.

(c) To supervise applicants for MCCI certificates, the adequate experience should include at least three type rating or MCC courses.

(d) It is to be noted that airmanship is a vital ingredient of all flight operations. Therefore, in the following air exercises the relevant aspects of airmanship are to be stressed at the appropriate times during each flight.

(e) The student instructor should learn how to identify common errors and how to correct them properly, which should be emphasised at all times.

**COURSE OBJECTIVE**

(f) The course should be designed to give adequate training to the applicant in theoretical knowledge instruction and FSTD instruction to instruct those aspects of MCC required by an applicant for a type rating on a first MP aeroplane.

(g) Confirmation of competency of the applicant to be authorised as an MCCI(A) will be determined by the applicant conducting at least 3 hours MCC instruction to a satisfactory standard on the relevant FNPT or FFS under the supervision of a TRI(A), SFI(A) or MCCI(A) nominated by the ATO for this purpose.

(h) The course consists of three parts:

(1) Part 1: teaching and learning that should follow the content of AMC1 MFCL.920;

(2) Part 2: technical theoretical knowledge instruction (technical training);
(3) Part 3: flight instruction.

Part 1

The content of the teaching and learning part of the FI training course, as established in AMCI MFCL.930.FI, should be used as guidance to develop the course syllabus.

Part 2

TECHNICAL THEORETICAL KNOWLEDGE INSTRUCTION SYLLABUS

(a) The FSTD training consists of the application of core instructor competencies to MCC training in a commercial air transport environment, including principles of threat and error management and CRM.

The content of the training programme should cover MCC course exercises in sufficient depth to meet the standard required for issue of the MCCI (A) certificate.

(b) The course should be related to the type of FSTD on which the applicant wishes to instruct. A training programme should give details of all theoretical knowledge instruction.

(c) Identification and application of human factors (as set in the ATPL syllabus 040) related to MCC aspects of the training.

Part 3

FLIGHT INSTRUCTION SYLLABUS

(a) The content of the instruction programme should cover training exercises as applicable to the MCC requirements of an applicant for a MP type rating.

(b) Training exercises:

The exercises should be accomplished as far as possible in a simulated commercial air transport environment. The instruction should cover the following areas:

(1) pre-flight preparation, including documentation, and computation of take-off performance data;

(2) pre-flight checks, including radio and navigation equipment checks and setting;

(3) before take-off checks, including powerplant checks, and take-off briefing by the PF;

(4) normal take-offs with different flap settings, tasks of PF and PNF, call-outs;

(5) rejected take-offs; crosswind take-offs; take-offs at maximum take-off mass; engine failure after v1;
(6) normal and abnormal operation of aircraft systems, use of checklists;

(7) selected emergency procedures to include engine failure and fire, smoke control and removal, windshear during take-off and landing, emergency descent, incapacitation of a flight crew member;

(8) early recognition of and reaction on approaching stall in differing aircraft configurations;

(9) instrument flight procedures, including holding procedures; precision approaches using raw navigation data, flight director and automatic pilot, one engine simulated inoperative approaches, non-precision and circling approaches, approach briefing by the PF, setting of navigation equipment, call-out procedures during approaches; computation of approach and landing data;

(10) go-arounds; normal and with one engine simulated inoperative, transition from instrument to visual flight on reaching decision height or minimum descent height or altitude;

(11) landings, normal, crosswind and with one engine simulated inoperative, transition from instrument to visual flight on reaching decision height or minimum descent height or altitude.
CHAPTER K — EXAMINERS

GM1 MFCL.1000 Examiner certificates

SPECIAL CONDITIONS

When new aircraft are introduced, requirements such as to hold a license and rating equivalent to the one for which the skill test is being conducted, or to have adequate flight experience, may not be possible to comply with. In this case, to allow for the first ratings for these aircraft to be issued to applicants, competent authorities need the possibility to issue a specific certificate that does not have to comply with the requirements established in this Subpart.

The Authority should only give these certificates to holders of other examiner certificates. As far as possible, preference should be given to persons with experience in similar types or classes of aircraft, for example, in aircraft having the same kind and number of engines or rotors and of the same order of mass or technology.

The certificate should ideally be limited in validity to the time needed to qualify the first examiners for the new aircraft in accordance with this chapter, but in any case it should not exceed the 3 years established in the rule.

GM1 MFCL.1005 (b) Limitation of privileges in case of vested interests

Examples of a situation where the examiner should consider if his/her objectivity is affected are when the applicant is a relative or a friend of the examiner, or when they are linked by economical interests or political affiliations, etc.
AMC1 MFCL.1010 Prerequisites for examiners

When evaluating the applicant’s background, the competent authority should evaluate the personality and character of the applicant, and his/her cooperation with the Authority.

The Authority may also take into account whether the applicant has been convicted of any relevant criminal or other offenses, taking into account national law and principles of non-discrimination.

AMC1 MFCL.1015 Examiner standardisation

GENERAL

(a) The Authority may provide the course itself or through an arrangement with an ATO. This arrangement should clearly state that the ATO is acting under the management system of the Authority.

(b) The course should last:

(1) for the FE and FIE, at least 1 day, divided into theoretical and practical training;

(2) for other examiners, at least 3 days, divided into theoretical training (1 day) and practical training in an FFS conducting role played proficiency checks and skill tests (at least 2 days).

(c) The Authority or the ATO should determine any further training required before presenting the candidate for the examiner assessment of competence.

CONTENT

(d) The training should comprise:

(1) Theoretical training covering at least:

   (i) the contents of AMC2 MFCL.1015 and the FEM;

   (ii) Part-MFCL and related AMCs and GM relevant to their duties;

   (iii) operational requirements and related AMCs and GM relevant to their duties;

   (iv) national requirements relevant to their examination duties;

   (v) fundamentals of human performance and limitations relevant to flight examination;

   (vi) fundamentals of evaluation relevant to applicant’s performance;

   (vii) management system of ATOs;

   (viii) MCC, human performance and limitations, if applicable.

(2) Examiners should also be briefed on the protection requirements for
personal data, liability, accident insurance and fees, as applicable in
the member state concerned.

(3) All items above are the core knowledge requirements for an examiner and
are recommended as the core course material. This core course may be
studied before recommended examiner training is commenced. The core
course may utilise any suitable training format.

(4) Practical training consisting of at least:

(i) Knowledge and management of the test for which the
certificate is to be sought. These are described in the relevant
modules in the FEM;

(ii) Knowledge of the administrative procedures pertaining to that
test or check.

(5) For an initial examiner certificate, practical training should include
the examination of the test profile sought, consisting of the conduct
of at least two test or check profiles in the role of examiner (these
two tests or checks profiles can be performed in the same simulator
session), including briefing, conduct of the skill test and proficiency
check, assessment of the applicant to whom the test or check is
given, debriefing and recording or documentation under the
supervision of an examiner of the appropriate category on the
applicable type. This training is conducted in the aircraft if approval
for testing or checking in the aircraft is required. If examiner
privileges in FSTD’s are required, practical instruction in the use of
FSTD(s) for testing or checking should also be completed.

(6) If examiner privileges are to include the conduct of proficiency checks for
the revalidation or renewal of an instrument rating, practical instruction
should include the conduct of at least four instrument check profiles in
the role of examiner, including briefing, conduct of the skill test and
proficiency check, assessment of the applicant to whom the test or check
is given, debriefing and recording or documentation under the supervision
of an examiner of the appropriate category on the applicable type. This
training is conducted in the aircraft if approval for testing or checking in
the aircraft is required. If examiner privileges in both FSTD and aircraft
are required, at least one of the instrument check profiles should be
conducted in an FSTD.

(7) For extension of an examiner certificate to further types (as
required for TRE), further practical training on the new type may be
required, consisting of the conduct of at least one test or check profile
in the role of examiner on the new type, including briefing, conduct of
the skill test and proficiency check, assessment of the applicant to
whom the test or check is given, debriefing and recording or
documentation under the supervision of an examiner of the
appropriate category on the applicable type. A further examiner check
on the new type may be required, which may be supervised by an
inspector of the Authority or a suitably authorised senior examiner.

AMC2 MFCL.1015 Examiner standardisation
STANDARDISATION ARRANGEMENTS FOR EXAMINERS LIMITATIONS
(a) An examiner should allow an applicant adequate time to prepare for a test or check, normally not more than 1 hour.

(b) An examiner should plan a test or check flight so that all required exercises can be performed while allowing sufficient time for each of the exercises and with due regard to the weather conditions, traffic situation, ATC requirements and local procedures.

**PURPOSE OF A TEST OR CHECK**

(c) Determine through practical demonstration during a test or check that an applicant has acquired or maintained the required level of knowledge and skill or proficiency.

(d) Improve training and flight instruction in ATOs by feedback of information from examiners about items or sections of tests or checks that are most frequently failed.

(e) Assist in maintaining and, where possible, improving air safety standards by having examiners display good airmanship and flight discipline during tests or checks.

**CONDUCT OF TEST OR CHECK**

(f) An examiner will ensure that an applicant completes a test or check in accordance with MFCL requirements and is assessed against the required test or check standards.

(g) Each item within a test or check section should be completed and assessed separately. The test or check schedule, as briefed, should not normally be altered by an examiner. A failed item is not always a failed section, for example type rating skill test where a failure of an item in a section does not fail the entire section, only the failed item is taken again.

(h) Marginal or questionable performance of a test or check item should not influence an examiner’s assessment of any subsequent items.

(i) An examiner should verify the requirements and limitations of a test or check with an applicant during the pre-flight briefing.

(j) When a test or check is completed or discontinued, an examiner should debrief the applicant and give reasons for items or sections failed. In case of a failed or discontinued skill test and proficiency check, the examiner should provide appropriate advice to assist the applicant in re-tests or re-checks.

(k) Any comment on, or disagreement with, an examiner’s test or check evaluation or assessment made during a debriefing will be recorded by the examiner on the test or check report, and will be signed by the examiner and countersigned by the applicant.

**EXAMINER PREPARATION**

(l) An examiner should supervise all aspects of the test or check flight preparation, including, where necessary, obtaining or assuring an ATC ‘slot’ time.
(m) An examiner will plan a test or check in accordance with Part-MFCL requirements. Only the manoeuvres and procedures set out in the appropriate test or check form will be undertaken. The same examiner should not re-examine a failed applicant without the agreement of the applicant.

EXAMINER APPROACH

(n) An examiner should encourage a friendly and relaxed atmosphere to develop both before and during a test or check flight. A negative or hostile approach should not be used. During the test or check flight, the examiner should avoid negative comments or criticisms and all assessments should be reserved for the debriefing.

ASSESSMENT SYSTEM

(o) Although test or checks may specify flight test tolerances, an applicant should not be expected to achieve these at the expense of smoothness or stable flight. An examiner should make due allowance for unavoidable deviations due to turbulence, ATC instructions, etc. An examiner should terminate a test or check only when it is clear that the applicant has not been able to demonstrate the required level of knowledge, skill or proficiency and that a full re-test will be necessary or for safety reasons. An examiner will use one of the following terms for assessment:

(1) a ‘pass’, provided that the applicant demonstrates the required level of knowledge, skill or proficiency and, where applicable, remains within the flight test tolerances for the license or rating;

(2) a ‘fail’ provided that any of the following apply:

(i) the flight test tolerances have been exceeded after the examiner has made due allowance for turbulence or ATC instructions;

(ii) the aim of the test or check is not completed;

(iii) the aim of exercise is completed but at the expense of safe flight, violation of a rule or regulation, poor airmanship or rough handling;

(iv) an acceptable level of knowledge is not demonstrated;

(v) an acceptable level of flight management is not demonstrated;

(vi) the intervention of the examiner or safety pilot is required in the interest of safety.

(3) a ‘partial pass’ in accordance with the criteria shown in the relevant skill test appendix of MFCL.

METHOD AND CONTENTS OF THE TEST OR CHECK

(p) Before undertaking a test or check an examiner will verify that the aircraft or FSTD intended to be used is suitable and appropriately equipped for the test or check.
(q) A test or check flight will be conducted in accordance with the AFM and, if applicable, the AOM.

(r) A test or check flight will be conducted within the limitations contained in the operations manual of an ATO.

(s) Contents:

(1) a test or check is comprised of:

(i) oral examination on the ground (where applicable);
(ii) pre-flight briefing;
(iii) in-flight exercises;
(iv) post-flight debriefing.

(2) oral examination on the ground should include:

(i) aircraft general knowledge and performance;
(ii) planning and operational procedures;
(iii) other relevant items or sections of the test or check.

(3) pre-flight briefing should include:

(i) test or check sequence;
(ii) power setting, speeds and approach minima, if applicable;
(iii) safety considerations.

(4) in-flight exercises will include each relevant item or section of the test or check;

(5) post-flight debriefing should include:

(i) assessment or evaluation of the applicant;
(ii) documentation of the test or check with the applicant’s FI present, if possible.

(t) A test or check is intended to simulate a practical flight. Thus, an examiner may set practical scenarios for an applicant while ensuring that the applicant is not confused and air safety is not compromised.

(u) When manoeuvres are to be flown by sole reference to instruments, the examiner should ensure that a suitable method of screening is used to simulate IMC.

(v) An examiner should maintain a flight log and assessment record during the test
or check for reference during the post or flight debriefing.

(w) An examiner should be flexible to the possibility of changes arising to pre-flight briefings due to ATC instructions, or other circumstances affecting the test or check.

(x) Where changes arise to a planned test or check an examiner should be satisfied that the applicant understands and accepts the changes. Otherwise, the test or check flight should be terminated.

(y) Should an applicant choose not to continue a test or check for reasons considered inadequate by an examiner, the applicant will be assessed as having failed those items or sections not attempted. If the test or check is terminated for reasons considered adequate by the examiner, only these items or sections not completed will be tested during a subsequent test or check.

(z) An examiner may terminate a test or check at any stage, if it is considered that the applicant’s competency requires a complete re-test or re-check.
GM1 MFCL.1015 Examiner standardisation

(a) An examiner should plan per day not more than:
(1) three tests or checks relating to PPL, CPL, IR or class ratings;
(2) four tests or checks relating to LAPL, SPL or BPL;
(3) two tests or checks related to CPL, IR or ATPL;
(4) two assessments of competence related to instructor certificates;
(5) four tests or checks relating to SP type ratings.

(b) An examiner should plan at least 2 hours for a LAPL, SPL or BPL, 3 hours for a PPL, CPL, IR or class rating test or checks, and at least 4 hours for FI, CPL, IR, MPL, ATPL or MP type rating tests or checks, including pre-flight briefing and preparation, conduct of the test, check or assessment of competence, de-briefing, evaluation of the applicant and documentation.

(c) When planning the duration of a test, check or assessment of competence, the following values may be used as guidance:
(1) 45 minutes for a LAPL(B) or BPL and SP class ratings VFR only;
(2) 90 minutes for LAPL(A) or (H), PPL and CPL, including navigation section;
(3) 60 minutes for IR, FI and SP type or class ratings;
(4) 120 minutes for CPL, MPL, ATPL and MP type ratings.

(d) For the LAPL(S) and SPL test or check flight the flight time must be sufficient to allow that all the items in each test or check section can be fully completed. If not all the items can be completed in one flight, additional flights have to be done.
**AMC1 MFCL.1020 Examiners assessment of competence**

**GENERAL**

(a) The Authority may nominate either one of its inspectors or a senior examiner to assess the competence of applicants for an examiner certificate.

**DEFINITIONS**

(b) Definitions:
   (1) ‘Inspector’: the inspector of the Authority conducting the examiner competence assessment;
   (2) ‘Examiner applicant’: the person seeking certification as an examiner;
   (3) ‘Candidate’: the person being tested or checked by the examiner applicant. This person may be a pilot for whom the test or check would be required, or the inspector of the Authority who is conducting the examiner certification acceptance test.

**CONDUCT OF THE ASSESSMENT**

(c) An inspector of the Authority or a senior examiner will observe all examiner applicants conducting a test on a ‘candidate’ in an aircraft for which examiner certificate is sought. Items from the related training course and test or check schedule will be selected by the inspector for examination of the ‘candidate’ by the examiner applicant. Having agreed with the inspector the content of the test, the examiner applicant will be expected to manage the entire test. This will include briefing, the conduct of the flight, assessment and debriefing of the ‘candidate’. The inspector will discuss the assessment with the examiner applicant before the ‘candidate’ is debriefed and informed of the result.

**BRIEFING THE ‘CANDIDATE’**

(d) The ‘candidate’ should be given time and facilities to prepare for the test flight. The briefing should cover the following:

   (1) the objective of the flight;
   (2) licensing checks, as necessary;
   (3) freedom for the ‘candidate’ to ask questions;
   (4) operating procedures to be followed (for example operators manual);
   (5) weather assessment;
   (6) operating capacity of ‘candidate’ and examiner;
   (7) aims to be identified by ‘candidate’;
   (8) simulated weather assumptions (for example icing and cloud base);
   (9) use of screens (if applicable);
(10) contents of exercise to be performed;

(11) agreed speed and handling parameters (for example V-speeds, bank angle, approach minima);

(12) use of R/T;

(13) respective roles of ‘candidate’ and examiner (for example during emergency);

(14) administrative procedures (for example submission of flight plan).

(e) The examiner applicant should maintain the necessary level of communication with the ‘candidate’. The following check details should be followed by the examiner applicant:

(1) involvement of examiner in a MP operating environment;

(2) the need to give the ‘candidate’ precise instructions;

(3) responsibility for safe conduct of the flight;

(4) intervention by examiner, when necessary;

(5) use of screens;

(6) liaison with ATC and the need for concise, easily understood intentions;

(7) prompting the ‘candidate’ about required sequence of events (for example following a go-around);

(8) keeping brief, factual and unobtrusive notes.

ASSESSMENT

(f) The examiner applicant should refer to the flight test tolerances given in the relevant skill test. Attention should be paid to the following points:

(1) questions from the ‘candidate’;

(2) give results of the test and any sections failed;

(3) give reasons for failure.

DEBRIEFING

(g) The examiner applicant should demonstrate to the inspector the ability to conduct a fair, unbiased debriefing of the ‘candidate’ based on identifiable factual items. A balance between friendliness and firmness should be evident. The following points should be discussed with the ‘candidate’, at the applicant’s discretion:
(1) advise the candidate on how to avoid or correct mistakes;

(2) mention any other points of criticism noted;

(3) give any advice considered helpful.

RECORDING OR DOCUMENTATION

(h) The examiner applicant should demonstrate to the inspector the ability to complete the relevant records correctly. These records may be:

(1) The relevant test or check form

(2) Notification of failure form

(3) Relevant company forms where the examiner has privileges conducting operator proficiency

DEMONSTRATION OF THEORETICAL KNOWLEDGE

(i) The examiner applicant should demonstrate to the inspector a satisfactory knowledge of the regulatory requirements associated with the function of an examiner.

AMC1 MFCL.1020; MFCL.1025

QUALIFICATION OF SENIOR EXAMINERS

(a) A senior examiner specifically tasked by the Authority to observe skill tests or proficiency checks for the revalidation of examiner certificates should:

(1) hold a valid or current examiner certificate appropriate to the privileges being given;

(2) have examiner experience level acceptable to the Authority;

(3) have conducted a number of skill tests or proficiency checks as a MFCL examiner.

(b) The Authority may conduct a pre-assessment of the applicant or candidate carrying out a skill test and proficiency check under supervision of an inspector of the Authority.

(c) Applicants should be required to attend a senior examiner briefing, course or seminar arranged by the Authority. Content and duration will be determined by the Authority and should include:

(1) pre-course self-study;

(2) legislation;

(3) the role of the senior examiner;

(4) an examiner assessment;
(5) national administrative requirements.

(d) The validity of the authorisation should not exceed the validity of the examiners certificate, and in any case should not exceed 3 years. The authorisation may be revalidated in accordance with procedures established by the Authority.

AMC1 MFCL.1025 Validity, revalidation and renewal of examiner certificates

EXAMINER REFRESHER SEMINAR

The examiner refresher seminar should follow the content of the examiner standardisation course, included in AMC1 MFCL.1015, and take into account specific contents adequate to the category of examiner affected.

AMC1 MFCL.1030 (b) (3) Conduct of skill tests, proficiency checks and assessments of competence

OBLIGATIONS FOR EXAMINERS APPLICATION AND REPORT FORMS

Common application and report forms can be found:

(a) For skill tests or proficiency checks for issue, revalidation or renewal of LAPL, BPL, SPL, PPL, CPL and IR in AMC1 to Appendix 7;

(b) For training, skill tests or proficiency checks for ATPL, MPL or class and type ratings, in AMC1 to Appendix 9;

(c) For assessments of competence for instructors, in AMC5 MFCL.935.
Appendices

AMC1 to Appendix 3  Training courses for the issue of a CPL and an ATPL

GENERAL

(a) When ensuring that the applicant complies with the prerequisites for the course, the ATO should check that the applicant has enough knowledge of mathematics, physics and English to facilitate the understanding of the theoretical knowledge instruction content of the course.

(b) Whenever reference is made to a certain amount of hours of training, this means a full hour. Time not directly assigned to training (such as breaks, etc.) is not to be counted towards the total amount of time that is required.

A. ATP integrated course: aeroplanes

(a) The ATP integrated course should last between 12 and 36 months. This period may be extended where additional flying training or ground instruction is provided by the ATO.

CREDITING

(b) Credit for previous experience given to an applicant who already holds a PPL should be entered into the applicant's training record. In the case of a student pilot who does not hold a pilot license and with the approval of the Authority, an ATO may designate certain dual exercises to be flown in a helicopter or a TMG up to a maximum of 20 hours.

THEORETICAL KNOWLEDGE

(c) The 750 hours of instruction can include classroom work, interactive video, slide or tape presentation, learning carrels, computer-based training, and other media as approved by the competent authority, in suitable proportions. The 750 hours of instruction should be divided in such a way that in each subject the minimum hours are:

Other subdivision of hours may be agreed upon between the Authority and the ATO.

FLYING TRAINING

(d) The flying instruction is divided into five phases:
(1) phase 1:
Exercises up to the first solo flight comprise a total of at least 10 hours dual flight instruction on an SE aeroplane including:

(i) pre-flight operations, mass and balance determination, aeroplane inspection and servicing;

(ii) aerodrome and traffic pattern operations, collision avoidance and precautions;

(iii) control of the aeroplane by external visual references;

(iv) normal take-offs and landings;

(v) flight at critically low air speeds, recognition of recovery from incipient and full stalls, spin avoidance;

(vi) unusual attitudes and simulated engine failure.

(2) phase 2:
Exercises up to the first solo cross-country flight comprise a total of at least 10 hours of dual flight instruction and at least 10 hours solo flight including:

(i) maximum performance (short field and obstacle clearance) take-offs and short-field landings;

(ii) flight by reference solely to instruments, including the completion of a 180° turn;

(iii) dual cross-country flying using external visual references, DR and radio navigation aids, diversion procedures;

(iv) aerodrome and traffic pattern operations at different aerodromes;

(v) crosswind take-offs and landings;

(vi) abnormal and emergency procedures and manoeuvres, including simulated aeroplane equipment malfunctions;

(vii) operations to, from and transiting controlled aerodromes, compliance with ATS procedures, R/T procedures and phraseology;

(viii) knowledge of meteorological briefing arrangements, evaluation of weather conditions for flight and use of AIS.

(3) phase 3:
Exercises up to the VFR navigation progress test comprise a total of at least 5 hours of dual instruction and at least 40 hours as PIC. The dual instruction and testing up to the VFR navigation progress test should comprise:
(i) repetition of exercises of phases 1 and 2;

(ii) VFR flight at relatively critical high air speeds, recognition of and recovery from spiral dives;

(iii) VFR navigation progress test conducted by an FI not connected with the applicant’s training;

(iv) night flight time including take-offs and landings as PIC.

(4) phase 4:

Exercises up to the instrument rating skill test comprise:

(i) at least 55 hours instrument flight, which may contain up to 25 hours of instrument ground time in an FNPT I or up to 40 hours in an FNPT II or FFS which should be conducted by an FI or an authorised SFI;

(ii) 20 hours instrument time flown as SPIC;

(iii) pre-flight procedures for IFR flights, including the use of the flight manual and appropriate ATS documents in the preparation of an IFR flight plan;

(iv) procedures and manoeuvres for IFR operation under normal, abnormal and emergency conditions covering at least:

   (A) transition from visual to instrument flight on take-off;
   
   (B) SIDs and arrivals;
   
   (C) en-route IFR procedures;
   
   (D) holding procedures;
   
   (E) instrument approaches to specified minima;
   
   (F) missed approach procedures;
   
   (G) landings from instrument approaches, including circling.

   (v) in-flight manoeuvres and specific flight characteristics;

   (vi) operation of an ME aeroplane in the exercises of (iv), including operation of the aeroplane solely by reference to instruments with one engine simulated inoperative, and engine shut-down and restart (the latter training should be at a safe altitude unless carried out in an FSTD).

(5) phase 5:

   (i) instruction and testing in MCC comprise the relevant training
requirements;

(ii) if a type rating for MP aeroplanes is not required on completion of this part, the applicant will be provided with a certificate of course completion for MCC training.

B. ATP modular theoretical knowledge course: aeroplanes

(a) The aim of this course is to train pilots who have not received the theoretical knowledge instruction during an integrated course to the level of theoretical knowledge required for the ATPL.

(b) An approved course should include formal classroom work and may include the use of such facilities as interactive video, slide or tape presentation, learning carrels and computer-based training and other media distance learning (correspondence) courses as approved by the Authority. Approved distance learning (correspondence) courses may also be offered as part of the course.

(c) The ATP modular course should last 18 months. This period may be extended where additional training is provided by the ATO. The flight instruction and skill test need to be completed within the period of validity of the pass in the theoretical examinations.

C. CPL/IR integrated course: aeroplanes

(a) The CPL/IR integrated course should last between 9 and 30 months. This period may be extended where additional flying training or ground instruction is provided by the ATO.

CREDITING

(b) Credit for previous experience given to an applicant who already holds a PPL should be entered into the applicant’s training record. In the case of a student pilot who does not hold a pilot license and with the approval of the Authority, an ATO may designate certain dual exercises to be flown in a helicopter or a TMG up to a maximum of 20 hours.

THEORETICAL KNOWLEDGE

(c) The 500 hours of instruction can include classroom work, interactive video, slide or tape presentation, learning carrels, computer-based training, and other media as approved by the Authority, in suitable proportions. The 500 hours of instruction should be divided in such a way that in each subject the minimum hours are:

(1) Air law  30 hours
(2) Aircraft general knowledge  50 hours
(3) Flight performance and planning  60 hours
(4) Human performance and limitations  15 hours
(5) Meteorology  40 hours
(6) Navigation 100 hours
(7) Operational procedures 10 hours
(8) Principles of flight 25 hours
(9) Communications 30 hours

Other subdivisions of hours may be agreed upon between the Authority and the ATO.

FLYING TRAINING

(d) The flying instruction is divided into four phases:

(1) phase 1:
Exercises up to the first solo flight comprise a total of at least 10 hours dual flight instruction on an SE aeroplane, including:

(i) pre-flight operations, mass and balance determination, aeroplane inspection and servicing;

(ii) aerodrome and traffic pattern operations, collision avoidance and precautions;

(iii) control of the aeroplane by external visual references;

(iv) normal take-offs and landings;

(v) flight at critically low air speeds, recognition of and recovery from incipient and full stalls, spin avoidance;

(vi) unusual attitudes and simulated engine failure.

(2) phase 2:
Exercises up to the first solo cross-country flight comprise a total of at least 10 hours dual flight instruction and at least 10 hours solo flight including:

(i) maximum performance (short field and obstacle clearance) take-offs and short-field landings;

(ii) flight by reference solely to instruments, including the completion of a 180° turn;

(iii) dual cross-country flying using external visual references, DR and radio navigation aids, diversion procedures;

(iv) aerodrome and traffic pattern operations at different aerodromes;

(v) crosswind take-offs and landings;
(vi) abnormal and emergency operations and manoeuvres, including simulated aeroplane equipment malfunctions;

(vii) operations to, from and transiting controlled aerodromes, compliance with ATS procedures, R/T procedures and phraseology;

(viii) knowledge of meteorological briefing arrangements, evaluation of weather conditions for flight and use of AIS.

(3) phase 3:

Exercises up to the VFR navigation progress test comprise a total of at least 5 hours of instruction and at least 40 hours as PIC. The dual instruction and testing up to the VFR navigation progress test and the skill test should contain the following:

(i) repetition of exercises of phases 1 and 2;

(ii) VFR flight at relatively critical high air speeds, recognition of and recovery from spiral dives;

(iii) VFR navigation progress test conducted by an FI not connected with the applicant’s training;

(iv) night flight time including take-offs and landings as PIC.

(4) phase 4:

Exercises up to the instrument rating skill test comprise:

(i) at least 55 hours instrument time, which may contain up to 25 hours of instrument ground time in an FNPT I or up to 40 hours in an FNPT II or FFS which should be conducted by an FI or an authorised SFI;

(ii) 20 hours instrument time flown as SPIC;

(iii) pre-flight procedures for IFR flights, including the use of the flight manual and appropriate ATS documents in the preparation of an IFR flight plan;

(iv) procedures and manoeuvres for IFR operation under normal, abnormal and emergency conditions covering at least:

(A) transition from visual to instrument flight on take-off;

(B) SIDs and arrivals;

(C) en-route IFR procedures;

(D) holding procedures;

(E) instrument approaches to specified minima;
(F) missed approach procedures;

(G) landings from instrument approaches, including circling.

(v) in-flight manoeuvres and particular flight characteristics;

(vi) operation of either an SE or an ME aeroplane in the exercises of (iv), including in the case of an ME aeroplane operation of the aeroplane solely by reference to instruments with one engine simulated inoperative and engine shut-down and restart. The latter exercise is to be conducted at a safe altitude unless carried out in an FSTD.

D. CPL integrated course: aeroplanes

(a) The CPL integrated course should last between 9 and 24 months. This period may be extended where additional flying training or ground instruction is provided by the ATO.

CREDITING

(b) Credit for the hours flown should be entered into the applicant’s training record. In the case of a student pilot who does not hold a pilot license and with the approval of the Authority, an ATO may designate certain dual exercises to be flown in a helicopter or a TMG up to a maximum of 20 hours.

THEORETICAL KNOWLEDGE

(c) The 350 hours of instruction can include classroom work, interactive video, slide or tape presentation, learning carrels, computer-based training, and other media as approved by the Authority, in suitable proportions.

FLYING TRAINING

(d) The flying instruction is divided into four phases:

(1) phase 1:

Exercises up to the first solo flight comprise a total of at least 10 hours dual flight instruction on an SE aeroplane, including:

(i) pre-flight operations, mass and balance determination, aeroplane inspection and servicing;

(ii) aerodrome and traffic pattern operations, collision avoidance and precautions;

(iii) control of the aeroplane by external visual references;

(iv) normal take-offs and landings;

(v) flight at relatively slow air speeds, recognition of and recovery from incipient and full stalls, spin avoidance;

(vi) unusual attitudes and simulated engine failure.
(2) phase 2:

Exercises up to the first solo cross-country flight comprise a total of at least 10 hours of dual flight instruction and at least 10 hours solo flight including:

(i) maximum performance (short field and obstacle clearance) take-offs and short-field landings;

(ii) flight by reference solely to instruments, including the completion of a 180° turn;

(iii) dual cross-country flying using external visual references, DR and radio navigation aids, diversion procedures;

(iv) aerodrome and traffic pattern operations at different aerodromes;

(v) crosswind take-offs and landings;

(vi) abnormal and emergency procedures and manoeuvres, including simulated aeroplane equipment malfunctions;

(vii) operations to, from and transiting controlled aerodromes, compliance with ATS procedures, R/T procedures and phraseology;

(viii) knowledge of meteorological briefing arrangements, evaluation of weather conditions for flight and use of AIS.

(3) phase 3:

Exercises up to the VFR navigation progress test comprise a total of at least 30 hours instruction and at least 58 hours as PIC, including:

(a) at least 10 hours instrument time, which may contain 5 hours of instrument ground time in an FNPT or an FFS and should be conducted by an FI or an authorised SFI;

(b) repetition of exercises of phases 1 and 2, which should include at least 5 hours in an aeroplane certificated for the carriage of at least four persons and have a variable pitch propeller and retractable landing gear;

(c) VFR flight at relatively critical high air speeds, recognition of and recovery from spiral dives;

(d) night flight time including take-offs and landings as PIC.

(4) phase 4:

(5) The dual instruction and testing up to the CPL (A) skill test contain the following:
(i) up to 30 hours instruction which may be allocated to specialised aerial work training;

(ii) repetition of exercises in phase 3, as required;

(iii) in-flight manoeuvres and particular flight characteristics;

(iv) ME training.

If required, operation of an ME aeroplane including operation of the aeroplane with one engine simulated inoperative, and engine shutdown and restart (the latter exercise at a safe altitude unless carried out in an FSTD).

E. CPL modular course: aeroplanes

(a) The CPL modular course should last 18 months. This period may be extended where additional training is provided by the ATO. The flight instruction and skill test need to be completed within the period of validity of the pass in the theoretical examinations.

(b) An approved course should include formal classroom work and may include the use of such facilities as interactive video, slide or tape presentation, learning carrels and computer-based training and other media distance learning (correspondence) courses as approved by the Authority. Approved distance learning (correspondence) courses may also be offered as part of the course.

THEORETICAL KNOWLEDGE

(c) The 250 hours of instruction can include classroom work, interactive video, slide or tape presentation, learning carrels, computer-based training, and other media as approved by the competent authority, in suitable proportions.

FLYING TRAINING

(d) The following flight time is suggested for the flying training:

<table>
<thead>
<tr>
<th>Exercise</th>
<th>Suggested Flight Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>(i) Exercise 1: pre-flight operations: mass and balance determination, aeroplane inspection and servicing.</td>
<td></td>
</tr>
<tr>
<td>(ii) Exercise 2: take-off, traffic pattern, approach and landing, use of checklist, collision avoidance and checking procedures.</td>
<td>0:45 hours</td>
</tr>
<tr>
<td>(iii) Exercise 3: traffic patterns: simulated engine failure during and after take-off</td>
<td>0:45 hours</td>
</tr>
<tr>
<td>(iv) Exercise 4: maximum performance</td>
<td>1:00 hours</td>
</tr>
</tbody>
</table>
(short field and obstacle clearance) take-offs and short-field landings

(v) Exercise 5: 1:00 hours
crosswind take-offs, landings and go-arounds

(vi) Exercise 6: 0:45 hours
flight at relatively critical high air speeds; recognition of and recovery from spiral dives.

(vii) Exercise 7: 0:45 hours
flight at critically slow air speeds, spin avoidance, recognition of and recovery from incipient and full stalls.

(viii) Exercise 8: 10:00 hours
cross-country flying 10:00 hours using DR and radio navigation aids; flight planning by the applicant; filing of ATC flight plan; evaluation of weather briefing documentation, NOTAM, etc.; R/T procedures and phraseology; positioning by radio navigation aids; operation to, from and transiting controlled aerodromes, compliance with ATS procedures for VFR flights, simulated radio communication failure, weather deterioration, diversion procedures; simulated engine failure during cruise flight; selection of an emergency landing strip.

(2) Instrument flight training:

(i) This module is identical to the 10 hours basic instrument flight module as set out in AMC2 to Appendix 6. This module is focused on the basics of flying by sole reference to instruments, including limited panel and unusual attitudes.

(ii) All exercises may be performed in an FNPT I or II or an FFS. If instrument flight training is in VMC, a suitable means of simulating IMC for the student should be used.

(iii) A BITD may be used for the following exercises: (9), (10), (11), (12), 14 and (16).

(iv) The use of the BITD is subject to the following:

(A) the training is complemented by exercises on an aeroplane;

(B) the record of the parameters of the flight is available;

(C) an FI (A) or IRI (A) conducts the instruction.

(ix) Exercise 9: 0:30 hours
Basic instrument flying without
external visual cues; horizontal flight; power changes for acceleration or deceleration, maintaining straight and level flight; turns in level flight with 15° and 25° bank, left and right; roll-out onto predetermined headings.

(y) Exercise 10: 0:45 hours
Repetition of exercise 9; additionally climbing and descending, maintaining heading and speed, transition to horizontal flight; climbing and descending turns.

(xi) Exercise 11: 0:45 hours
Instrument pattern: start exercise, Decelerate to approach speed, flaps into approach configuration;

(1) initiate standard turn (left or right);

(2) roll out on opposite heading, maintain new heading for 1 minute;

(3) standard turn, gear down, descend 500 ft./min;

(4) roll out on initial heading, maintain descent (500 ft./min) and new heading for 1 minute;

(5) transition to horizontal flight, 1.000 ft. below initial flight level;

(6) initiate go-around;

(7) climb at best rate of climb speed.

(xii) Exercise 12: 0:45 hours
Repetition of exercise 9 and steep turns with 45° bank;
recovery from unusual attitudes.

(xiii) Exercise 13: Repetition of exercise 12
0:45 hours

(xiv) Exercise 14: Radio navigation using VOR, NDB or, if available, VDF; interception of predetermined QDM and QDR.
0:45 hours

(xv) Exercise 15: Repetition of exercise 9 and recovery from unusual attitudes.
0:45 hours

(xvi) Exercise 16: Repetition of exercise 9, turns and level change and recovery from unusual attitudes with simulated failure of the artificial horizon or directional gyro.
0:45 hours

(xvii) Exercise 17: Recognition of, and recovery from, incipient and full stalls.
0:45 hours

(xviii) Exercise 18: Repetition of exercises (14), (16) and (17).
3:30 hours

(3) ME training
If required, operation of an ME aeroplane in the exercises 1 through 18, including operation of the aeroplane with one engine simulated inoperative, and engine shutdown and restart. Before commencing training, the applicant should have complied with the type and class ratings requirements as appropriate to the aeroplane used for the test.

F. ATP/IR integrated course: helicopters

(a) The ATP/IR integrated course should last between 12 and 36 months. This period may be extended where additional flying training or ground instruction is provided by the ATO.

CREDITING

(b) Credit for the hours flown should be entered into the applicant’s training record. In case of a student pilot who does not hold a pilot license and with the approval of the Authority, an ATO may designate certain dual exercises to be flown in an aeroplane or a TMG up to a maximum of 20 hours.

THEORETICAL KNOWLEDGE

(c) The 750 hours of instruction can include classroom work, interactive video, slide or tape presentation, learning carrels, computer-based training, and other
media as approved by the competent authority, in suitable proportions. The 750 hours of instruction should be divided in such a way that in each subject the minimum hours are:

1. Air law 40 hours
2. Aircraft general knowledge 80 hours
3. Flight performance and planning 90 hours
4. Human performance and limitations 50 hours
5. Meteorology 60 hours
6. Navigation 150 hours
7. Operational procedures 20 hours
8. Principles of flight 30 hours
9. Communications 30 hours

Other subdivision of hours may be agreed upon between the Authority and the ATO.

(d) The flight instruction is divided into four phases:

1. Phase 1:

   Flight exercises up to the first solo flight comprise a total of not less than 12 hours dual flight instruction on a helicopter, including:

   i. Pre-flight operations, mass and balance determination, helicopter inspection and servicing;

   ii. Aerodrome and traffic pattern operations, collision avoidance and procedures;

   iii. Control of the helicopter by external visual reference;

   iv. Take-offs, landings, hovering, look-out turns and normal transitions from and to the hover;

   v. Emergency procedures, basic auto-rotations, simulated engine failure, ground resonance recovery if relevant to type.

2. Phase 2:

   Flight exercises until general handling and day VFR navigation progress check, and basic instrument flying progress check. This phase comprises a total flight time of not less than 128 hours including 73 hours of dual flight instruction flight time and including at least 5 hours VFR conversion training on an ME helicopter, 15 hours of solo flight and 40 hours flown as student PIC. The instruction and testing contain the following:
(i) sideways and backwards flight, turns on the spot;

(ii) incipient vortex ring recovery;

(iii) advanced/touchdown autorotations, simulated engine-off landings, practice forced landings. Simulated equipment malfunctions and emergency procedures relating to malfunctions of engines, controls, electrical and hydraulic circuits;

(iv) steep turns;

(v) transitions, quick stops, out of wind manoeuvres, sloping ground landings and take-offs;

(vi) limited power and confined area operations, including low level operations to and from unprepared sites;

(vii) flight by sole reference to basic flight instruments, including completion of a 180° turn and recovery from unusual attitudes to simulate inadvertent entry into cloud;

(viii) cross-country flying by external visual reference, DR and radio navigation aids, diversion procedures;

(ix) aerodrome and traffic pattern operations at different aerodromes;

(x) operations to, from and transiting controlled aerodromes; compliance with ATS procedures, R/T procedures and phraseology;

(xi) application of meteorological briefing arrangements, evaluation of weather conditions for flight and use of AIS;

(xii) night flight, including take-offs and landings as PIC;

(xiii) general handling, day VFR navigation and basic instrument flying progress checks in accordance with Appendix 4 to Part-MFCL, conducted by an FI not connected with the applicant’s training.

(3) phase 3:

Flight exercises up to IR skill test. This part comprises a total of 40 hours dual instrument flight time, including 10 hours of an ME IFR certificated helicopter.

The instruction and testing should contain the following:

(i) pre-flight procedures for IFR flights, including the use of the flight manual and appropriate ATS documents in the preparation of an IFR flight plan;

(ii) procedures and manoeuvres for IFR operation under normal, abnormal and emergency conditions covering at least:
(A) transition from visual to instrument flight on take-off;

(B) SIDs and arrivals;

(C) en-route IFR procedures;

(D) holding procedures;

(E) instrument approaches to specified minima;

(F) missed approach procedure;

(G) landings from instrument approaches;

(H) in-flight manoeuvres and particular flight characteristics;

(I) instrument exercises with one engine simulated inoperative.

(4) phase 4:

Instruction in MCC should comprise the relevant training set out in MFCL.735.H and AMC1 MFCL.735.A, MFCL.735.H and MFCL.735.As.

If a type rating for MP helicopter is not required on completion of this part, the applicant should be provided with a certificate of course completion for MCC training.

G. **ATP integrated course: helicopters**

(a) The ATP integrated course should last between 12 and 36 months. This period may be extended where additional flying training or ground instruction is provided by the ATO.

**CREDITING**

(b) Credit for the hours flown should be entered into the applicant’s training record. In case of a student pilot who does not hold a pilot license and with the approval of the Authority, an ATO may designate certain dual exercises to be flown in an aeroplane or a TMG up to a maximum of 20 hours.

**THEORETICAL KNOWLEDGE**

(c) The 650 hours of instruction can include classroom work, interactive video, slide or tape presentation, learning carrels, computer-based training, and other media as approved by the competent authority in suitable proportions. The 650 hours of instruction should be divided in such a way that in each subject the minimum hours are:

(1) Air law 30 hours

(2) Aircraft general knowledge 70 hours

(3) Flight performance and planning 65 hours
(4) Human performance and limitations 40 hours
(5) Meteorology 40 hours
(6) Navigation 120 hours
(7) Operational procedures 20 hours
(8) Principles of flight 30 hours
(9) Communications 25 hours

Other subdivision of hours may be agreed upon between the Authority and the ATO.

(d) The flight instruction is divided into three phases:

(1) phase 1:
Flight exercises up to the first solo flight comprise a total of not less than 12 hours dual flight instruction on a helicopter, including:

(i) pre-flight operations, mass and balance determination, helicopter inspection and servicing;

(ii) aerodrome and traffic pattern operations, collision avoidance and procedures;

(iii) control of the helicopter by external visual reference;

(iv) take-offs, landings, hovering, look-out turns and normal transitions from and to the hover;

(v) emergency procedures, basic auto-rotations, simulated engine failure, ground resonance recovery if relevant to type.

(2) phase 2:
Flight exercises until general handling and day VFR navigation progress and basic instrument flying progress check conducted by an FI not connected with the applicant’s training. This phase comprises a total flight time of not less than 128 hours, including 73 hours of dual instruction flight time and including at least 5 hours VFR conversion training on an ME helicopter, 15 hours of solo flight and 40 hours flown as student PIC. The instruction and testing contain the following:

(i) sideways and backwards flight, turns on the spot;

(ii) incipient vortex ring recovery;

(iii) touchdown or advanced auto-rotations, simulated engine-off landings, practice forced landings. Simulated equipment malfunctions and emergency procedures relating to malfunctions of engines, controls, electrical and hydraulic circuits;
(iv) steep turns;
(v) transitions, quick stops, out of wind manoeuvres, sloping ground landings and take-offs;
(vi) limited power and confined area operations, including low level operations to and from unprepared sites;
(vii) 10 hours flight by sole reference to basic flight instruments, including completion of a 180 ° turn and recovery from unusual attitudes to simulate inadvertent entry into cloud;
(viii) cross-country flying by external visual reference, DR and radio navigation aids, diversion procedures;
(ix) aerodrome and traffic pattern operations at different aerodromes;
(x) operations to, from and transiting controlled aerodromes, compliance with ATS procedures, R/T procedures and phraseology;
(xi) application of meteorological briefing arrangements, evaluation of weather conditions for flight and use of AIS;
(xii) night flight, including take-offs and landings as PIC;
(xiii) general handling, day VFR navigation and basic instrument flying progress checks in accordance with Appendix 4 to Part-MFCL, conducted by an FI not connected with the applicant’s training.

(3) phase 3:

Instruction in MCC comprises the relevant training set out in MFCL.735.H and AMC1 MFCL, 735.A, MFCL.735.H and MFCL.735.As. If a type rating for MP helicopter is not required on completion of this part, the applicant should be provided with a certificate of course completion for MCC training.

H. **ATP modular theoretical knowledge course: helicopters**

(a) The aim of this course is to train pilots who have not received the theoretical knowledge instruction during an integrated course to the level of theoretical knowledge required for the ATPL.

(b) An approved course should include formal classroom work and may include the use of such facilities as interactive video, slide or tape presentation, learning carrels and computer-based training and other media distance learning (correspondence) courses as approved by the Authority. Approved distance learning (correspondence) courses may also be offered as part of the course.

(c) The ATP modular course should last 18 months. This period may be extended where additional training is provided by the ATO. The flight instruction and skill test need to be completed within the period of validity of the pass in the theoretical examinations.
DEPARTMENT OF CIVIL AVIATION
MFCL ACCEPTABLE MEANS OF COMPLIANCE AND GUIDANCE
MATERIAL

I. CPL/IR integrated course: helicopters

(a) The CPL/IR integrated course should last between 9 and 30 months. This period may be extended where additional flying training or ground instruction is provided by the ATO.

CREDITING

(b) Credit for the hours flown should be entered into the applicant’s training record. In case of a student pilot who does not hold a pilot license and with the approval of the Authority, an ATO may designate certain dual exercises to be flown in an aeroplane or a TMG up to a maximum of 20 hours.

THEORETICAL KNOWLEDGE

(c) The 500 hours of instruction can include classroom work, interactive video, slide or tape presentation, learning carrels, computer-based training, and other media as approved by the Authority, in suitable proportions.

The 500 hours of instruction should be divided in such a way that in each subject the minimum hours are:

(1) Air law 30 hours
(2) Aircraft general knowledge 50 hours
(3) Flight performance and planning 60 hours
(4) Human performance and limitations 15 hours
(5) Meteorology 40 hours
(6) Navigation 100 hours
(7) Operational procedures 10 hours
(8) Principles of flight 25 hours
(9) Communications 30 hours

Other subdivision of hours may be agreed upon between the Authority and the ATO.

FLYING TRAINING

(d) The flight instruction is divided into three phases:

1. phase 1:
Flight exercises up to the first solo flight. This part comprises a total of at least 12 hours dual flight instruction on a helicopter including:

   (i) pre-flight operations: mass and balance determination, helicopter inspection and servicing;

   (ii) aerodrome and traffic pattern operations, collision avoidance and procedures;

   (iii) control of the helicopter by external visual reference;
(iv) take-offs, landings, hovering, look-out turns and normal transitions from and to the hover;

(v) emergency procedures, basic auto-rotation, simulated engine failure, ground resonance recovery if relevant to type.

(2) phase 2:
Flight exercises until general handling and day VFR navigation progress check conducted by an FI not connected with the applicant’s training, and basic instrument progress check. This part comprises a total flight time of not less than 128 hours, including 73 hours of dual instruction flight time and including at least 5 hours VFR conversion training on an ME helicopter,

15 hours of solo flight and 40 hours flown as SPIC. The instruction and testing contain the following:

(i) sideways and backwards flight, turns on the spot;

(ii) incipient vortex ring recovery;

(iii) Simulated equipment malfunctions and emergency procedures relating to malfunctions of engines, controls, electrical and hydraulic circuits;

(iv) steep turns;

(v) transitions, quick stops, out of wind manoeuvres, sloping ground landings and take-offs;

(vi) limited power and confined area operations, including selection of and low level operations to and from unprepared sites;

(vii) flight by sole reference to basic flight instruments, including completion of 180 degree turn and recovery from unusual attitudes to simulate inadvertent entry into cloud;

(viii) cross-country flying by external visual reference, DR and radio navigation aids and diversion procedures;

(ix) aerodrome and traffic pattern operations at different aerodromes;

(x) operations to, from and transiting controlled aerodromes, compliance with ATS procedures, R/T procedures and phraseology;

(xi) application of meteorological briefing arrangements, evaluation of weather conditions for flight and use of AIS;

(xii) night flight, including take-offs and landings as PIC;

(xiii) general handling, day VFR navigation and basic instrument flying progress checks in accordance with Appendix 4 to Part-MFCL, conducted by an FI not connected with the applicant’s training.

(3) phase 3:
Flight exercises up to IR skill test. This part comprises a total of 40 hours dual
instrument flight time, including 10 hours of an ME IFR certificated helicopter.
The instruction and testing should contain the following:

(i) pre-flight procedures for IFR flights, including the use of the flight manual and appropriate ATS documents in the preparation of an IFR flight plan;

(ii) procedures and manoeuvres for IFR operation under normal, abnormal and emergency conditions covering at least:
   (A) transition from visual to instrument flight on take-off;
   (B) SIDs and arrivals;
   (C) en-route IFR procedures;
   (D) holding procedures;
   (E) instrument approaches to specified minima;
   (F) missed approach procedure;
   (G) landings from instrument approaches;
   (H) in-flight manoeuvres and particular flight characteristics;
   (I) instrument exercises with one engine simulated inoperative.

J. **CPL integrated course: helicopters**

(a) The CPL integrated course should last between 9 and 24 months. This period may be extended where additional flying training or ground instruction is provided by the ATO.

**CREDITING**

(b) Credit for the hours flown should be entered into the applicant’s training record. In case of a student pilot who does not hold a pilot license and with the approval of the Authority, an ATO may designate certain dual exercises to be flown in an aeroplane or a TMG up to a maximum of 20 hours.

**THEORETICAL KNOWLEDGE**

(c) The 350 hours of instruction can include classroom work, interactive video, slide or tape presentation, learning carrels, computer-based training, and other media as approved by the Authority, in suitable proportions.

The 350 hours of instruction should be divided in such a way that in each subject the minimum hours are:

(1) Air law 25 hours
(2) Aircraft general knowledge 30 hours
(3) Flight performance and planning 25 hours
(4) Human performance and limitations 10 hours
(5) Meteorology 30 hours  
(6) Navigation 55 hours  
(7) Operational procedures 8 hours  
(8) Principles of flight 20 hours  
(9) Communications 10 hours

Other subdivision of hours may be agreed upon between the Authority and the ATO.

**FLYING TRAINING**

(d) The flight instruction is divided into two phases:

(1) phase 1:

Flight exercises up to the first solo flight. This part comprises a total of not less than 12 hours dual flight instruction on a helicopter, including:

(i) pre-flight operations: mass and balance determination, helicopter inspection and servicing;

(ii) aerodrome and traffic pattern operations, collision avoidance and procedures;

(iii) control of the helicopter by external visual reference;

(iv) take-offs, landings, hovering, look-out turns and normal transitions from and to the hover;

(v) emergency procedures, basic auto-rotations, simulated engine failure, ground resonance recovery if relevant to type.

(2) phase 2:

Flight exercises until general handling and day VFR navigation progress check conducted by an FI not connected with the applicant’s training, and basic instrument progress check. This part comprises a total flight time of not less than 123 hours, including 73 hours of dual instruction flight time, 15 hours of solo flight and 35 hours flown as SPIC. The instruction and testing contain the following:

(i) sideways and backwards flight, turns on the spot;

(ii) incipient vortex ring recovery;

(iii) touchdown or advanced auto-rotations and simulated engine-off landings, practice forced landings. Simulated equipment malfunctions and emergency procedures relating to malfunctions of engines, controls, electrical and hydraulic circuits;

(iv) steep turns;

(v) transitions, quick stops, out of wind manoeuvres, sloping ground
landings and take-offs;

(vi) limited power and confined area operations, including selection of and low level operations to and from unprepared sites;

(vii) flight by sole reference to basic flight instruments, including completion of a 180° turn and recovery from unusual attitudes to simulate inadvertent entry into cloud;

(viii) cross-country flying by external visual reference, DR and radio navigation aids, diversion procedures;

(ix) aerodrome and traffic pattern operations at different aerodromes;

(x) operations to, from and transiting controlled aerodromes, compliance with ATS procedures, R/T procedures and phraseology;

(xi) application of meteorological briefing arrangements, evaluation of weather conditions for flight and use of AIS;

(xii) night flight, including take-offs and landings as PIC;

(xiii) general handling, day VFR navigation and basic instrument flying progress checks in accordance with Appendix 4 to Part-MFCL, conducted by an FI not connected with the applicant’s training.

K. CPL modular course: helicopters

(a) The CPL modular course should last 18 months. This period may be extended where additional training is provided by the ATO. The flight instruction and skill test need to be completed within the period of validity of the pass in the theoretical examinations.

(b) An approved course should include formal classroom work and may include the use of facilities such as interactive video, slide or tape presentation, learning carrels and computer-based training and other media distance learning (correspondence) courses as approved by the competent authority. Approved distance learning (correspondence) courses may also be offered as part of the course.

THEORETICAL KNOWLEDGE

(c) The 250 hours of instruction can include classroom work, interactive video, slide or tape presentation, learning carrels, computer-based training, and other media as approved by the Authority, in suitable proportions.

FLYING TRAINING

(d) The flying instruction comprises the following items. The flight time allocated to each exercise is at the discretion of the FI, provided that at least 5 hours flight time is allocated to cross-country flying.

VISUAL INSTRUCTION
Within the total of dual flight instruction time, the applicant may have completed during the visual phase up to 5 hours in a helicopter FFS or FTD 2, 3 or FNPT II, III.

1. Pre-flight operations: mass and balance calculations, helicopter inspection and servicing;

2. Level flight speed changes, climbing, descending, turns, basic auto-rotations, use of checklist, collision avoidance and checking procedures;

3. Take-offs and landings, traffic pattern, approach, simulated engine failures in the traffic pattern. Sideways and backwards flight and spot turns in the hover;

4. Recovery from incipient vortex ring condition;

5. Advanced auto-rotations covering the speed range from low speed to maximum range and manoeuvre in auto-rotations (180°, 360° and 'S' turns) and simulated engine-off landings;

6. Selection of emergency landing areas, auto-rotations following simulated emergencies to given areas and steep turns at 30° and 45° bank;

7. Manoeuvres at low level and quick-stops;

8. Landings, take-offs and transitions to and from the hover when heading out of wind;

9. Landings and take-offs from sloping or uneven ground;

10. Landings and take-offs with limited power;

11. Low level operations into and out of confined landing sites;

12. Cross-country flying using dead reckoning and radio navigation aids, flight planning by the applicant, filing of ATC flight plan, evaluation of weather briefing documentation, NOTAM, etc., R/T procedures and phraseology, positioning by radio navigation aids; operation to, from and transiting controlled aerodromes, compliance with ATS procedures for VFR flights, simulated radio communication failure, weather deterioration, diversion procedures; location of an off airfield landing site and simulated approach.

BASIC INSTRUMENT INSTRUCTION

A maximum of 5 hours of the following exercises may be performed in an FFS or FTD or FNPT. Flight training should be carried out in VMC using a suitable means of simulating IMC for the student.

1. Exercise 1: Instrument flying without external visual cues. Level flight performing speed changes, maintaining flight altitude (level, heading) turns in level flight at rate 1 and 30° bank, left and right; roll-out on predetermined headings;
(2) Exercise 2: repetition of exercise 1; additionally climbing and descending, maintaining heading and speed, transition to horizontal flight; climbing and descending turns;

(3) Exercise 3: repetition of exercise 1; and recovery from unusual attitudes;

(4) Exercise 4: radio navigation;

(5) Exercise 5: repetition of exercise 1; and turns using standby magnetic compass and standby artificial horizon (if fitted).

### GM1 to Appendix 5 Integrated MPL training course

**GENERAL**

(a) In broad terms, the MPL holder is expected to be able to complete the airline operators’ conversion course with a high probability of success and within the time frame normally allowed for this phase. The standard is equivalent to what is currently expected from graduates of the ATP (A) integrated course who have completed type rating training.

(b) The general approach is to use the existing ATP (A) integrated training course as a reference and to implement progressively the MPL integrated training course and specifically the transfer from actual flight to simulated flight.

(c) This transfer should be organised in a way that is similar to the approach used for ETOPS. Successive evolutions of the training syllabus introduce progressively a higher level of simulated flight and a reduction of actual flight. Change from one version to the next should only take place after enough experience has been gained and once its results, including those of airline operator conversion courses, have been analysed and taken into account.
**MPL TRAINING SCHEME**

(a) The following scheme should be applied:

---

**MPL Training Scheme**

**Minimum 240 hours of training, including “Pilot Flying” (PF) and “Pilot Non Flying” (PNF)**

**ISSUE 3 Rev 0**

Dated 04 MARCH 2015
THEORETICAL KNOWLEDGE INSTRUCTION

(e) The 750 hours of theoretical knowledge instruction can include classroom work, interactive video, slide or tape presentation, learning carrels, computer-based training, and other media as approved by the Authority, in suitable proportions.

COMPETENCY UNITS, COMPETENCY ELEMENTS AND PERFORMANCE CRITERIA

(f) Apply human performance principles, including principles of threat and error management:

(1) cooperation;

(2) leadership and managerial skills;

(3) situation awareness;

(4) decision making.

These behaviour categories are intended to help in the effective utilisation of all available resources to achieve safe and efficient operations. These behaviour categories may be adapted and extended to incorporate issues like communication and use of automation if it is considered to be relevant to the development of the curriculum.

(g) Perform Aircraft Ground and Pre-Flight Operations

List of competency elements and performance criteria:

(1) demonstrate attitudes and behaviours appropriate to the safe conduct of flight, including recognising and managing potential threats and errors;

<table>
<thead>
<tr>
<th>Duty</th>
<th>Observation assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Satisfactory (S)</td>
</tr>
<tr>
<td></td>
<td>Unsatisfactory (U)</td>
</tr>
</tbody>
</table>

(2) perform dispatch duties: (S) or (U)

(i) Verifies technical condition of the a/c, including adequate use of MEL; PF/PNF

(ii) checks technical bulletins and notices; PF/PNF

(iii) determines operational environment and pertinent weather; PF/PNF

(iv) determines impact of weather on aircraft PF/PNF
DEPARTMENT OF CIVIL AVIATION
MFCL ACCEPTABLE MEANS OF COMPLIANCE AND GUIDANCE MATERIAL

performance;

(v) applies flight planning and load procedures; PF/PNF
(vi) determines fuel requirement; PF/PNF
(vii) files an ATS flight plan (if required). PF/PNF

(3) provide flight crew and cabin crew briefings;
   (i) briefed flight crew in all relevant matters; (S) or (U) PF
   (ii) briefed cabin crew in all relevant matters. PF

(4) perform pre-flight checks and cockpit preparation:
   (i) ensures the airworthiness of the aircraft; PF
   (ii) performs the cockpit preparation and briefings; PF/PNF
   (iii) performs FMS initialisation, data insertion and confirmation; PF/PNF
   (iv) optimises and checks take-off performance and take-off data calculation. PF/PNF

(5) perform engine start:
   (S) or (U)
   (i) asks for, receives acknowledges and checks ATC clearance; PNF
   (ii) performs engine start procedure; PF/PNF
   (iii) uses standard communication procedures with ground crew and ATC.

(6) perform taxi out:
   (S) or (U)
   (i) receives, checks and adheres to taxi clearance PNF
   (ii) taxis the aircraft, including use of exterior lighting; PF
   (iii) complies to taxi clearance; PF/PNF
   (iv) maintains look-out for conflicting traffic and obstacles; PF/PNF
   (v) operates thrust, brakes and steering; PF
(vi) conducts relevant briefings; PF
(vii) uses standard communication procedures with crew and ATC; PNF
(viii) completes standard operating procedures and checklists; PF/PNF
(ix) updates and confirms FMS data; PF/PNF
(x) manages changes in performance and departure route; PF/PNF
(xi) completes de-ice or anti-ice procedures. PF/PNF

(7) manage abnormal and emergency situations: (S) or (U)
(i) identifies the abnormal condition; PF/PNF
(ii) interprets the abnormal condition; PF/PNF
(iii) performs the procedure for the abnormal condition.

(8) communicate with cabin crew, passengers and company: (S) or (U)
(i) communicates relevant information with cabin crew; PF
(ii) communicates relevant information with company; PF/PNF
(iii) makes passenger announcements when appropriate PF/PNF

(h) Perform take-off

List of competency elements and performance criteria:

(1) demonstrate attitudes and behaviours appropriate to the safe conduct of flight, including recognising and managing potential threats and errors.

(2) perform pre-take-off and pre-departure preparation: (S) or (U)

(i) checks and acknowledges line up clearance; PF/PNF
(ii) checks correct runway selection; PF/PNF
(iii) confirms validity of performance data; PF/PNF
(iv) checks approach sector and runway are clear; PF/PNF
(v) confirms all checklists and take-off; PF/PNF
preparations completed
(vi) lines up the aircraft on centreline losing distance; PF
without
(vii) checks weather on departure sector; PF/PNF
(viii) checks runway status and wind. PF/PNF

(3) perform take-off roll: (S) or (U)
(i) applies take-off thrust PF
(ii) checks engine parameters PNF
(iii) checks air speed indicators PF/PNF
(iv) stays on runway centerline PF

(4) perform transition to instrument flight rules: (S) or (U)
(i) applies V, procedures; PF/PNF
(ii) rotates at V to initial pitch attitude; PF
(iii) establishes initial wings level attitude; PF
(iv) retracts landing gear; PNF
(v) maintains climb out speed. PF

(5) perform initial climb to flap retraction altitude: (S) or (U)
(i) sets climb power; PF
(ii) adjusts attitude for acceleration; PF
(iii) selects flaps according flap speed schedule; PF/PNF
(iv) observes speed restrictions; PF
(v) completes relevant checklists. PF/PNF

(6) perform rejected take-off: (S) or (U)
(i) recognises the requirement to abort the take-off; PF
(ii) applies the rejected take-off procedure; PF
(iii) assesses the need to evacuate the aircraft. PF/PNF
(7) perform navigation:  (S) or (U)
   (i) complies to departure clearance;  PF
   (ii) complies with published departure procedures, for example speeds;  PF
   (iii) monitors navigation accuracy;  PF/PNF
   (iv) communicates and coordinates with ATC.  PNF

(8) manage abnormal and emergency situations:  (S) or (U)
   (i) identifies the abnormal condition;  PF/PNF
   (ii) interprets the abnormal condition;  PF/PNF
   (iii) perform the procedure for the abnormal condition.  PF/PNF

   (i) Perform climb

List of competency elements and performance criteria:

(1) demonstrate attitudes and behaviours appropriate to the safe conduct of flight, including recognising and managing potential threats and errors;

(2) perform SID or en-route navigation:  (S) or (U)
   (i) complies with departure clearance and procedures;  PF
   (ii) demonstrates terrain awareness;  PF/PNF
   (iii) monitors navigation accuracy;  PF/PNF
   (iv) adjusts flight to weather and traffic conditions;  PF
   (v) communicates and coordinates with ATC;  PNF
   (vi) observes minimum altitudes;  PF/PNF
   (vii) selects appropriate level of automation;  PF
   (viii) complies with altimeter setting procedures.  PF/PNF

(3) complete climb procedures and checklists:  (S) or (U)
   (i) performs the after take-off items;  PF/PNF
   (ii) confirms and checks according checklists.  PF/PNF

(4) modify climb speeds, rate of climb and cruise altitude:  (S) or (U)
MFCL ACCEPTABLE MEANS OF COMPLIANCE AND GUIDANCE MATERIAL

(i) recognises the need to change speed, rate of climb or cruise altitude;
(ii) selects and maintains the appropriate climb speed or rate of climb;
(iii) selects optimum cruise flight level.

(5) perform systems operations and procedures: (S) or (U)
   (i) monitors operation of all systems; PF/PNF
   (ii) operates systems as required. PF/PNF

(6) manage abnormal and emergency situations: (S) or (U)
   (i) identifies the abnormal condition; PF/PNF
   (ii) interprets the abnormal condition; PF/PNF
   (iii) Performs the procedure for the abnormal PF/PNF condition.

(7) communicate with cabin crew, passengers and company: (S) or (U)
   (i) communicates relevant information with cabin crew;
   (ii) Communicates relevant information with PF/PNF company;
   (iii) Makes passenger announcements when appropriate.

(j) Perform cruise
List of competency elements and performance criteria.

(1) demonstrate attitudes and behaviours appropriate to the safe conduct of flight, including recognising and managing potential threats and errors;

(2) monitor navigation accuracy: (S) or (U)
   (i) demonstrates adequate area knowledge; PF/PNF
   (ii) demonstrates adequate route knowledge; PF/PNF
   (iii) navigates according to flight plan and clearance; PF
   (iv) adjusts flight to weather and traffic conditions; PF
   (v) communicates and coordinates with ATC; PNF
   (vi) observes minimum altitudes; PF/PNF
DEPARTMENT OF CIVIL AVIATION
MFCL ACCEPTABLE MEANS OF COMPLIANCE AND GUIDANCE
MATERIAL

(vii) uses all means of automation. PF

(3) monitor flight progress: (S) or (U)
   (i) selects optimum speed; PF
   (ii) selects optimum cruise flight level; PF
   (iii) monitors and controls fuel status; PF/PNF
   (iv) recognises the need for a possible diversion; PF/PNF
   (v) creates a diversion contingency plan if required. PF/PNF

(4) perform descent and approach planning: (S) or (U)
   (i) checks weather of destination and alternate PF/PNF airport;
   (ii) checks runway in use and approach procedure; PF/PNF
   (iii) sets the FMS accordingly; PNF
   (iv) checks landing weight and landing distance required;
   (v) checks MEA, MGA and MSA; PF/PNF
   (vi) identifies top of descent point. PF

(5) perform systems operations and procedures: (S) or (U)
   (i) monitors operation of all systems; PF/PNF
   (ii) operates systems as required. PNF

(6) manage abnormal and emergency situations: (S) or (U)
   (i) identifies the abnormal condition; PF/PNF
   (ii) interprets the abnormal condition; PF/PNF
   (iii) performs the procedure for the abnormal PF/PNF condition.

(7) communicate with cabin crew, passengers and company: (S) or (U)
   (i) communicates relevant information with cabin crew; PF
   (ii) communicates relevant information with company; PF/PNF
   (iii) makes passenger announcements when PF.
(k) Perform descent

List of competency elements and performance criteria:

(1) Demonstrate attitudes and behaviours appropriate to the safe conduct of flight, including recognising and managing potential threats and errors;

(2) initiate and manage descent: (S) or (U)

(i) starts descent according to ATC clearance or optimum descent point; PF

(ii) selects optimum speed and descent rate; PF

(iii) adjusts speed to existing environmental conditions; PF

(iv) recognises the need to adjust the descent path; PF

(v) adjusts the flight path as required; PF

(vi) utilises all means of FMS descent information. PF

(3) monitor and perform en route and descent (S) or (U)

(i) complies with arrival clearance and procedures PF

(ii) demonstrates terrain awareness; PF/PNF

(iii) monitors navigation accuracy; PF/PNF

(iv) adjusts flight to weather and traffic conditions; PF

(v) communicates and coordinates with ATC; PNF

(vi) observes minimum altitudes; PF/PNF

(vii) selects appropriate level or mode of automation; PF

(viii) complies with altimeter setting procedures. PF/PNF

(4) re-planning and update of approach briefing: (S) or (U)

(i) re-checks destination weather and runway in use; PNF

(ii) briefs or re-briefs about instrument approach and landing as required; PF

(iii) reprograms the FMS as required; PNF

(iv) re-checks fuel status. PF/PNF
(5) perform holding: (S) or (U)
   (i) identifies holding requirement; PF/PNF
   (ii) programs FMS for holding pattern; PNF
   (iii) enters and monitors holding pattern; PF
   (iv) assesses fuel requirements and determines max holding time; PF/PNF
   (v) reviews the need for a diversion; PF/PNF
   (vi) initiates diversion.

(6) perform systems operations and procedures: (S) or (U)
   (i) monitors operation of all systems; PF/PNF
   (ii) operates systems as required. PF/PNF

(7) manage abnormal and emergency situations:
   (i) identifies the abnormal condition; PF/PNF
   (ii) interprets the abnormal condition; PF/PNF
   (iii) performs the procedure for the abnormal condition; PF/PNF

(8) communicate with cabin crew, passengers and company: (S) or (U)
   (i) communicates relevant information with cabin crew; PF
   (ii) communicates relevant information with company; PF/PNF
   (iii) makes passenger announcements when appropriate; PF

(1) Perform approach

List of competency elements and performance criteria:

(1) demonstrate attitudes and behaviours appropriate to the safe conduct of flight, including recognising and managing potential threats and errors;
(2) perform approach in general: (S) or (U)
   (i) executes approach according to procedures and PF
       situation;
   (ii) selects appropriate level or mode of PF
        automation;
   (iii) selects optimum approach path; PF
   (iv) operates controls smooth and coordinated; PF
   (v) performs speed reduction and flap extension; PF/PNF
   (vi) performs relevant checklists; PF/PNF
   (vii) initiates final descent; PF
   (viii) achieves stabilised approach criteria; PF
   (ix) ensures adherence to minima; PF/PNF
   (x) initiates go-around if required; PF
   (xi) masters transition to visual segment. PF

(3) perform precision approach: (S) or (U)
   (i) performs ILS approach; PF
   (ii) performs MLS approach. PF

(4) perform non-precision approach: (S) or (U)
   (i) performs VOR approach; PF
   (ii) performs NDB approach; PF
   (iii) performs SRE approach; PF
   (iv) performs GNSS approach; PF
   (v) performs ILS loc approach; PF
   (vi) performs ILS back beam approach. PF

(5) perform approach with visual reference to ground: (S) or (U)
   (i) performs standard visual approach; PF
   (ii) performs circling approach. PF

(6) monitor the flight progress: (S) or (U)
   (i) insures navigation accuracy; PF/PNF
   (ii) communicates with ATC and crew members; PNF
(iii) monitors fuel status.  

(7) perform systems operations and procedures:
   (i) monitors operation of all systems;  
   (ii) operates systems as required.  

(8) manage abnormal and emergency situations:  
   (S) or (U)
   (i) identifies the abnormal condition;  
   (ii) interprets the abnormal condition;  
   (iii) performs the procedure for the abnormal condition.  

(9) perform missed approach and go-around:  
   (S) or (U)
   (i) initiates go-around procedure;  
   (ii) navigates according to missed approach procedure;  
   (iii) completes the relevant checklists;  
   (iv) initiates approach or diversion after the go-around;  
   (v) communicates with ATC and crew members.  

(10) communicate with cabin crew, passengers and company:  
   (S) or (U)
   (i) communicates relevant information with cabin crew;  
   (ii) communicates relevant information with company;  
   (iii) makes passenger announcements when appropriate;  
   (iv) initiates go-around procedure.  

(m) Perform landing

List of competency elements and performance criteria:

(1) demonstrate attitudes and behaviours appropriate to the safe conduct of flight, including recognising and managing potential threats and errors;
(2) 

land the aircraft; 

(i) maintains a stabilised approach path during visual segment; 

(ii) recognises and acts on changing conditions for windshift or wind shear segment; 

(iii) initiates flare; 

(iv) controls thrust; 

(v) achieves touchdown in touchdown zone on centreline; 

(vi) lowers nose wheel; 

(vii) maintains centreline; 

(viii) performs after-touchdown procedures; 

(ix) makes use of appropriate braking and reverse thrust; 

(x) vacates runway with taxi speed. 

(3) 

perform systems operations and procedures: 

(i) monitors operation of all systems; 

(ii) operates systems as required. 

(4) 

manage abnormal and emergency situations: 

(i) identifies the abnormal condition; 

(ii) interprets the abnormal condition; 

(iii) performs the procedure for the abnormal condition. 

(n) 

Perform after landing and post flight operations 

List of competency elements and performance criteria: 

(1) 

demonstrate attitudes and behaviours appropriate to the safe conduct of flight, including recognising and managing potential threats and errors; 

(2) 

perform taxiing and parking: 

(i) receives, checks and adheres to taxi clearance; 

(ii) taxies the aircraft including use of exterior lighting; 

(iii) controls taxi speed;
(iv) maintains centreline; PF
(v) maintains look-out for conflicting traffic and obstacles; PF
(vi) identifies parking position; PF/PNF
(vii) complies with marshalling or stand guidance; PF/PNF
(viii) applies parking and engine shut down procedures; PF
(ix) completes with relevant checklists. PF/PNF

(3) perform aircraft post-flight operations: (S) or (U)
   (i) communicates to ground personnel and crew; PF
   (ii) completes all required flight documentation; PF/PNF
   (iii) ensures securing of the aircraft; PF
   (iv) conducts the debriefings. PF

(4) perform systems operations and procedures: (S) or (U)
   (i) monitors operation of all systems; PF/PNF
   (ii) operates systems as required. PF/PNF

(5) manage abnormal and emergency situations: (S) or (U)
   (i) identifies the abnormal condition; PF/PNF
   (ii) interprets the abnormal condition; PF/PNF
   (iii) performs the procedure for the abnormal condition.

(6) communicate with cabin crew, passengers and company: (S) or (U)
   (i) communicates relevant information with cabin crew; PF
   (ii) communicates relevant information with company; PF/PNF
   (iii) makes passenger announcements when appropriate. PF

MFCL ACCEPTABLE MEANS OF COMPLIANCE AND GUIDANCE MATERIAL

PRINCIPLES OF THREAT AND ERROR MANAGEMENT

(o) One model that explains the principles of threat and error management is the TEM model.

(1) The components of the TEM model:

There are three basic components in the TEM model, from the perspective of flight crews: threats, errors and undesired aircraft states. The model proposes that threats and errors are part of everyday aviation operations that must be managed by flight crews, since both threats and errors carry the potential to generate undesired aircraft states. Flight crews must also manage undesired aircraft states, since they carry the potential for unsafe outcomes. Undesired state management is an essential component of the TEM model, as important as threat and error management. Undesired aircraft state management largely represents the last opportunity to avoid an unsafe outcome and thus maintain safety margins in flight operations.

(2) Threats:

(i) Threats are defined as events or errors that occur beyond the influence of the flight crew, increase operational complexity, and which must be managed to maintain the margins of safety. During typical flight operations, flight crews have to manage various contextual complexities. Such complexities would include, for example, dealing with adverse meteorological conditions, airports surrounded by high mountains, congested airspace, aircraft malfunctions, errors committed by other people outside of the cockpit, such as air traffic controllers, flight attendants or maintenance workers, and so forth. The TEM model considers these complexities as threats because they all have the potential to negatively affect flight operations by reducing margins of safety;

(ii) Some threats can be anticipated, since they are expected or known to the flight crew. For example, flight crews can anticipate the consequences of a thunderstorm by briefing their response in advance, or prepare for a congested airport by making sure they keep a watchful eye on other aircraft as they execute the approach;

(iii) Some threats can occur unexpectedly, such as an in-flight aircraft malfunction that happens suddenly and without warning. In this case, flight crews must apply skills and knowledge acquired through training and operational experience;

(iv) Lastly, some threats may not be directly obvious to, or observable by, flight crews immersed in the operational context, and may need to be uncovered by safety analysis. These are considered latent
threats. Examples of latent threats include equipment design issues, optical illusions, or shortened turn-around schedules;

(v) Regardless of whether threats are expected, unexpected, or latent, one measure of the effectiveness of a flight crew’s ability to manage threats is whether threats are detected with the necessary anticipation to enable the flight crew to respond to them through deployment of appropriate countermeasures;

(vi) Threat management is a building block to error management and undesired aircraft state management. Although the threat-error linkage is not necessarily straightforward, and although it may not be always possible to establish a linear relationship, or one-to-one mapping between threats, errors and undesired states, archival data demonstrates that mismanaged threats are normally linked to flight crew errors, which in turn are often linked to undesired aircraft states. Threat management provides the most proactive option to maintain margins of safety in flight operations, by voiding safety-compromising situations at their roots. As threat managers, flight crews are the last line of defence to keep threats from impacting flight operations;#

(vii) Table 1 presents examples of threats, grouped under two basic categories derived from the TEM Model. Environmental threats occur due to the environment in which flight operations take place. Some environmental threats can be planned for and some will arise spontaneously, but they all have to be managed by flight crews in real time. Organisational threats, on the other hand, can be controlled (for example removed or, at least, minimised) at source by aviation organisations. Organisational threats are usually latent in nature. Flight crews still remain the last line of defence, but there are earlier opportunities for these threats to be mitigated by aviation organisations themselves.
### Environmental Threats

<p>| | |</p>
<table>

#### Table 1. Examples of threats (list is not exhaustive)

**(3) Errors:**

(i) Errors are defined actions or inactions by the flight crew that lead to deviations from organisational or flight crew intentions or expectations. Unmanaged or mismanaged errors frequently lead to undesired aircraft states. Errors in the operational context thus tend to reduce the margins of safety and increase the probability of adverse events;

(ii) Errors can be spontaneous (for example without direct linkage to specific, obvious threats), linked to threats, or part of an error chain. Examples of errors would include the inability to maintain stabilised approach parameters, executing a wrong automation mode, failing to give a required callout, or misinterpreting an ATC clearance;

(iii) Regardless of the type of error, an error’s effect on safety depends on whether the flight crew detects and responds to the error before it leads to an undesired aircraft state and to a potential unsafe outcome. This is why one of the objectives of TEM is to understand error management (for example detection and response), rather than to solely focus on error causality (for example causation and commission). From the safety perspective, operational errors that are timely detected and
promptly responded to (for example properly managed), errors that do not lead to undesired aircraft states, do not reduce margins of safety in flight operations, and thus become operationally inconsequential. In addition to its safety value, proper error management represents an example of successful human performance, presenting both learning and training value;

(iv) Capturing how errors are managed is then as important, if not more, as capturing the prevalence of different types of error. It is of interest to capture if and when errors are detected and by whom, the response(s) upon detecting errors, and the outcome of errors. Some errors are quickly detected and resolved, thus becoming operationally inconsequential, while others go undetected or are mismanaged. A mismanaged error is defined as an error that is linked to or induces an additional error or undesired aircraft state;

(v) Table 2 presents examples of errors, grouped under three basic categories derived from the TEM model. In the TEM concept, errors have to be ‘observable’ and therefore, the TEM model uses the ‘primary interaction’ as the point of reference for defining the error categories;

(vi) The TEM model classifies errors based upon the primary interaction of the pilot or flight crew at the moment the error is committed. Thus, in order to be classified as aircraft handling error, the pilot or flight crew must be interacting with the aircraft (for example through its controls, automation or systems). In order to be classified as procedural error, the pilot or flight crew must be interacting with a procedure (for example checklists; SOPs; etc.). In order to be classified as communication error, the pilot or flight crew must be interacting with people (ATC, ground crew, other crewmembers, etc.);

(vii) Aircraft handling errors, procedural errors and communication errors may be unintentional or involve intentional non-compliance. Similarly, proficiency considerations (for example skill or knowledge deficiencies, training system deficiencies) may underlie all three categories of error. In order to keep the approach simple and avoid confusion, the TEM model does not consider intentional non-compliance and proficiency as separate categories of error, but rather as sub-sets of the three major categories of error.
### Aircraft handling errors

<table>
<thead>
<tr>
<th></th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(A)</td>
<td>manual handling, flight controls: vertical, lateral or speed deviations, incorrect flaps or speed brakes, thrust reverser or power settings;</td>

<td>pilot to pilot: within crew miscommunication or misinterpretation.</td>
</tr>
</tbody>
</table>

Table 2. Examples of errors (list is not exhaustive)

(4) Undesired aircraft states:

(i) Undesired aircraft states are flight crew-induced aircraft position or speed deviations, misapplication of flight controls, or incorrect systems configuration, associated with a reduction in margins of safety. Undesired aircraft states that result from ineffective threat or error management may lead to compromising situations and reduce margins of safety in flight operations. Often considered at the cusp of becoming an
incident or accident, undesired aircraft states must be managed by flight crews;

(ii) Examples of undesired aircraft states would include lining up for the incorrect runway during approach to landing, exceeding ATC speed restrictions during an approach, or landing long on a short runway requiring maximum braking. Events such as equipment malfunctions or ATC controller errors can also reduce margins of safety in flight operations, but these would be considered threats;

(iii) Undesired states can be managed effectively, restoring margins of safety, or flight crew response(s) can induce an additional error, incident, or accident;

(iv) Table 3 presents examples of undesired aircraft states, grouped under three basic categories derived from the TEM model;

Table 3. Examples of undesired aircraft states (list is not exhaustive)

(v) An important learning and training point for flight crews is the
timely switching from error management to undesired aircraft state management. An example would be as follows: a flight crew selects a wrong approach in the FMC. The flight crew subsequently identifies the error during a cross-check prior to the FAF. However, instead of using a basic mode (for example heading) or manually flying the desired track, both flight crew members become involved in attempting to reprogram the correct approach prior to reaching the FAF. As a result, the aircraft 'stitches' through the localiser, descends late, and goes into an unstable approach. This would be an example of the flight crew getting 'locked in' to error management, rather than switching to undesired aircraft state management. The use of the TEM model assists in educating flight crews that, when the aircraft is in an undesired state, the basic task of the flight crew is undesired aircraft state management instead of error management. It also illustrates how easy it is to get locked in to the error management phase;

(vi) Also from a learning and training perspective, it is important to establish a clear differentiation between undesired aircraft states and outcomes. Undesired aircraft states are transitional states between a normal operational state (for example a stabilised approach) and an outcome. Outcomes, on the other hand, are end states, most notably, reportable occurrences (for example incidents and accidents). An example would be as follows: a stabilized approach (normal operational state) turns into an unstabilised approach (undesired aircraft state) that results in a runway excursion (outcome);

(vii) The training and remedial implications of this differentiation are of significance. While at the undesired aircraft state stage, the flight crew has the possibility, through appropriate TEM, of recovering the situation, returning to a normal operational state, thus restoring margins of safety. Once the undesired aircraft state becomes an outcome, recovery of the situation, return to a normal operational state, and restoration of margins of safety is not possible.

(5) Countermeasures:

(i) Flight crews must, as part of the normal discharge of their operational duties, employ countermeasures to keep threats, errors and undesired aircraft states from reducing margins of safety in flight operations. Examples of countermeasures would include checklists, briefings, call-outs and SOPs, as well as personal strategies and tactics. Flight crews dedicate significant amounts of time and energies to the application of countermeasures to ensure margins of safety during flight operations. Empirical observations during training and checking suggest that as much as 70 % of flight crew activities may be countermeasures-related activities.
(ii) All countermeasures are necessarily flight crew actions. However, some countermeasures to threats, errors and undesired aircraft states that flight crews employ build upon ‘hard’ resources provided by the aviation system. These resources are already in place in the system before flight crews report for duty, and are therefore considered as systemic-based countermeasures. The following would be examples of ‘hard’ resources that flight crews employ as systemic-based countermeasures:

(A) ACAS;
(B) TAWS;
(C) SOPs;
(D) checklists;
(E) briefings;
(F) training;
(G) etc.

(iii) Other countermeasures are more directly related to the human contribution to the safety of flight operations. These are personal strategies and tactics, individual and team countermeasures that typically include canvassed skills, knowledge and attitudes developed by human performance training, most notably, by CRM training. There are basically three categories of individual and team countermeasures:

(A) Planning countermeasures: essential for managing anticipated and unexpected threats;
(B) execution countermeasures: essential for error detection and error response;
(C) review countermeasures: essential for managing the changing conditions of a flight.

(iv) Enhanced TEM is the product of the combined use of systemic-based and individual and team countermeasures. Table 4 presents detailed examples of individual and team countermeasures. Further guidance on countermeasures can be found in the sample assessment guides for terminal training objectives (PANS-TRG, Chapter 3, Attachment B) as well as in the ICAO manual, Line Operations Safety Audit (LOSA) (Doc 9803).
### Planning countermeasures

| SOP briefing | The required briefing was interactive and operationally thorough | (A) Concise, not rushed, and met SOP requirements; (B) Bottom lines were established |
| Plans stated | Operational plans and decisions were communicated and acknowledged | Shared understanding about plans: 'Everybody on the same page' |
| Workload assignment | Roles and responsibilities were defined for normal and non-normal situations | Workload assignments were communicated and acknowledged |
| Contingency management | Crew members developed effective strategies to manage threats to safety | (A) Threats and their consequences were anticipated; (B) Used all available resources to manage threats |

### Execution countermeasures

| Monitor and cross-check | Crew members actively monitored and cross-checked systems and other crew members | Aircraft position, settings, and crew actions were verified |
| Workload management | Operational tasks were prioritised and properly managed to handle primary flight duties | (A) Avoided task fixation; (B) Did not allow work overload |
**DEPARTMENT OF CIVIL AVIATION**  
**MFCL ACCEPTABLE MEANS OF COMPLIANCE AND GUIDANCE MATERIAL**

| Automation management | Automation was properly managed to balance situational and workload requirements | (A) Automation setup was briefed to other members  
(B) Effective recovery techniques from automation anomalies |

Table 4. Examples of individual and team countermeasures

**AMC1 to Appendix 6   Modular training courses for the IR**

**ALL MODULAR FLYING TRAINING COURSES FOR THE IR, EXCEPT COMPETENCY-BASED MODULAR FLYING TRAINING COURSE**

(a) The theoretical knowledge instruction may be given at an ATO conducting theoretical knowledge instruction only, in which case the HT of that organisation should supervise that part of the course.

(b) The 150 hours of theoretical knowledge instruction can include classroom work, interactive video, slide or tape presentation, learning carrels, computer-based training, and other media as approved by the Authority, in suitable proportions. Approved distance learning (correspondence) courses may also be offered as part of the course.

**AMC2 to Appendix 6   Modular training courses for the IR**

**SECTION A IR (A)-MODULAR FLYING TRAINING COURSE**

**BASIC INSTRUMENT FLIGHT MODULE TRAINING COURSE**
(a) This 10 hours module is focused on the basics of flying by sole reference to instruments, including limited panel and unusual attitude recovery.

(b) All exercises may be performed in an FNPT I or II or an FFS, for a maximum of 5 hours. If instrument flight training is in VMC, a suitable means of simulating IMC for the student should be used.

(c) A BITD may be used for the exercises 1, 2, 3, 4, 6, and 8.

(d) The use of the BITD is subject to the following:

1. the training should be complemented by exercises on an aeroplane;
2. the record of the parameters of the flight must be available;
3. an FI (A) or IRI (A) should conduct the instruction.

EXERCISES
(e) Exercise 1:

1. basic instrument flying without external visual cues;
2. horizontal flight; power changes for acceleration or deceleration;
3. maintaining straight and level flight;
4. turns in level flight with 15 ° and 25 ° bank, left and right;
5. roll-out onto predetermined headings.

(f) Exercise 2:

1. repetition of exercise 1; 0:45 hours
2. additionally climbing, descending, maintaining heading and speed, transition to horizontal flight;
3. climbing and descending turns.

(g) Exercise 3:
Instrument pattern: 0:45 hours

(1) start exercise, decelerate to approach speed, flaps into approach configuration;

(2) initiate standard turn (left or right);

(3) roll out on opposite heading, maintain new heading for 1 minute;

(4) standard turn, gear down, descend 500 ft./min;

(5) roll out on initial heading, maintain descent (500 ft./min) and new heading for 1 minute;

(6) transition to horizontal flight, 1000 ft. below initial flight level;

(7) initiate go-around;

(8) climb at best rate of climb speed.

(h) Exercise 4:
Repetition of exercise 1 and steep turns with 45° bank; recovery from unusual attitudes. 0:45 hours

(i) Exercise 5:
Repetition of exercise 4. 0:45 hours

(j) Exercise 6:
(1) radio navigation using VOR, NDB 0:45 hours
or, if available, VDF;
(2) interception of predetermined QDM, QDR.

(k) Exercise 7:
Repetition of exercise 1 and recovery from unusual attitudes. 0:45 hours

(l) Exercise 8:
(1) Repetition of exercise 1; 0:45 hours

(2) turns, level change and recovery from unusual attitudes with simulated failure of the artificial horizon or directional gyro.

(m) Exercise 9:
Recognition of, and recovery from, hours incipient and full stalls.

(n) Exercise 10: Repetition of exercises 6, 8 and 9. 3:30 hours

Location and date:

Signature of head of training:

Type and number of license and state of issue:

Name(s) in capital letters of authorised instructor:

**AMC3 to Appendix 6  Modular training course for the IR**

**SECTION Aa IR (A) – COMPETENCY-BASED MODULAR FLYING TRAINING COURSE**

(a)  **THEORETICAL KNOWLEDGE INSTRUCTION**

(1)  The theoretical knowledge instruction may be given at an approved training organisation conducting theoretical knowledge instruction only, in which case the Head of Training of that organisation should supervise that part of the course.

(2)  The required theoretical knowledge instruction for the IR following the competency-based route may contain computer-based training, e-learning elements, interactive video, slide/tape presentation, learning carrels and other media as approved by the authority, in suitable proportions. Approved distance learning (correspondence) courses may also be offered as part of the course. The minimum amount of classroom teaching has to be provided as required by ORA.ATO.305.

(b)  **THEORETICAL KNOWLEDGE EXAMINATION**

The applicant for the IR following the competency-based training route should pass an examination to demonstrate a level of theoretical knowledge appropriate to the privileges granted in the subjects further detailed in MFCL.615 (b).
AMC4 to Appendix 6  Modular training courses for the IR

SECTION Aa IR (A) – COMPETENCY-BASED MODULAR FLYING TRAINING COURSE FLYING TRAINING

(a)  The instrument flight instruction outside an ATO provided by an IRI(A) or an FI(A) holding the privilege to provide training for the IR in accordance with Appendix 6 Section Aa (6)(a)(i)(A) may consist of instrument flight time under instruction or instrument ground time or a combination thereof.

TRAINING AIRCRAFT

(b)  The aeroplane used for the instrument flight training provided outside an ATO by an IRI (A) or FI (A) should be:

(1)  fitted with primary flight controls that are instantly accessible by both the student and the instructor (for example dual flight controls or a centre control stick). Swing-over flight controls should not be used; and

(2)  suitably equipped to simulate instrument meteorological conditions (IMC) and for the instrument flight training required.

(c)  The FSTD used for the instrument flight instruction provided outside an ATO by an IRI(A) or FI(A) should be suitably equipped to simulate instrument meteorological conditions (IMC) and for the instrument flight training required.

AMC5 to Appendix 6  Modular training courses for the IR

SECTION Aa IR (A) – COMPETENCY-BASED MODULAR FLYING TRAINING COURSE (6) (a) (i) (B); (6) (b) (i) (B)

PRIOR EXPERIENCE OF FLIGHT TIME UNDER IFR AS PIC

A rating giving privileges to fly under IFR and in IMC referred to in (6) (a) (i) (B) and (6) (b) (i) (B) may be any of the following:

(a)  an EIR rating issued by a competent authority of a Contracting State; or

(b)  a national instrument rating issued by a Contracting State prior to the application of MCAR-FCL; or

(c)  an instrument rating issued in compliance with the requirements of Annex 1 to the Chicago Convention by a third country; or

The amount of credit given should not exceed the amount of hours completed as instrument flight time.

AMC6 to Appendix 6  Modular training courses for the IR

SECTION Aa IR (A) – COMPETENCY-BASED MODULAR FLYING TRAINING COURSE (6) (a) (ii); (6) (b) (ii)
PRIOR INSTRUMENT FLIGHT TIME UNDER INSTRUCTION

Prior instrument flight time under instruction on aeroplanes, as referred in (6)(a)(ii) and (6) (b) (ii), may be instrument flight time completed for the issue of:

(a) an EIR rating issued by a competent authority of a Contracting State; or

(b) a national instrument rating prior to the application of MCAR-FCL

(c) an instrument rating in compliance with the requirements of Annex 1 to the Chicago Convention by a third country; or

AMC7 to Appendix 6 Modular training courses for the IR

SECTION Aa IR (A) – COMPETENCY-BASED MODULAR FLYING TRAINING COURSE (6) (c); (6) (d)

PRE-ENTRY ASSESSMENT AND TRAINING RECORD

(a) PRE-ENTRY ASSESSMENT

The assessment to establish the amount of training to be credited and to identify the training needs should be based on the training syllabus established in Appendix 6 Aa.

(b) TRAINING RECORD

(1) Before initiating the assessment the applicant should provide to an ATO a training record containing the details of the previous flight instruction provided by the IRI (A) or the FI (A). This training record should at least specify the aircraft type and registration used for the training, the number of flights and the total amount of instrument time under instruction. It should also specify all the exercises completed during the training by using the syllabus contained in Appendix 6 Aa.

(2) The instructor having provided the training should keep the training records containing all the details of the flight training given for a period of at least 5 years after the completion of the training.

AMC 8 to Appendix 6 Modular training courses for the IR

SECTION Aa IR (A) – COMPETENCY-BASED MODULAR FLYING TRAINING COURSE (8)

In order to be credited in full towards the multi-engine IR (A) training course requirements, the applicant should

(a) hold a multi-engine IR(A), issued in accordance with the requirements of Annex 1 to the Chicago Convention by a third country;

(b) have the minimum experience required in Appendix 6 Aa paragraph 8(c), of which...
at least 15 hours should be completed in a multi-engine aeroplane

AMC 9 to Appendix 6   Modular training courses for the IR

AIRSHIPS

BASIC INSTRUMENT FLIGHT MODULE TRAINING COURSE

(a) This 10 hours module is focused on the basics of flying by sole reference to instruments, including limited panel and unusual attitude recovery.

(b) All exercises may be performed in an FNPT I or II or an FFS, for a maximum of 5 hours. If instrument flight training is in VMC, a suitable means of simulating IMC for the student should be used.

(c) A BITD may be used for the exercises 1, 2, 3, 4, 6 and 8.

(d) The use of the BITD is subject to the following:

(1) the training should be complemented by exercises on an airship;

(2) the record of the parameters of the flight must be available;

(3) an FI (As) or IRI (As) should conduct the instruction.

EXERCISES

(e) Exercise 1:

(1) basic instrument flying without external visual cues; 0:30 hours

(2) horizontal flight;

(3) maintaining straight and level flight;

(4) turns in level flight, left and right;

(5) rollout onto predetermined headings.

(f) Exercise 2:

(1) Repetition of exercise 1; additionally climbing and Descending 0:45 hours

(2) maintaining heading and speed;
(3) transition to horizontal flight;
(4) climbing and descending turns.

(g) Exercise 3:

Instrument pattern: 0:45 hours

(1) start exercise, decelerate to approach speed,

(2) initiate standard turn (left or right);

(3) rollout on opposite heading, maintain new heading for 1 minute;

(4) standard turn, descend with given rate (for example 500 ft. /min);

(5) rollout on initial heading, maintain descent (for example 500 ft. /min) and new heading for 1 minute;

(6) transition to horizontal flight (for example 1000 ft. below initial level);

(7) initiate go-around;

(8) climb at best rate of climb speed.

Exercise 4:

(1) repetition of exercise 1; 0:45 hours

(2) recovery from unusual attitudes.

Exercise 5

Repetition of exercise 4. 0:45 hours
Exercise 6

- (1) radio navigation using VOR, NDB or, if available, VDF; 0:45 hours
- (2) interception of predetermined QDM,

Exercise 7

- (1) repetition of exercise 1; 0:45 hours
- (2) recovery from unusual attitudes.

Exercise 8

- (1) repetition of exercise 1; 0:45 hours
- (2) turns, level change and recovery from unusual attitudes with simulated failure of the artificial horizon or directional gyro.

(h) Exercise 9

Repetition of exercises (6) and (8). 4:15 hours
